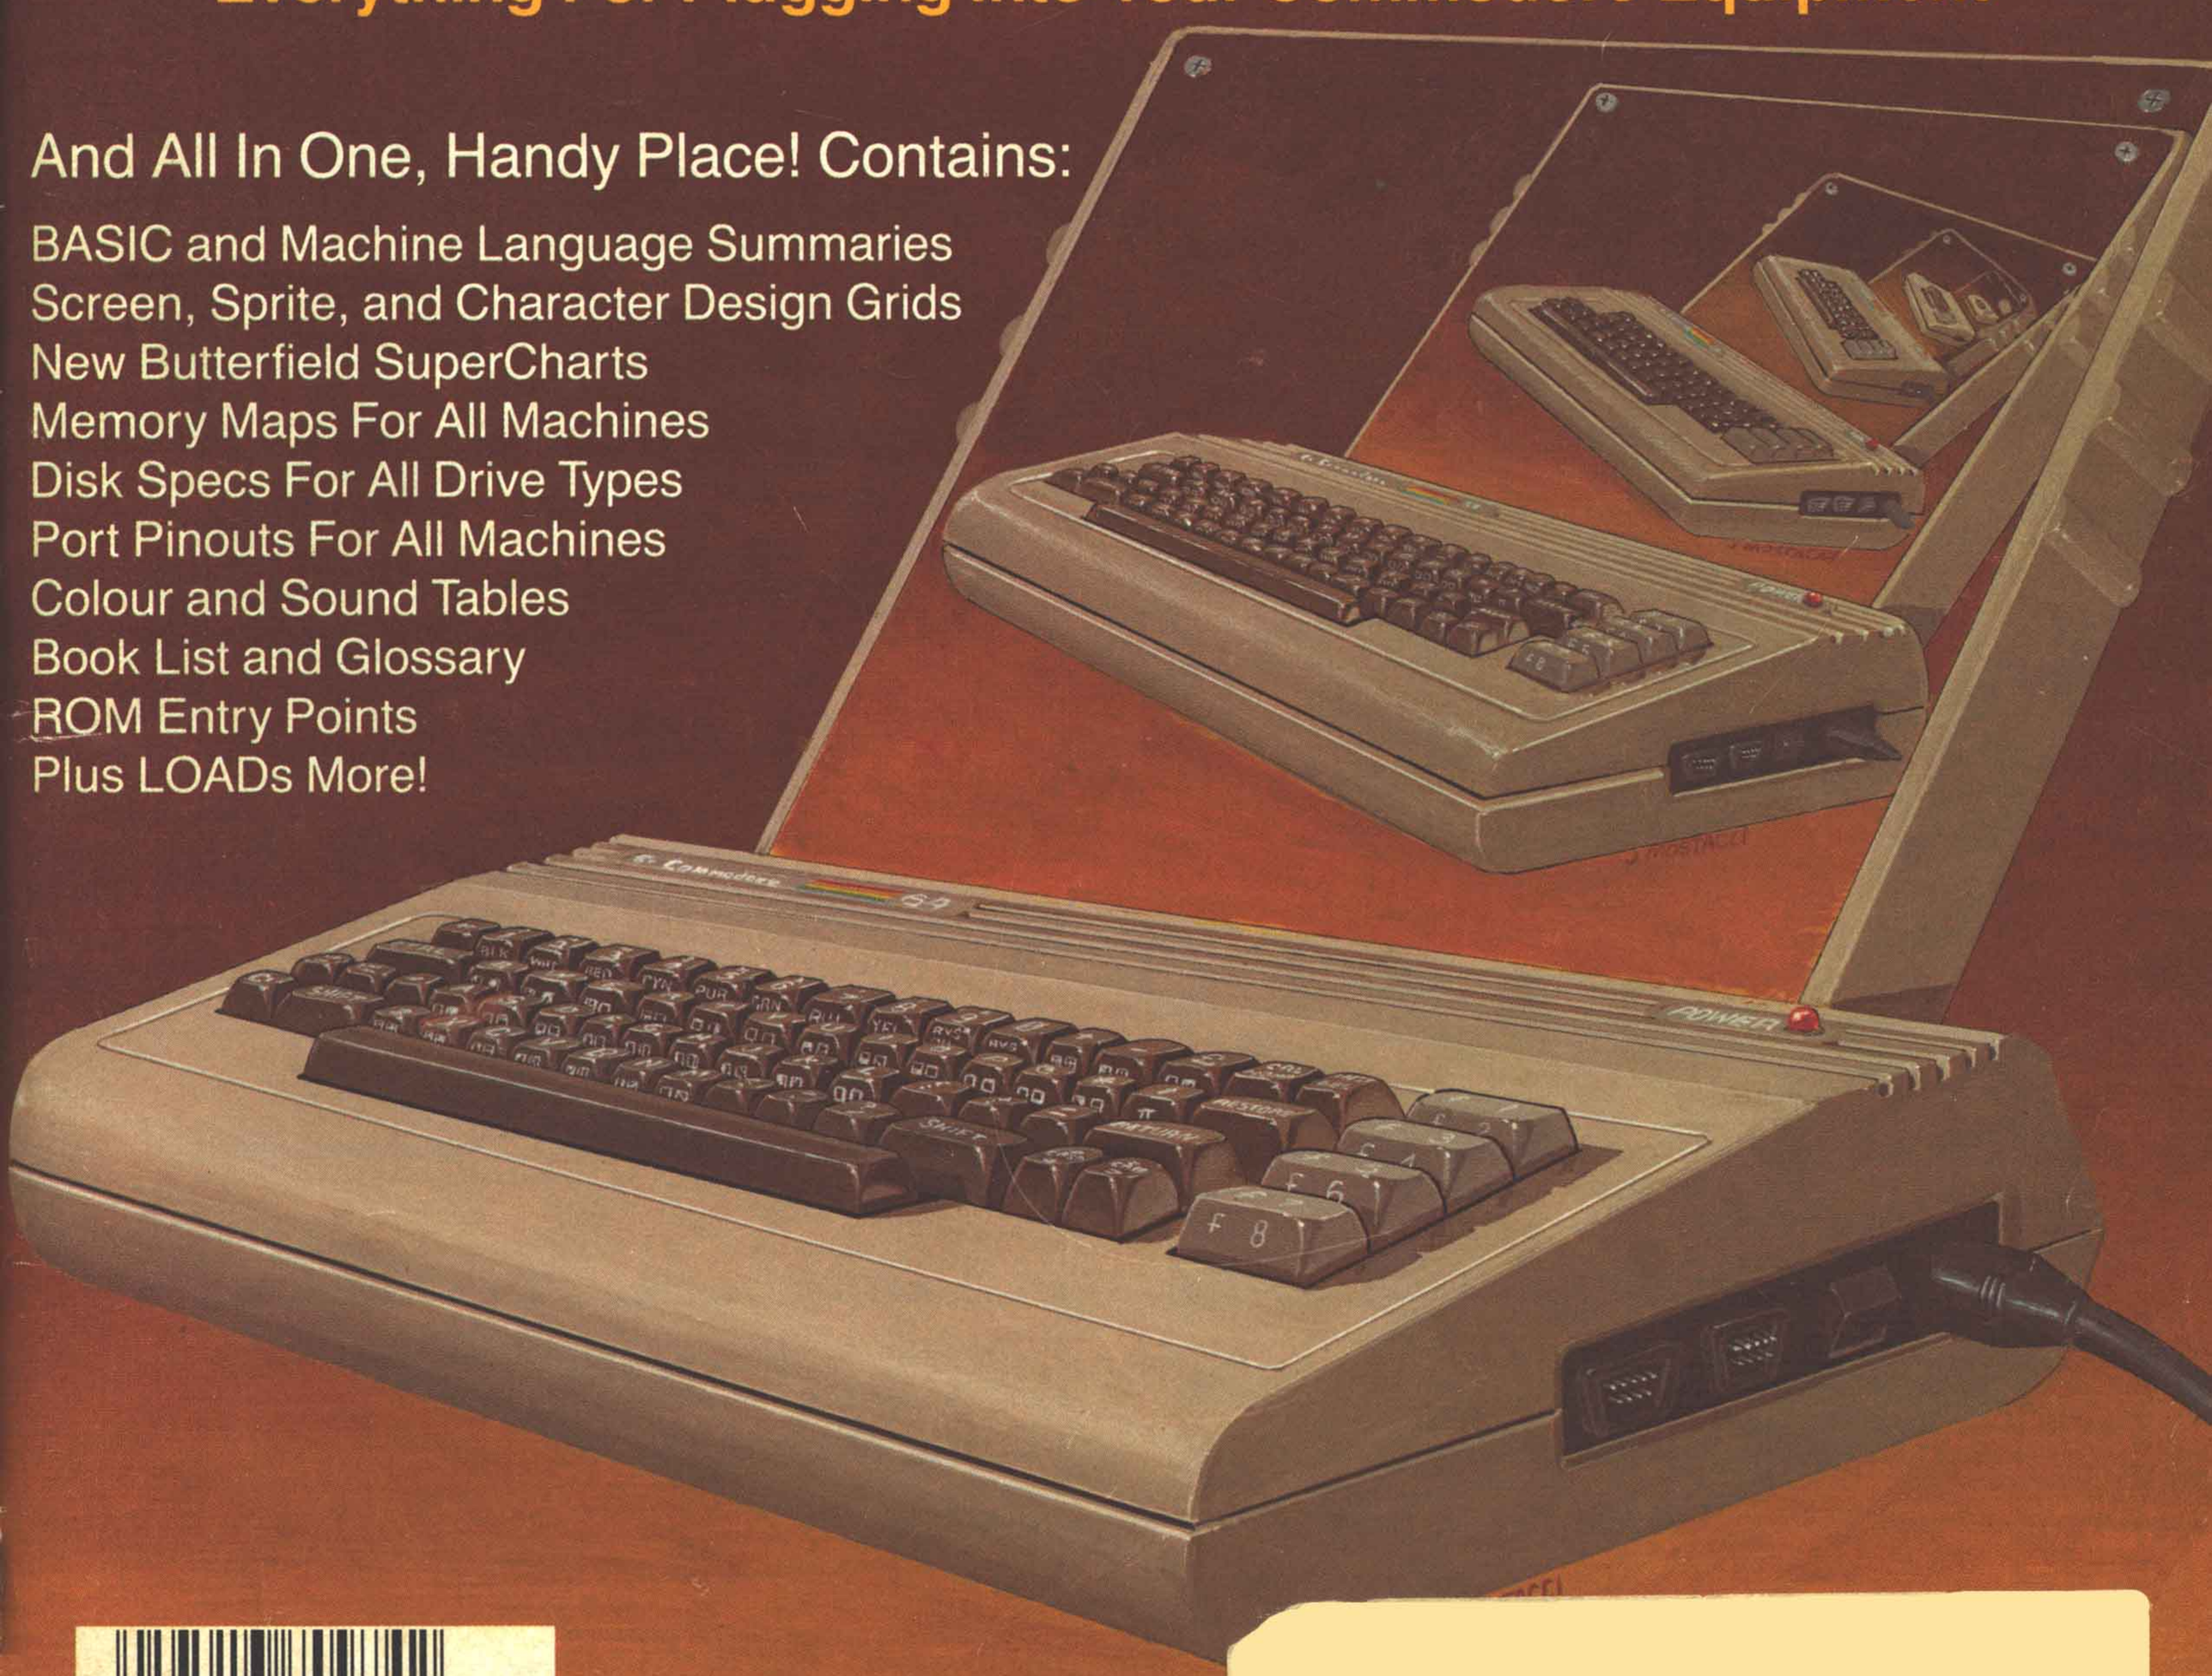
Everything For Plugging Into Your Commodore Equipment



And All In One, Handy Place! Contains:

- BASIC and Machine Language Summaries
- Screen, Sprite, and Character Design Grids
- New Butterfield SuperCharts
- Memory Maps For All Machines
- Disk Specs For All Drive Types
- Port Pinouts For All Machines
- Colour and Sound Tables
- Book List and Glossary
- ROM Entry Points
- Plus LOADs More!

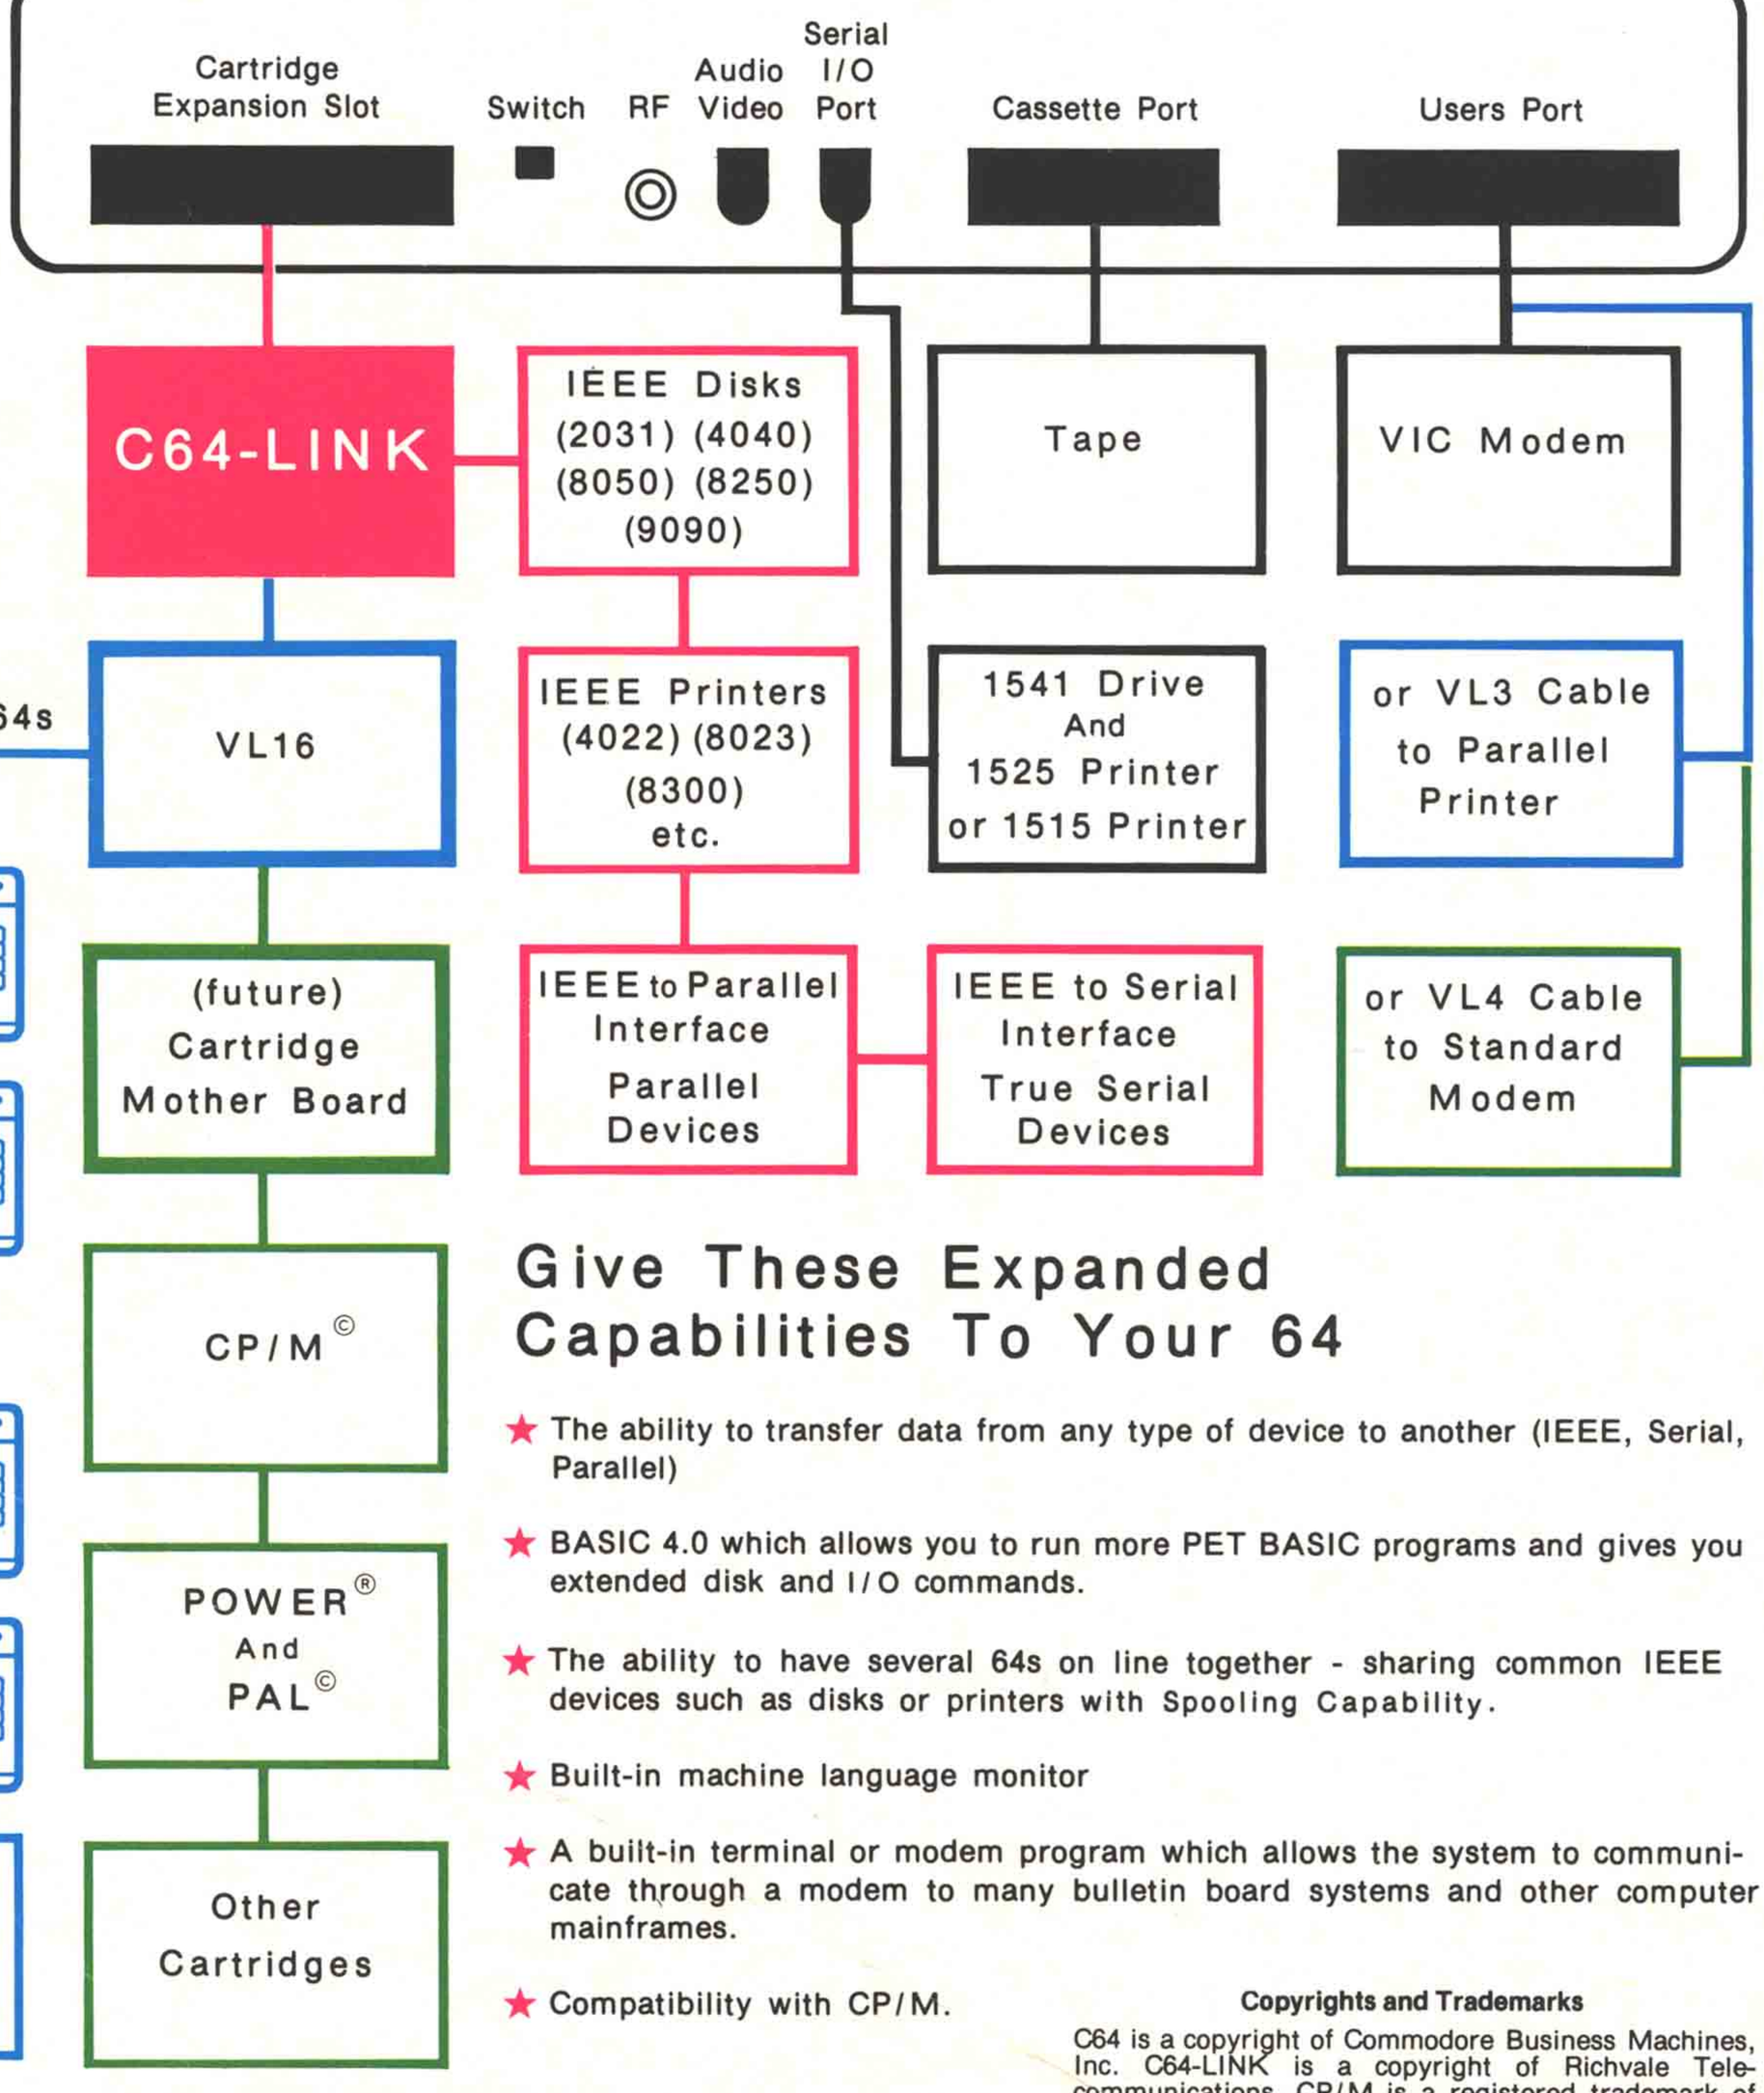
RTC RTC



Give These Expanded Capabilities To Your 64

★ The ability to transfer data from any type of device to another (IEEE, Serial, Parallel)

★ BASIC 4.0 which allows you to run more PET BASIC programs and gives you extended disk and I/O commands.

★ The ability to have several 64s on line together - sharing common IEEE devices such as disks or printers with Spooling Capability.

★ Built-in machine language monitor

★ A built-in terminal or modem program which allows the system to communicate through a modem to many bulletin board systems and other computer mainframes.

★ Compatibility with CP/M.

Contact your local Commodore dealer or RTC.

Program Listings In The Transactor

All programs listed in The Transactor will appear as they would on your screen in Upper/Lower case mode. To clarify two potential character mix-ups, zeroes will appear as '0' and the letter "o" will of course be in lower case. Secondly, the lower case L ('l') has a flat top as opposed to the number 1 which has an angled top.

Many programs will contain reverse video characters that represent cursor movements, colours, or function keys. These will also be shown exactly as they would appear on your screen, but they're listed here for reference.

Occasionally programs will contain lines that show consecutive spaces. Often the number of spaces you insert will not be critical to correct operation of the program. When it is, the required number of spaces will be shown. For example:

print" flush right" – would be shown as – print"[space10]flush right"

Cursor Characters For PET / CBM / VIC / 64

Down	– q	Insert	– T
Up	– Q	Delete	– t
Right	–]	Clear Scrn	– S
Left	– [Lft]	Home	– s
RVS	– r	STOP	– c
RVS Off	– R		

Colour Characters For VIC / 64

Black	– P	Orange	– A
White	– e	Brown	– U
Red	– £	Lt. Red	– V
Cyan	– [Cyn]	Grey 1	– W
Purple	– [Pur]	Grey 2	– X
Green	– ↑	Lt. Green	– Y
Blue	– ←	Lt. Blue	– Z
Yellow	– [Yel]	Grey 3	– [Gr3]

Function Keys For VIC / 64

F1	– E	F5	– G
F2	– I	F6	– K
F3	– F	F7	– H
F4	– J	F8	– L

Want to advertise a product or service? Call or write for more information.

Editorial contributions are always welcome and will appear in the issue immediately following receipt. Remuneration is $20 per printed page. Preferred media is 2031, 4040, 8050, or 8250 diskettes with WordPro, WordCraft, Superscript, or SEQ text files. Program listings over 25 lines should be provided on disk or tape. Manuscripts should be typewritten, double spaced, with special characters or formats clearly marked. Photos of authors or equipment, and illustrations will be included with articles depending on quality. Diskettes, tapes and/or photos will be returned on request.

From The Editor's Desk

Infolution

That's right. Infolution - the evolution of information. Or is that revolution of information. In 1977 (here I go again) when Commodore first released the PET, there was virtually no information available. Then as more questions were asked, more material was generated. Soon there was enough to get by, and after three years plenty for most purposes. But it was scattered and I found myself carrying 20 pounds of stuff around to have maybe 20 pages of it with me. So in 1980, The Transactor released the first Reference Issue, Volume 2, Issue 7.

History repeats itself. When I noticed my briefcase was splitting at the seams, I figured it was time. It would have to be complete, accurate, tidy, and most of all, handy. But in the past 6 years, a lot has been covered, and re-uniting it all into a compact unit would prove to be some task.

Somewhere in the neighbourhood of 2000 hours was spent on this orb. Usually an issue takes about 1 1/2 of the typesetters' 8" disks. This time 6 of them were completely filled. But this one makes the last one typeset by yours truly. Hopefully this will shave some time off our cycle.

You will notice a certain amount of duplicated material as you flip through for the first time. Quite intentional... and the reasons will become more apparent as you use it more. For example, you'll find machine language op-code values presented in at least three spots. Each has its own purpose in life. Butterfield's SuperCharts show the relationship between values as they're interpreted by ASCII, BASIC, the screen, and the microprocessor. I find this chart is most useful when trying to decipher someone elses work (and also anything of my own that's over three months old).

When I'm writing new code, I usually have the 6502 Summary at hand. Alphabetical order makes the instruction I need easier to find, plus the applicable addressing modes and affected status register bits are the kind of information one must have under such circumstances.

The op-code hex values appear again in a rather handy wallet-size chart drafted some years ago by Jim Butterfield. However, if you look between the lines on this one, you'll see a pattern. It was this chart that first introduced me to the structure of the 6502's internal architecture. Notice how 90% of the instructions have been given very deliberate values, not just arbitrary.

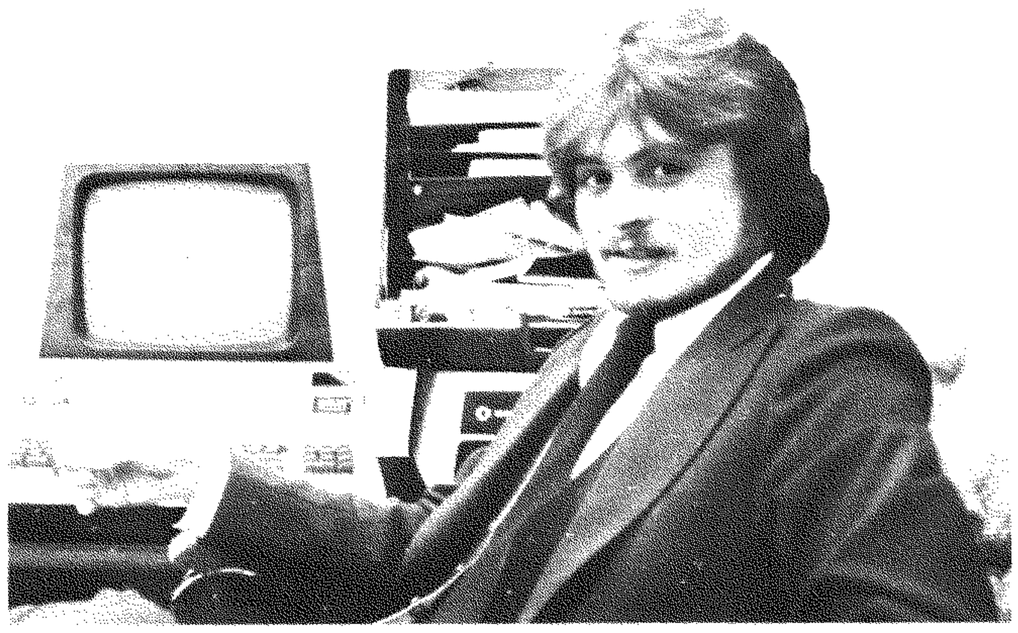
Further on the above, the Reference Issue has been assembled with a "same page" philosophy. I admit the characters are a bit small in places, but I find the inconvenience of flipping pages is worth the tradeoff.

Once again I salute Jim Butterfield, the man responsible for all those memory maps and other stuff. The hours of trouble he has saved us all could easily be measured in lifetimes. By the way, we still have copies leftover of Issue 02 featuring a centerfold of the man himself... and in fine form, I might add.

Last, I should point out that this issue was designed to consolidate the most frequently used information. It is by no means a total guide. For more details on the material presented here, you should consider the 'VIC 20 Programmers Reference Guide', the 'Commodore 64 Programmers Reference Guide' (both from Commodore), or 'Programming The PET/CBM' by Raeto West (published by Compute). All 4 would make a truly complete anthology.

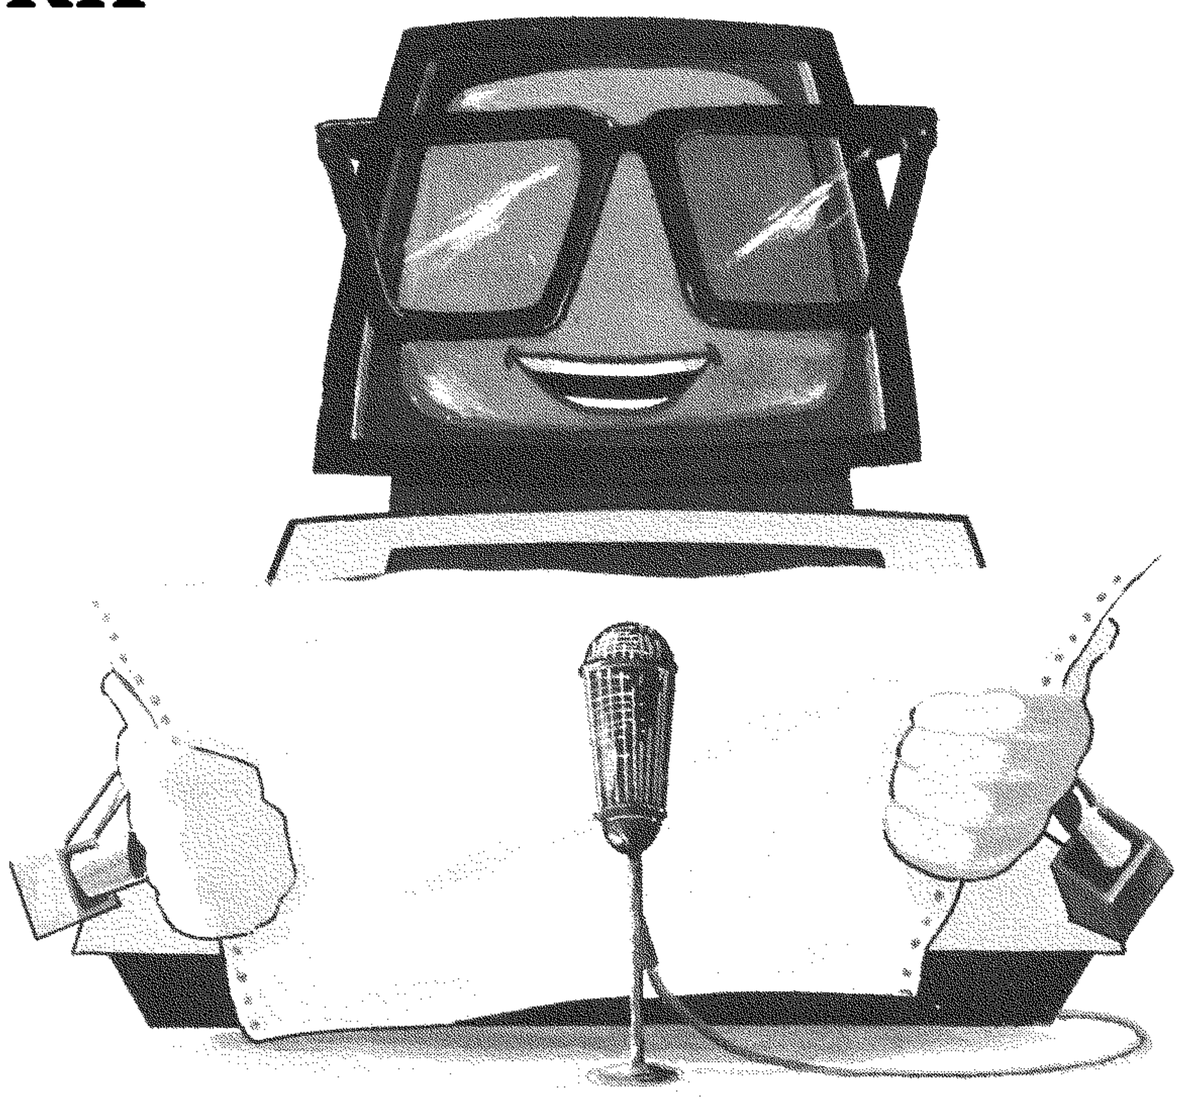
And in closing... this issue marks our debut on the newsstand in Canada - we printed 16,000 to meet orders, more than in all of 1979 and '80. And now that typesetting detail is being farmed out, Richard Evers, new full-time Editor, and myself can concentrate on cranking out files instead of film. More writers, articles, circulation, and faster production is now on top of the priorities list. We're paying more now too, call us.

No longer Editor, no longer typesetter, I remain,



Karl J.H. Hildon
Managing Editor, The Transactor

News BRK



The Transactor Adds New Employees And New Features

Richard Evers is now full-time Editor of The Transactor and Karl Hildon moves to the Managing Editors' spot. Both Richard and Karl will continue working on article production. Adding to the traditionally advanced technical content of The Transactor will be more material at the beginner and intermediate levels. This does not mean that advanced level material will be reduced, simply that beginner and intermediate will be increased. This will help broaden the reader base of The Transactor and ultimately lead to increases at ALL levels.

Renewal Time

For many subscribers, this will be the last issue posted against their subscription since The Transactor became independent in November 1982. This notice applies mostly to those that sent less than $15 towards a subscription. If you are one of them, your mailing label will show an asterisk (*) at the top right corner.

If you subscribed starting with Issue 01 and sent the right amount, your last issue will be the next one, Issue 06. However, the postage-free subscription card will NOT be run next issue, so take advantage now. Please indicate 'Renewal' on the card.

No More 04's

Unfortunately, we have run out of Volume 4, Issue 04. Yes, for the first time, we plain ran out! If there is enough demand, we'll print more, but those ordering new subscriptions should consider Issue 05 as their first copy.

Prices in US. Dollars

Lately we've run a couple of ads that show prices with no indication of their currency, ie. Canadian or US. dollars. If the ad has been placed by a firm with a US. address, it should be assumed that the prices are in US. dollars. In future we'll attempt to clarify any ads that don't specify.

COMAL For The 64 Now Public Domain

As of September 30/1983, COMAL for the Commodore 64 has been free public domain software. COMAL was originally written for the PET/CBM. This new rendition has several improvements including commands for controlling colour, sound, and turtle graphics. Best of all, it's free. Contact your club librarian about obtaining copies.

'Home Accountant' and 'Tax Advantage' for C64

Continental Software of Los Angeles, California, in conjunction with their recently appointed marketing firm, South Western Publishing Co., has announced the release of two of their current best selling programs, 'The Home Accountant' and 'The Tax Advantage', for the educational environment. Rewritten specifically for the junior high schools, high schools, universities and adult education classes, the packages all come complete with diskettes, users manuals, teachers manual and test forms. For more information contact:

Hank Scheinberg/Denny Mosier
Continental Software
11223 South Hindry Avenue

Las Vegas Style Gambling On The C64

Advanced Microware has announced the release of their latest effort for the C64, CASINO PAC. It includes four games - Blackjack, Poker, Keno and Slot Machine, and each is said to be accurate simulations of the video game machines currently in use in Las Vega, Reno and Atlantic City. Available on tape or disk for $39.00 US.

Also available is 64TOUR, a demonstration program of the capabilities of the C64. These include High Resolution Graphics, Music and Sound Effects. Priced at $12.00 US. For more information please contact:

Advanced Microware

The Grade Manager

'The Grade Manager', for the Vic-20 and the Commodore 64 computers, will alphabetically sort student lists, keep track of assignments, weights, grades, and calculate averages for an entire term. It will report, to TV or printer, assignment summaries, student grades and averages, and incomplete assignments. Available on both cassette and diskette, the disk version is menu driven. For use with the Vic-20, 8K memory expansion is required. Prices are $29.95 US for tape and $34.95 US for disk. For more info, contact

Smokey Mountain Software
54 West Main Street
Brevard, NC
28712 (704) 883-2595

Two New Sports Strategy Games For The VIC 20

Parr Programming, of Gary, Indiana, has produced the first two in a series of Sports Adversary Games for the Vic 20. The first is the Baseball Adversary. With you in the managerial position against your computer, this game allows for additional players on the bench for pinch hitting and relief pitching and is written to not allow your adversary, the computer, any unfair advantage. Control of the game is through the keyboard. Available on cassette and requiring no memory expansion, the price is $10.95 US.

The Football Adversary is the final in this series of two. You are put in the role of head coach, with features being a selection of 31 plays and a display of halftime/game statistics. Available on cassette, and also using keyboard control, the price is $14.95 US.

Accounts Receivable Program For The C64

Written by Microspec Inc. of Plano, Texas, this program will support up to 150 customers per diskette on a balance forward system that will accommodate 18 transactions per customer for each posting period. Complete aged reports are generated and automatically posted to Microspecs General Ledger program. The price for this program is $99.95 US. with more information available from:

Laura Robinson
Communications Plus
301 S. Sherman
Suite 117
Richardson, Texas
75081 (214) 783-8543

Allow Your Vic or C64 To Balance Your Chequebook

Microspec of Plano Texas, in its never ending quest for further C64 and Vic 20 programs, has released the 'Checkbook Manager'. Available for both the C64 and Vic 20, each appear to offer a solution to the problem of keeping your chequebook in order. Able to track all outstanding cheques, reconsile monthly financial statement, and track expenses on a quarterly and year-to-data basis, the limit only appears to be the capacity of the version purchased. The Vic 20 version offers ten less categories than that of the C64. The price is $69.95 US for the C64 version, and $49.95 US for the Vic 20. For further information please contact Communications Plus (above).

'Power 64' Available For The Commodore 64

In the past we have all come to know and love the features of Power for our Commodore computers. But with the advent of the Commodore 64, a loss has been felt. After being spoiled by Power, BASIC programming has suddenly become a chore. No longer must this be, for Brad Templeton has re-written his utility for the C64.

In case you have never heard of Power, the following are some of the features it has to offer.

- automatic line numbering and re-numbering
- complete tracing functions
- single stepping through programs
- definition of keys as BASIC keywords
- de-bugging ease with a ẅhy˜command
- addition of auto repeat function to cursor keys
- ability to merge BASIC programs
- listing and scrolling up and down of BASIC programs in memory
- hexadecimal and decimal conversions
- and much, much more

The documentation included, written by Jim Butterfield, is very helpfull in all aspects and leaves nothing to the imagination. For a total price of $99.95 Cdn., the benefits shown will be worth the cost involved. For more contact:

Pro-Line Software Ltd.
755 The Queensway East, Unit 8

The MANAGER Column

Don Bell & Alex Gaul
Milton, Ontario

In this issue, the Manager column is devoted to the first part of a hands-on application for the '64 MANAGER - a Christmas card and gift list. The second part of this article will appear in the next issue. Subsequent issues will provide more easy to follow hands-on applications for home and business as well as tips for advanced users including "Re--Field' by Eric Armson, a routine you add to Create/Revise that re-orders field entry. - Ed.

A '64 MANAGER Gift List

HUMBUG! It's that time of year again. I staggered up the stairs from the basement dragging the box of old Christmas junk accumulated over years of neglect. Then after a stiff drink, I screwed up enough courage to open it. YUK! Krinkled tinsel, tangled Christmas tree lights, broken decorations, horrible-looking holly, musty mistletoe (smelling of old kisses), petrified candy canes and at the bottom, boxes of last year's Christmas cards. Cheer up, the worst is yet to come!

Then, like a memory of a NEW Year's Day hangover, it suddenly hit me! How am I going to cope with the Christmas cards, gifts, and party again this year? There's a number of people I'd like to 'edit' from my list but I can never remember whether they sent me a card or a gift last year. (I'd prefer not to expose myself as an incompetent who can't even master a Christmas card list.) Usually what happens is I send them a card one year, they send me one the next... and so on. It's as though each of us wants to send the last missile... I mean card. Then what to do about gifts - especially those useless token gifts to appease distant relatives. I've got enough socks & ties to dress a herd of caribou and enough after-shave lotion to bathe in. I'd trade it all for one good Darth Vader video game. It gets down to a matter of how much to spend - an equation - whatever they spend I have to spend. Boring! Then who to invite to the party? How to avoid inviting people who mix like sharks and jellyfish. How will I get through it all again without losing my mind?.

HARK! This year I decided there had to be a better way. I want to get rid of the worry, the planning, the strain on my old memory bank and get back some real Christmas cheer, brouhaha, whatever it was that made old Scrooge want to click his heels on Christmas Day. Taking my cue from a business associate of mine who is ecstatic over his new computer system, I decided to try my hand at solving my problem using THE '64 MANAGER.

Very slowly and carefully I will show you the steps I took creating my Christmas List file. You will be able to easily keep track of cards, gifts, parties, money spent, and other Christmas information. You will be able to generate numerous useful reports that would be difficult or impossible to create without it. All of this is directed towards helping you better organize yourself, so that you will have more time to experience the real joys of Christmas.

LOADing The Program

Turn on your 64, monitor and disk drive.
Insert your Manager disk in the drive
Type: load "64.manager", 8 press 'return'.
When the cursor reappears, type in 'run' and press 'return'.
After a few minutes, a menu comes up on the screen and you are ready to start.

Formatting A Diskette

The first thing you must do is "format" a blank diskette, ie. prepare it so it can receive data. Press 'f' to format a disk. The computer will load the format program from the disk. When the computer has finished loading, remove THE MANAGER diskette and insert your blank data diskette into the drive. Follow the screen instructions and you will have a formated disk.

Getting Started In The CREATE/REVISE Option

When the main menu appears, press 'c' for create/revise. This option lets you draw a form on the screen and revise it later if you choose. The first screen prompt is 'filename?'. I called my file 'xmas list'. Enter any filename you want (preferably one that reminds you of the file) and press 'return'. The next screen prompt is 'create using an existing screen (y/n)?'. Enter 'n' as you do not have an existing screen.

Selecting Screen Colours

Since this is a Christmas List and not an accounting application, you can choose any wild, cheerful colours you wish for your screen.

The system will now prompt:

ENTER BORDER COLOUR?
ENTER BACKGROUND COLOUR?
ENTER CURSOR COLOUR?

For each prompt select a colourr by pressing 'CTRL' and a number key with a colour name on its side, OR, 'Commodore KEY' and a number key with a colour name on its side

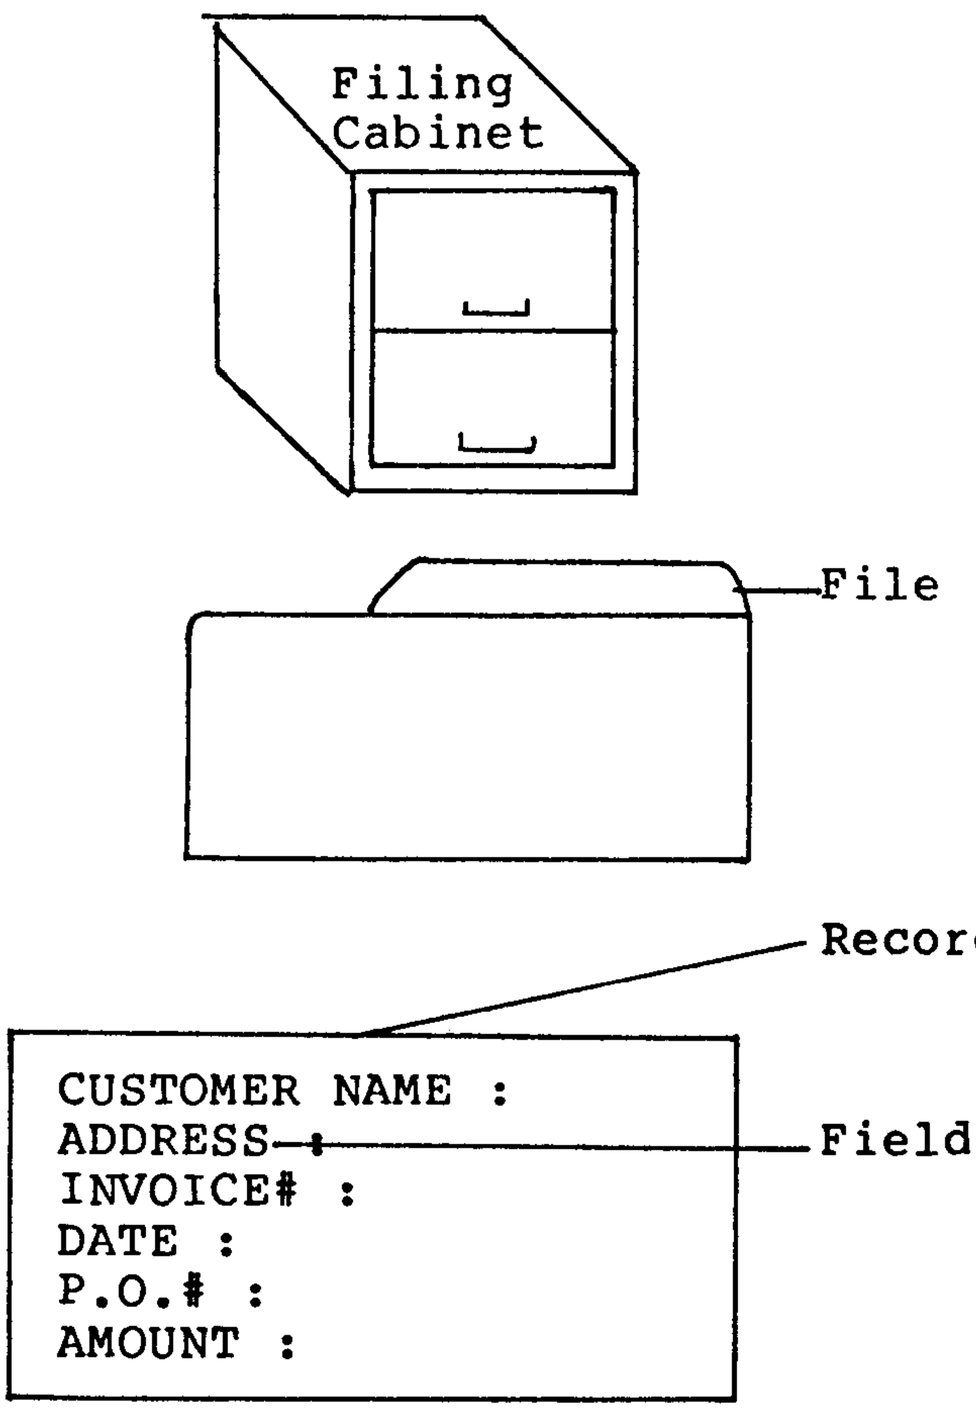
Note that if you chose a black background with black border and black cursor nothing would appear on the screen. This can be remedied by choosing a light cursor colour ie. white or yellow. Refer to the instruction manual that came with your 64 for further details.

Designing A Form For Your Christmas List Data

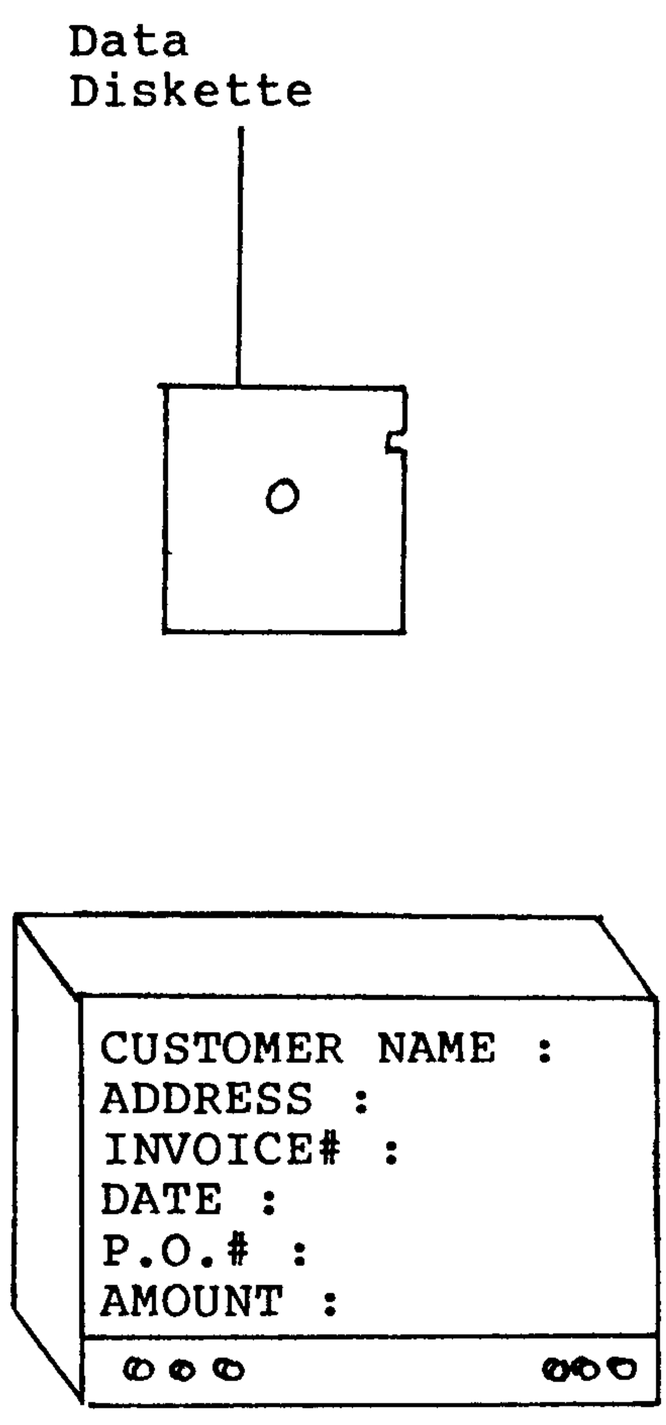
After choosing your screen colours and pressing 'return', your screen will be cleared except for the bottom line where it will say screen '1 of 1' and 'L1 C1'. This means that you are on screen 1 and your cursor is on line 1 column 1. You can now create a screen for your Christmas list.

Picture a file folder filled with blank pieces of paper. The file folder is really our empty data diskette and the blank pieces of paper are blank screens with nothing on them. You are now going to create 'forms' out of the blank pieces of paper.

MANUAL FILING SYSTEM



'64 MANAGER FILING SYSTEM



Picture a 'form' with titles and boxes to fill in. The top of a job application, similar to the one below, may help you visualize a form.

JOB APPLICATION FORM

NAME : _____

ADDRESS : _____

Notice that a form has titles or prompts followed by specific areas in which to enter information. We are going to use a form for entering information in our Christmas List.

Using the screen as a blank piece of paper, you will now design a form that accomodates all the information you need to know about a person on your Christmas List. When you are finished it may resemble the screen below. Each '↑' indicates the beginning and end of a box or field of information. The 'π' represents a field that will only need 1 character of information.

CHRISTMAS LIST '83

```
NAME          ↑                              ↑  M/F π

```

I will start you off with title of the page and the 'NAME' entry and you can design the rest of the form yourself. Cursor over to column 14 line 1, type 'CHRISTMAS LIST '83, then press 'return'. You will now be on line 2 column 1. Press return again to get to row 3. Now cursor over to column 4 (3 spaces) and type in 'NAME'. This is the first title (or screen prompt) for the first field in your form. Now you are going to indicate the field size. While holding the CONTROL key down, press 'f'. After releasing the keys the prompt 'LENGTH?' will appear on the bottom line. The program will accept numbers between 1 and 30 for the length of the field. In our case, we have chosen 20 characters as the length of the 'name' field. Enter '20' and press 'return'. You will notice that this command will leave two ↑'s to indicate where the field is. The length of the field on the screen includes the two ↑'s. (The ↑'s may also be keyed in directly, but you will have to count the field length yourself. Be sure to include the ↑'s in your field count.)

In a similar manner to the above, fill in the rest of the form repeating the 3 steps below for each piece of information.

1. Decide on a specific piece of information you want included on the form. (Information such as name, address, phone, whether you want to send them a card or gift, etc.)

2. At a suitable spot on the screen, enter a title or prompt for that piece of information to be input, eg. "NAME" prompts the user to input a name. There must be sufficient room on the right side of the prompt to enter the required information.

3. Specify the maximum number of letters or characters that can be input into the field following the title or prompt. This is done by holding the control key down and pressing 'f', entering a number for the field length, then pressing 'return'. (A single character field will show a 'π' sign, fields greater than 1 character are represented by ↑'s at the precise beginning and end of the field.)

Repeat the three steps above again and again until you have all the information you want on the form. After you have entered all the prompts and fields in the form, you may want to pause to consider the overall design of the form. Only you can decide on what is a pleasing layout. It should be clear and easy to read. Revisions may be made now or later using the 'CREATE/REVISE' option. Once you have started entering data in the 'ENTER/EDIT' option, you may NOT change the size of the fields. Our sample will give you an idea of what kinds of information you may want to store and how to lay it out. The numbers stand for the maximum number of letters or characters that may be entered in a field or information box.

Saving The Screen

After you have finished designing the form on the screen and you are sure it is correct, press the 'left arrow' key. The screen will then prompt you with 'ARE YOU SURE?'. Enter

'y' and press 'return'. The program will check to see if all fields are closed (fields longer than 1 character must have a pair of ↑'s. If there is an error, you will be prompted to change the field entry.

Next the screen will prompt 'Another Screen?'. In our case we will enter 'n' and press 'return'. Then the screen will prompt 'Do you wish to alter field types?' this is to change between an alpha field ie. letters of the alphabet and numeric fields ie. numbers. As we do not really have any purely numeric fields, we will leave all the fields the same by entering 'n' and 'return'.

Deciding On The Number Of Records For Your File

Now place the data disk you previously formatted into the disk drive after removing the manager disk. The screen will prompt you with 'Rec Len XXXX, Max No of Rec XXXX' at the bottom of the screen and asks 'OK?'. Enter 'y' and 'return'. Then the screen will prompt 'Rec Len,# of records' at which point you can accept the number of records displayed by pressing 'return' or enter your own number of records (up to about 300) and press 'return'. The computer will then go to the disk and create a file large enough to handle all the records you asked for. As this process will take some time, you may want to go to the kitchen for a snack.

Entering Individual Records In Your File

Now you may enter the individual records for people on your Christmas List using the form you have just designed on the screen. Choose 'Enter/Edit' on the main menu. In this option you may enter, change, delete and search for records of individual people in your Christmas List. (More advanced commands will be discussed in future articles.) For each person on your Christmas List, complete a screen form with the following steps:

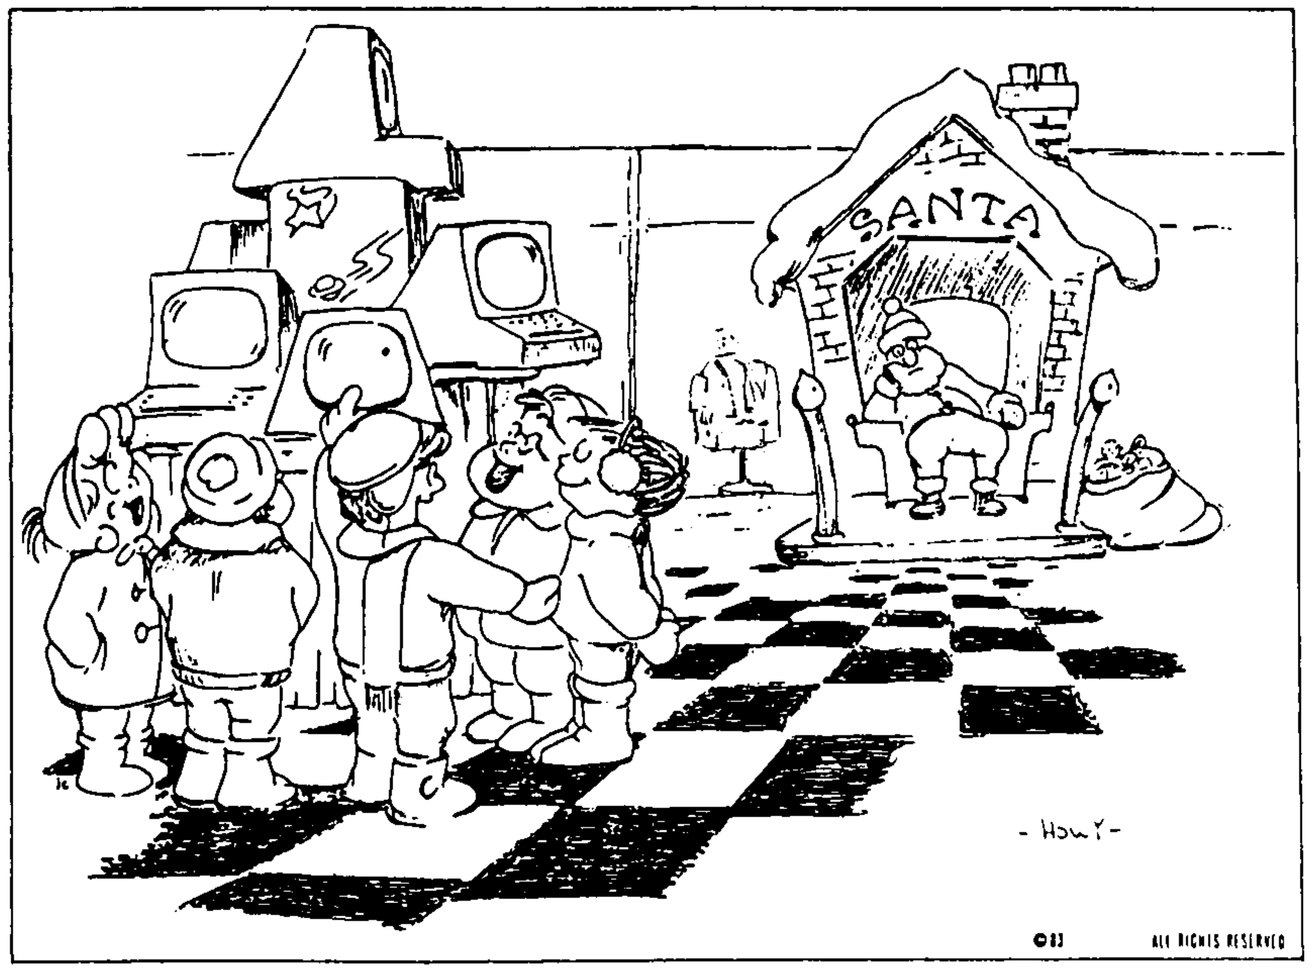
1. Press 'e' to enter a record;
2. Fill in the blank fields, pressing 'return' after each entry;
3. Press ← to save the record. When you have entered a record for every person on your Christmas list, press F1 to return to the main menu. The screen will prompt 'Are you sure (y/n)?', enter 'y', 'return'.

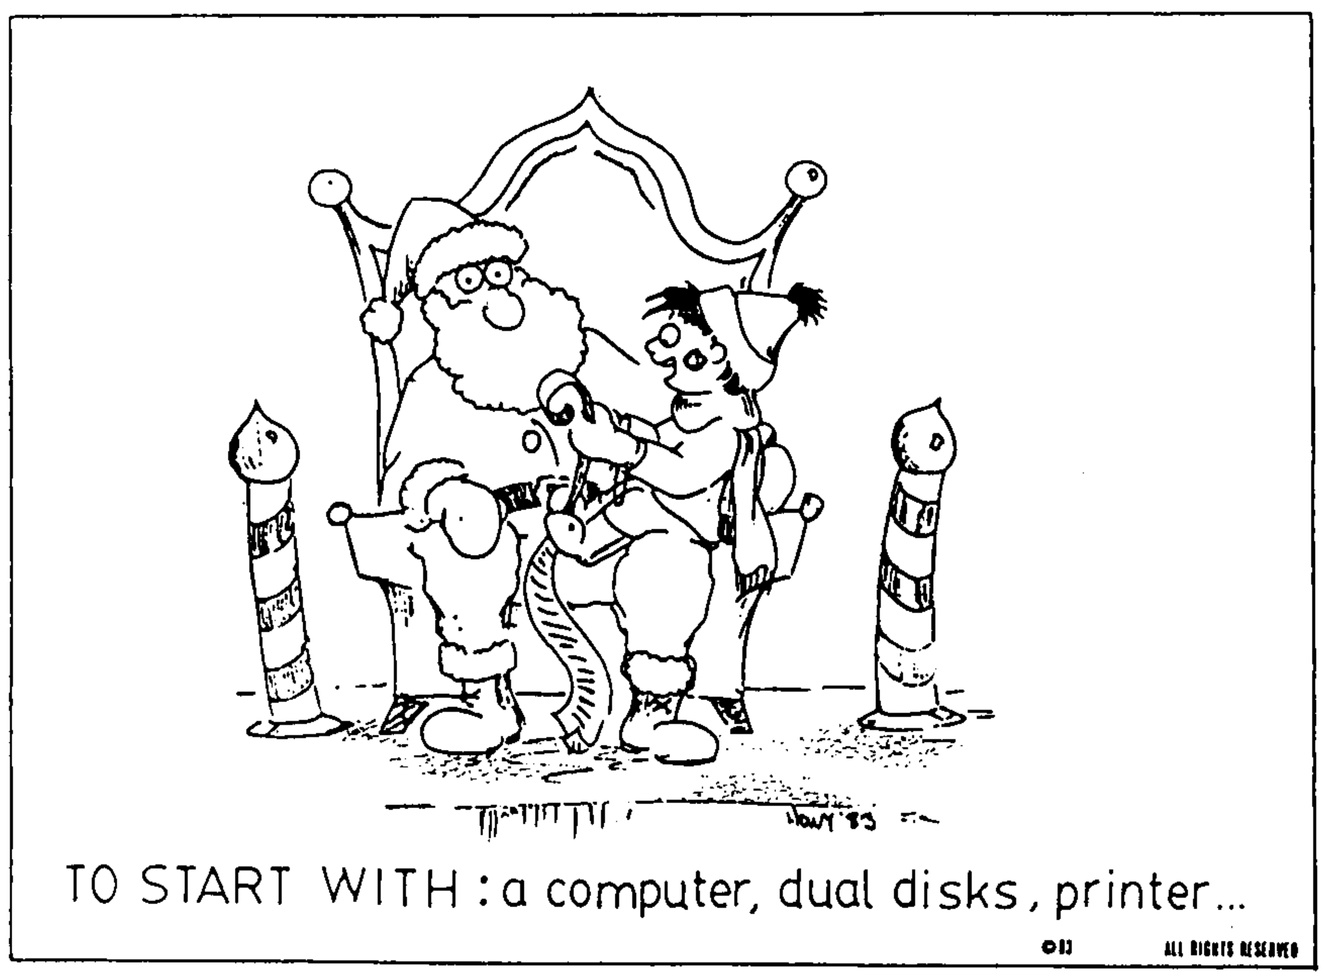
More To Come

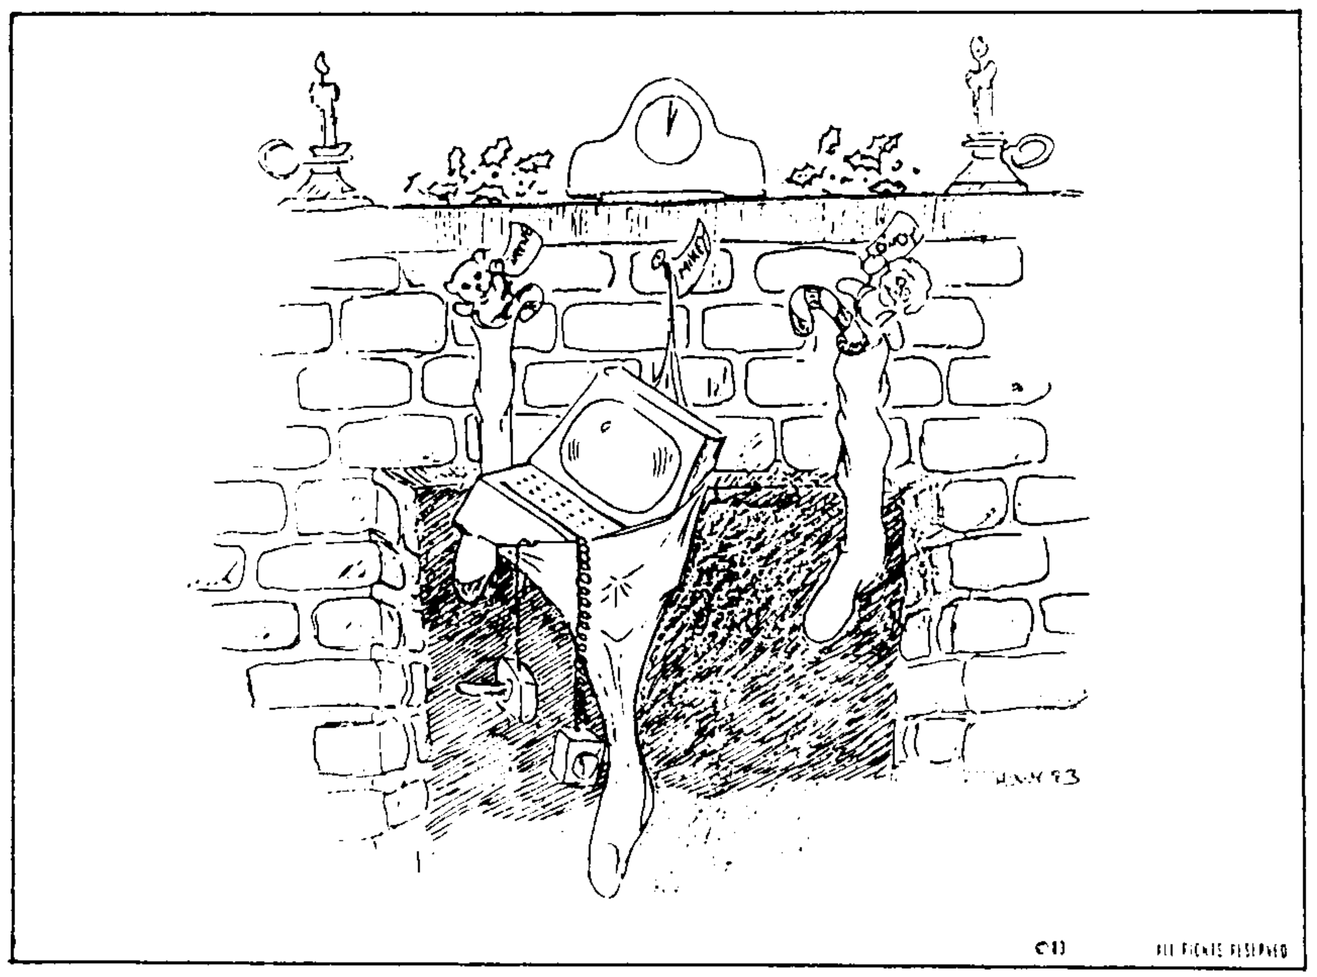
In the next article, we will discuss how to do sorts, index searches and generate many useful lists such as a Christmas card list, a gift list, a party list, and a birthday reminder list.

Merry Christmas

from Mike Panning & Howy Parkins

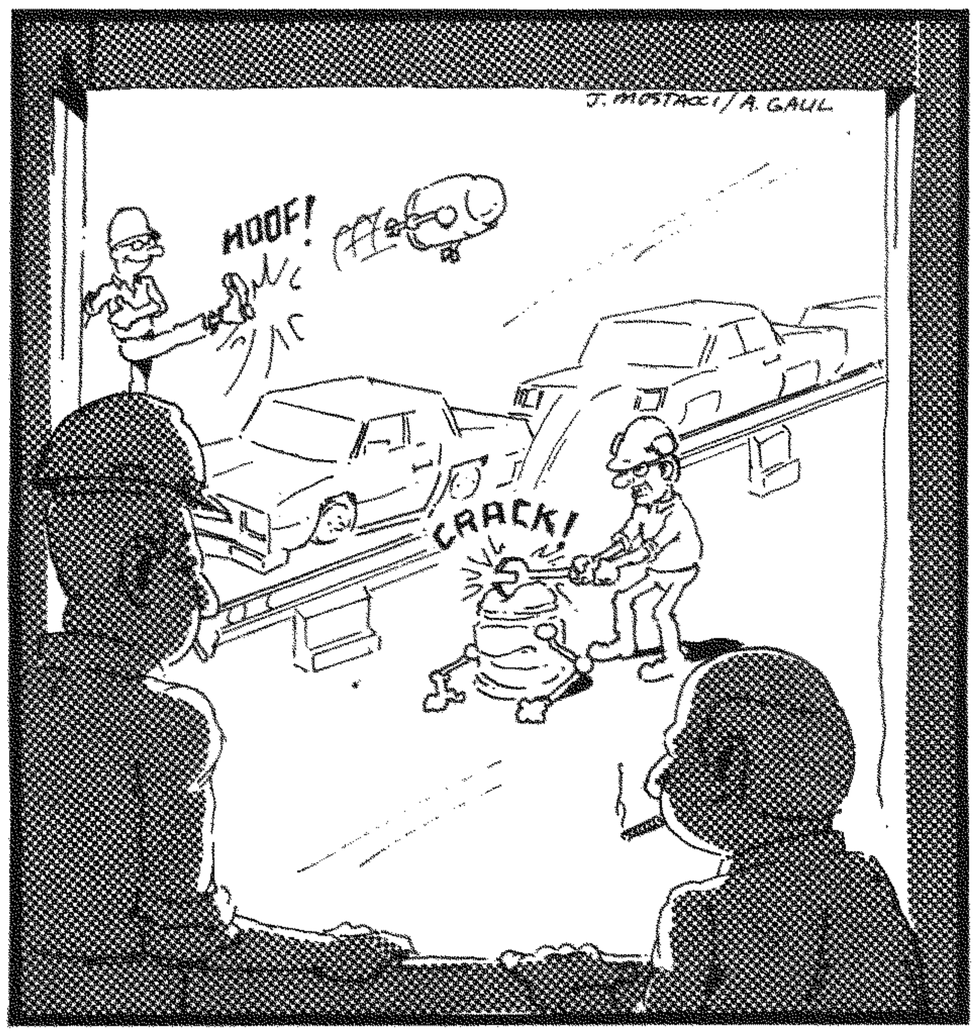




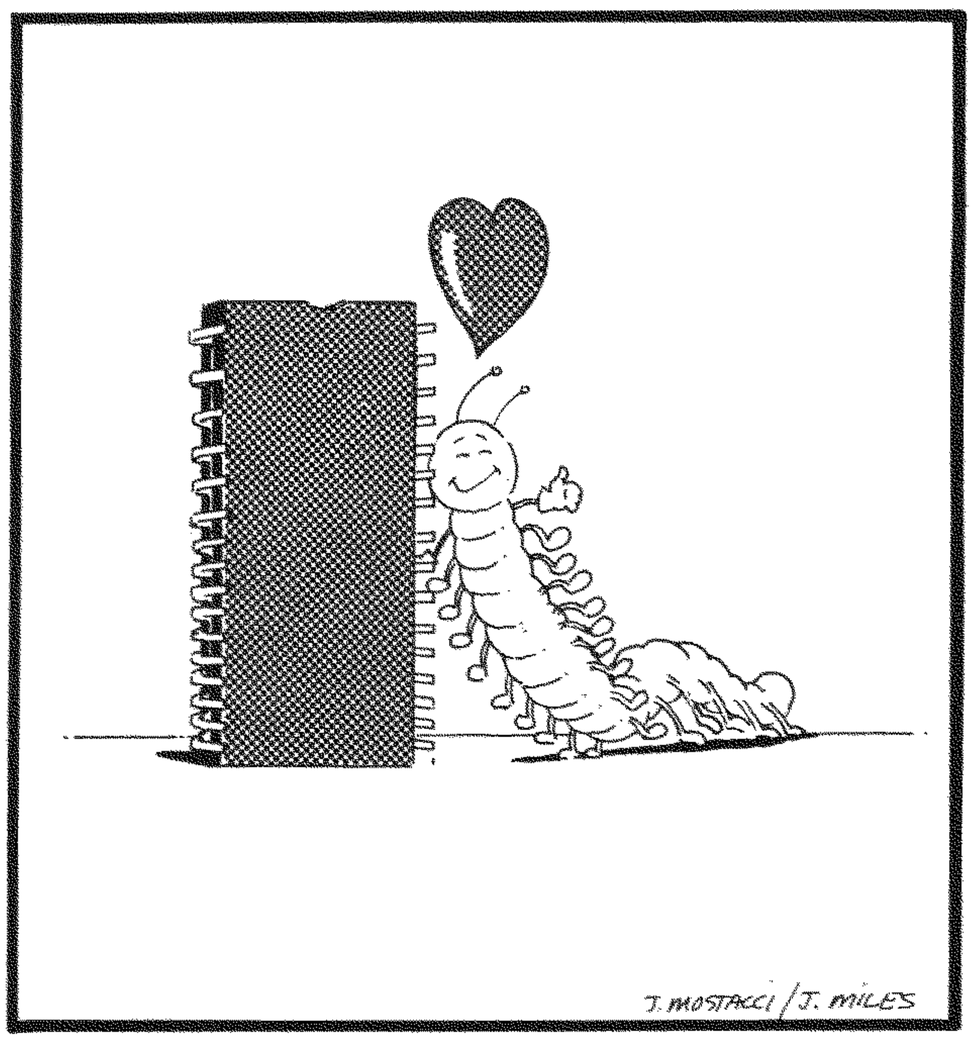


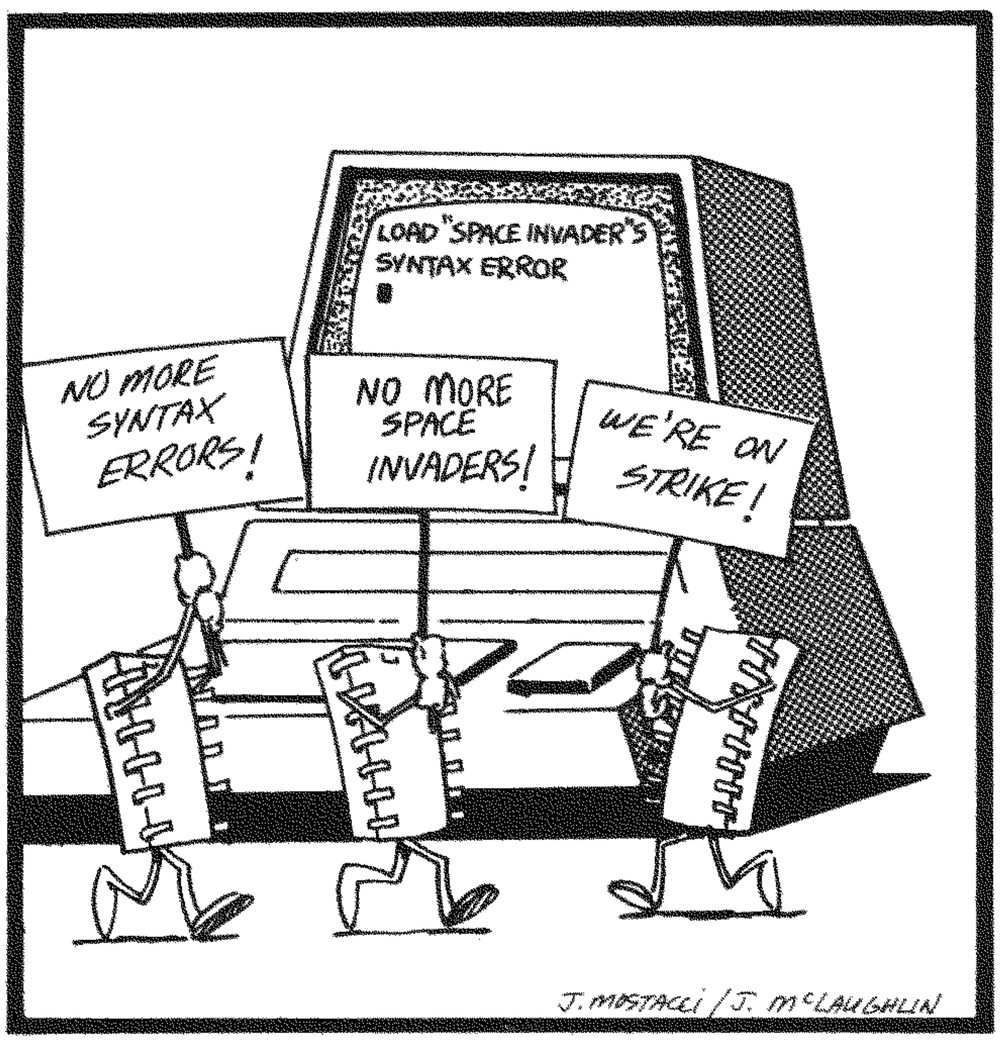
CompuKinks.

Don't worry Mrs. Smith, his facial muscles will eventually relax. But really, he shouldn't be playing video games for such long periods of time.



I see the Union is laying off more robots





BASIC – Beginners All–Purpose Symbolic Instruction Code

Commands, Statements, and Symbols

Command/ Statement	Example	Purpose
CLOSE	10 CLOSE n	Closes logical file 'n'.
CLR	CLR	Sets variables to zero or null.
CMD	CMD D	Keep ieee device 'D' open to monitor bus.
CONT	CONT	Continue program execution after a stop command. No program changes are permitted.
DATA	10 DATA 1,2,3,4 20 DATA TOM, SUE 30 DATA "DOE, TOM"	Specifies data to be read left to right. Alphabetics do not need to be enclosed in quotes. if strings contain spaces, commas, colons, or graphic characters, the string must be enclosed in quotes.
DEF	10 DEF FN R(X)	Defines function 'R'
DIM	10 DIM A(n) 20 DIM A(n,m,o,p) 30 DIM A(n),B(m) 40 DIM A(N) 50 DIM A$(n)	Specifies maximum number of elements in an array or matrix. Specifies maximum number of dimensions in an array. Number of arrays limited by memory. May be dimensioned dynamically. Strings to be dimensioned.
END	999 END	Terminates program execution.
FOR	10 FOR I = 1 TO 10	Begins repetitive loop, specifying loop variable and number of intended iterations (in this example 'I' for 10 iterations).
FRE	PRINT FRE (0)	Returns number of bytes of available memory.
GET	10 GET C 20 GET C$ 30 GET #d, C 40 GET #d, C$	Accepts single character from keyboard. Accepts single string character from keyboard. Accepts single character from specified logical file. Accepts specified single string character from logical file.
GOSUB	10 GOSUB n	Begins execution of a subroutine which begins on line 'n'.
GOTO	GOTO n	Continue program execution at line n after a stop command. Program changes are permitted.
IF...GOTO	10 IF X = 10 GOTO n	Transfers execution to line 'n' if result of condition is true.
IF...THEN	10 IF X = 10 THEN Y = 3	Code following THEN is executed only if result of condition is true. May also be followed by line number to transfer execution.
INPUT	10 INPUT A 20 INPUT A$ 30 INPUT A,A$,B,B$ 40 INPUT #d, A 50 input #d, a$ 60 INPUT #d, A,A$,B,B$	Accepts value of 'A' from keyboard. Accepts value of string variable 'A' from keyboard. The string does not have to be enclosed in quotes. Accepts specified values from keyboard. Accepts value of 'A' from logical file 'd'. accepts specified string from logical file 'd'. Accepts specified values and string from logical file 'd'. Strings do not have to be enclosed in quotes.
LET	LET X = 10	Optional. Assigns variable 'X' the value of 10.
LIST	LIST LIST -n LIST n-m LIST n-	Lists current program. Lists current program through line 'n'. Lists lines 'n' through 'm' of current program. Lists current program from line 'n' to end.
LOAD	10 LOAD 20 LOAD "NAME" 30 LOAD "NAME", d 30 LOAD "NAME", d, c	Loads next encountered program from tape unit into memory. Loads program or file 'NAME' into memory from tape unit. Loads specified file 'NAME' from device 'd'. Loads specified file 'NAME' from device 'd' for command 'c'. (VIC/C64 only – c = 1 for direct memory load)

Command/ Statement	Example	Purpose
NEW	NEW	Deletes current program in memory, sets variables to zero.
NEXT	NEXT	Indicates end of code contained in a FOR/NEXT loop.
ON...GOSUB	10 ON A GOSUB l, m, n	Begins execution of subroutine which begins on specified line (in this example, 'l','m', or 'n') depending on value of index 'A'.
ON...GOTO	10 ON A GOTO l, m, n	Transfers control to specified line 'l','m', or 'n' depending on value of index 'A'.
OPEN	10 OPEN a 20 OPEN a, d 30 OPEN a, d, c 40 OPEN a, d, c, "NAME"	Opens logical file 'a' for read only from tape unit. Opens logical file 'a' for read only from device 'd'. Opens logical file 'a' for command 'c' from device 'd'. Opens logical file 'a' on device 'd'. If device 'd' accepts formatted files, file name is positioned for command.
PEEK	PEEK(a) PEEK(A)	Returns byte value from address 'a'. Address can be dynamic.
POKE	POKE a, b POKE A, B	Puts byte 'b' into address 'a'. Parameters can be dynamic.
POS	10 PRINT POS(0)	Prints next available print position (position of cursor on screen).
PRINT	10 PRINT A 20 PRINT A$ 30 PRINT A, A$ 40 PRINT #d, A 50 PRINT #d, A$	Prints value 'A' on display screen. Prints specified string on screen. Prints specified values or strings on screen, beginning in next available print position (pre-tabbed positions are in columns 10,20,30,40 etc.). Prints value of 'A' on device 'd'. Prints specified string on device 'd'.
READ	10 READ A$, B$	Reads next two data elements into variables A$ and B$.
REM	10 REM comment	Remark indicator. Execution skips entire line.
RESTORE	10 RESTORE	Resets data pointer so that next READ receives first element of first DATA statement.
RETURN	9990 RETURN	Subroutine exit; transfers control to the statement following most recent gosub directing transfer to the subroutine.
RUN	RUN RUN n	Begins execution of program at lowest line number. Begins execution of program a line 'n'.
SAVE	SAVE "NAME" SAVE "NAME", d SAVE "NAME", d, c	Saves current file or program 'NAME' on tape unit. Saves current program or file 'NAME' on device 'd'. Saves file 'NAME' on device 'd'. 'c' specifies eof or eot.
STEP	10 FOR I = 1 TO 10 STEP 2	Alters loop variable increment.
STOP	STOP	Stops program execution.
SYS	SYS (x)	Complete control of pet is transferred to a subsystem at decimal address contained in the argument. Brackets optional.
USR	USR (x)	Transfers program control to a program whose address is at locations 1 and 2 (VIC/C64 - locations 784,785). 'x' is a parameter passed to and from the machine language program.
VERIFY	VERIFY VERIFY "NAME" VERIFY "NAME", d	Verifies current program against next program on tape unit. Verifies current program against program 'NAME' on tape unit. Verifies current program 'NAME' on device 'd'.
WAIT	WAIT a, b, c	Halts execution of Basic until contents of address 'a', and'ed with value 'b' and exclusive or'ed with value 'c', is not equal to zero. 'c' is optional and defaults to zero.

Arithmetic Operators

Symbol	Example	Purpose
=	10 A = B	Assigns a value to a variable.
↑	30 PRINT A↑2	Exponentiation
/	40 C = A/8	Division.
*	50 C = A*8	Multiplication.
+	60 C = A + 8	Addition.
-	70 C = A-8	Subtraction.
=	10 IF A = B THEN PRINT C	'A' Equals 'B'.
<>	10 IF A<>B THEN C = 4	'A' Does not equal 'b'.
<	10 IF A<B THEN C$ = "X"	'A' Is less than 'B'.
>	10 IF A>B THEN C$ = "Y"	'A' Is greater than 'B'.
<=	10 IF A<=B THEN C = 20	'A' Is less than or equal to 'B'.
>=	10 IF A>=B THEN C = D-1	'A' Is greater than or equal to 'B'.
AND	10 IF A AND B THEN C = 9	'A' and 'B' must both be true for statement 10 to be true.
OR	20 IF A OR B THEN C = 9	'A' must be true or 'B' must be true for statement 20 to be true.
NOT	30 IF NOT A THEN PRINT C	Expression is true if 'A' is false.

Note: the numerical values used in the evaluation of logical comparisons are: 'true' is any non-zero number and 'false' is zero.

Special Symbols

Symbols	Example	Purpose
:	10 A = 1:B = 2:C = 3	Allows multiple statements on a line.
;	10 PRINT A;B 20 PRINT A$;B$	Allows same line printing. Elements are separated by 3 spaces. Allows same line printing. String elements are concatenated.
.	X = 10.99	Decimal point
,	10 PRINT A, B LOAD "NAME",d	Allows same line printing. Elements are separated and printed in pre-'tab'ed print positions (columns 10,20,30, etc.). Separates parameters in load, save, open, mid$, on..goto, etc.
?	10 ?A	Abbreviation for 'print'. Stores as one character; lists as word PRINT.
$	10 A$ = "ABCDEFG"	String identifier.
%	10 A% = INT(X)	Integer identifier.
#	10 PRINT#8	Logical file number indicator
"	10 A$ = "ABCDEFG"	String enclosures.
( )	X = (A-2)/(B + 2)	Expression priority evaluation
π	10 C = π*D	Value of Pi 3.1415927.

Reserved Variables

Variable	Purpose
DS	Disk Status number (except 2.0)
DS$	Disk Status string (except 2.0)
EL	Error Line (B Series only)
ER	Error number (B only)
ERR$(	Error String array. See table for messages. (B only)
TI	Time in Jiffies (1/60th's sec.) since power up or TI$ reset (except B Series)
TI$	Time in HHMMSS
ST	The Status variable. See table for functions.

Hierarchy of Operations

Operator	Description
( )	Brackets always dictate priority
↑	Exponentiation
-	Negation (unary minus)
* /	Multiplication & Division
+ -	Addition & Subtraction
< = >	Relational Operations
NOT	Logical NOT (Integer two's complement)
AND	Logical AND
OR	Logical OR

Basic 4.0 Disk Commands

Function	Example	Purpose
APPEND	10 APPEND#d, "NAME"	Open file 'NAME' on device 'd' for appending. New data is added to end of existing data.
BACKUP	BACKUP D0 TO D1	Duplicate disk in drive 0 onto disk in drive 1
CATALOG	CATALOG D0	Displays list of filenames in specified drive.
COLLECT	COLLECT D1	Purges disk in specified drive of any improperly closed files (indicated by * beside file type).
CONCAT	CONCAT "NAME1" TO "NAME2", D1	Concatenates file "NAME1" to file "NAME2". Ie. NAME2 = NAME2 + NAME1
COPY	COPY "NAME",D0 TO "NAME",D1 COPY "NAME",D0 TO "DUP",D0 COPY D0 TO D1	Copies file "NAME" from drive 0 to drive 1 Makes duplicate of file "NAME" Copies entire contents from D0 to D1
DCLOSE	DCLOSE #n	Closes disk logical file 'n'
DIRECTORY	DIRECTORY D0	Exact same as Catalog. Use preference.
DLOAD	DLOAD "NAME",Dd,Uu	Loads program "NAME" from drive 'd' on unit 'u'
DOPEN	DOPEN#n, "NAME",Dd,Uu DOPEN#n, "NAME",Dd,Uu,W	Opens file "NAME" for reading from drive 'd', unit 'u'. Default values: d = 0, u = 8. Data is retrieved through file number 'n'. Opens file "NAME" for writing to drive 'd', unit 'u'. Not necessary for RELative files.
DSAVE	DSAVE "NAME",Dd,Uu	Saves current program to drive 'd' on unit 'u' as file "NAME"
HEADER	HEADER"DISKNAME",Dd,Iid,Uu	Formats disk in drive 'd' unit 'u' assigning it a "DISKNAME" and 'id'.
RECORD	10 RECORD#n, a	Positions relative file open on logical file number 'n' to record number 'a'. 'a' may be dynamic but must be enclosed in brackets.
RENAME	RENAME "NAME" TO "NEWNAME",D0	Changes a file name.
SCRATCH	SCRATCH "NAME",D1	Eliminates file "NAME" from disk.

Additional B Series Commands

Function	Example	Purpose
BANK	BANK b	Sets bank number to 'b'.
BLOAD	BLOAD "NAME",Dd,Uu,ON Bb,Pp	Loads file "NAME" from drive 'd' unit 'u' into bank 'b' at position 'p'
BSAVE	BSAVE "NAME" ON Bb,Pp1 to Pp2	Saves current memory in bank 'b' from address 'p1' to 'p2' as file "NAME" to drive 0 unit 8. Addresses are in decimal.
DCLEAR	DCLEAR D1	Initialize disk in drive 1
DELETE	DELETE 10-30	Deletes lines from current program. Specify line range same as LIST.
DISPOSE	DISPOSE GOSUB	Purges stack of unwanted return addresses (like 'POP')
ELSE	IF ST THEN E = 1 ELSE E = 0	Alternate condition following IF..THEN. May also be used to transfer execution
INSTR	PRINT INSTR (A$, B$)	Returns position of string B$ within A$. Returns 0 if not found.
KEY	KEY KEYn, "CATALOG D0" + CHR$(13)	Displays list of function key definitions Defines function key 'n'.
PUDEF	PUDEF" -.,£"	Re-defines Print Using format characters. Default is " ,.$". In this example, space is changed to '-', comma to period, period to comma, and dollars to pounds.
RESUME	RESUME RESUME n RESUME NEXT	Continues execution after program error or editing Resumes execution at line 'n' Resumes execution at start of current active FOR/NEXT
TRAP	TRAP 50000	Specifies routine at line 50000 as an ON ERROR routine.
USING	PRINT USING "-$##,###";X	Specifies format to be used for numerical output.

String Functions

Function	Example	Purpose
ASC	10 A = ASC(" XYZ ")	Returns the integer value corresponding to ASCII code of the first character in string.
CHR$	10 A$ = CHR$(n)	Returns character corresponding to ASCII code number.
LEFT$	10 PRINT LEFT$(X$, a)	Returns leftmost 'a' characters from string.
LEN	10 PRINT LEN(X$)	Returns length of string.
MID$	10 PRINT MID$(X$, a, b)	Returns 'b' characters from string, starting with the 'a'th character.
RIGHT$	10 PRINT RIGHT$(X$, a)	Returns rightmost 'a' characters from string.
STR$	10 A$ = STR$(A)	Returns string representation of variable 'A'
VAL	10 A = VAL(A$) 20 A = VAL(" A ")	Returns numeric representation of string. If string not numeric, returns " 0 " .

ASC, LEN and VAL functions return numeric results. They must be used as part of any expression. Assignement statements are used here for examples only; other statement types may be used.

Arithmetic Functions

Function	Example	Purpose
ABS	10 C = ABS(A)	Returns magnitude of argument without regard to sign.
ATN	10 C = ATN(A)	Returns arctangent of argument. 'c' will be expressed in radians.
COS	10 C = COS(A)	Returns cosine of argument. 'A' must be expressed in radians.
DEF FN	10 DEF FNA(B) = C * D	Allows user to define a function. Function label 'a' must be a single letter; argument 'b' is a dummy.
EXP	10 C = EXP(A)	Returns constant 'e' raised to the power of the argument.
INT	10 C = INT(A)	Returns largest integer less than or equal to argument.
LOG	10 C = LOG(A)	Returns natural logarithm of argument. Argument must be greater than or equal to zero.
RND	10 C = RND(A)	Generates a random number between zero and one. If 'a' is less then 0, the same random number is produced in each call to rnd. If 'a' = 0, the same sequence of random number is generated each time rnd is called. If 'a' is greater than 0, a new sequence is produced for each call to rnd.
SGN	10 C = SGN(A)	Returns -1 if argument is negative, returns 0 if argument is zero, and returns + 1 if argument is positive.
SIN	10 C = SIN(A)	Returns sin of argument. 'A' must be expressed in radians.
SQR	10 C = SQR(A)	Returns the square root of argument.
TAN	10 C = TAN(A)	Returns tangent of argument. 'A' must be expressed in radians.

Mathematical Functions

Function	**Basic Equivalent**
Secant Cosecant Cotangent	SEC(X) = 1 / COS(X) CSC(X) = 1 / SIN(X) COT(X) = 1 / TAN(X)
Inverse Sine Inverse Cosine Inverse Secant Inverse Cosecant Inverse Cotangent	ARCSIN(X) = ATN(X / SQR(–X∗X + 1)) ARCCOS(X) = ATN(X / SQR(–X∗X + 1)) + π/2 ARCSEC(X) = ATN(X / SQR(X∗X–1)) ARCCSC(X) = ATN(X / SQR(X∗X–1) + (SGN(X) – 1∗π/2) ARCCOT(X) = ATN(X) + π/2
Hyperbolic Sine Hyperbolic Cosine Hyperbolic Tangent Hyperbolic Secant Hyperbolic Cosecant Hyperbolic Cotangent	SINH(X) = (EXP(X) – EXP(–X)) / 2 COSH(X) = (EXP(X) + EXP(–X)) / 2 TANH(X) = EXP(–X) / (EXP(X) + EXP(–X)) ∗ 2 + 1 SECH(X) = 2 / (EXP(X) + EXP(–X) CSCH(X) = 2 / (EXP(X) – EXP(–X) COTH(X) = EXP(–X) / (EXP(X) – EXP(–X)) ∗ 2 + 1
Inverse Hyperbolic Sine Inverse Hyperbolic Cosine Inverse Hyperbolic Tangent Inverse Hyperbolic Secant Inverse Hyperbolic Cosecant Inverse Hyperbolic Cotangent	ARCSINH(X) = LOG(X + SQR(X∗X + 1)) ARCCOSH(X) = LOG(X / SQR(X∗X–1)) ARCTANH(X) = LOG((1 + X) / (1–X)) / 2 ARCSECH(X) = LOG(SQR(–X∗X + 1) + 1/X) ARCCSCH(X) = LOG(X / SQR(X∗X–1) + (SGN(X) – 1∗π/2) ARCCOTH(X) = LOG(X) + π/2

ST - The Status Variable

Bit	Val	Cassette Read	IEEE	Tape Load/Ver.	Vic/64 RS-232
0-7	0	OK	OK	OK	OK
0	1		time out on write		parity error
1	2		time out on read		framing error
2	4	short block		short block	rec. buffer overrun
3	8	long block		long block	unused
4	16	unrecoverable read error		any mismatch	CTS signal missing
5	32	checksum error		checksum error	unused
6	64	end of file	EOI		DSR signal missing
7	-128	end of tape	device not present	end of tape	break detected

Printer Control Characters

CHR$ values are sent to print file with Secondary Addr 0 or 1

CHR$	Operation
10	Line Feed
13	'Carriage Return' (automatic Line Feed on CBM printers)
14	Begin double-width character mode
15	End double-width character mode
18	Begin reverse character mode
146	End reverse character mode
19	Set top of page
147	Feed to top of next page
17	Switch to upper/lower case character set
145	Switch to upper case/graphics character set
16	Tab to position in next 2 characters
27	Move to specified dot position
8	Begin dot-programmable graphic mode
26	Repeat graphics data

Table Of Secondary Addresses

Eg. OPEN 4, 4, 7 ; 7 is the Secondary Address on CBM printers that alters line spacing. Once open the new value can be sent. Secondary addresses are not applicable to the VIC 20/Commodore 64 RS-232 routines ('device' 2), keyboard (device 0), screen (device 3), or the CBM 8010 Modem (device 5).

Sec. Addr.	I/O Device & Device Number (DV#) Printer 4	Cassette 1 or 2	Vic/64 Cassette 1	Disk 8
0	Print data exactly as received	seq. read	Load & relocate (dflt)	Load, and Dir read
1	Print data according to previously defined format	Write file + end-of-file marker on Close	Load without relocating	Program Save
2	Format Set-up	Write file + eof + end of tape marker on Close	Write file + eof + end of tape marker on Close	R/W channels are 2–14
3	Set number of lines per page for paging			
4	Enable printer format diagnostics			
5	Define a programmable character			
6	Set spacing between lines			
7	Upper/Lower case			
8	ASCII/Graphics			
9	Suppress Diagnostic Message Printing			
10	Reset Printer			
11	Set Uni-Direction			
12	Reset Uni-Direction			
13	Set Condense mode			
14	Reset Condense mode			
15	Set pseudo letter quality			Command Ch.
21	Reset pseudo letter quality			
17	Storing bit image data			
18	Printing bit data previously written			

DS & DS$ - Disk Status Variables

DS	Error Description
0	OK, no error exists
1	files scratched response (not an error)
2-19	Unused: can occur, should be ignored
20	read error; block header not found
21	read error; sync character not found
22	read error; data block not present
23	read error; checksum error in data
24	read error; byte decoding error
25	write error; write verify error
26	write protect on
27	read error; checksum error in header
28	write error; data extends into next block
29	disk id mismatch
30	syntax error; general syntax
31	syntax error; invalid command
32	syntax error; command line > 58 chars
33	syntax error; invalid filename
34	syntax error; no filename given
39	syntax error; command file not given
50	record not present
51	overflow in record
52	file too large
60	file open for write
61	file not open
62	file not found
63	file exists
64	file type mismatch
65	no block; t,s is next available block
66	illegal track or sector
67	illegal system track or sector
70	no channels (available)
71	dir error (directory error)
72	disk full or directory full
73	cbm dos v2 (or v2.x for later dos's); power up message, also indicates write attempt with dos mismatch
74	drive not ready
75	format speed error
76	controller error

8032 Control Characters

Most functions can be activated by combinations of simultaneous key depressions, a phenomena of the keyboard hardware. Notice that the CHR$ values of complimentary functions differ by 128.

Function	CHR$	ESC/RVS	Keyboard Combination
BELL	7	G	
GRAPHICS TEXT	142 14	Shift N N	Both Shifts + "

Error Messages

Message	Description
BAD DATA	String data was received from an open file, but the program was expecting numeric data.
BAD SUBSCRIPT	The program was trying to reference an element of an array whose number is outside of the range specified in the DIM statement.
CAN'T CONTINUE	The CONT command will not work, either because the program was never 'RUN', there has been an error, or a line has been edited.
DEVICE NOT PRESENT	The required I/O device was not available for an 'OPEN', 'CLOSE', 'CMD', 'PRINT#', 'INPUT#', or 'GET#'.
DIVISION BY ZERO	Division by zero is a mathematical oddity and not allowed.
EXTRA IGNORED	Too many items of data were typed in response to an input statement. Only the first few items were accepted.
FILE NOT FOUND	If you were looking for a file on tape, an 'end-of-tape' marker was found. If you were looking on a disk, no file with that name exists.
FILE NOT OPEN	The file specified in a 'CLOSE', 'CMD', 'PRINT#', 'INPUT#', or 'GET#', must first be 'OPEN'ed.
FILE OPEN	An attempt was made to OPEN a file using the number of an already open file.
FORMULA TOO COMPLEX	The string expression being evaluated should be split into at least two parts for the system to work with, or a formula has too many parentheses.
ILLEGAL DIRECT	The 'INPUT' statement can only be used within a program, and not in direct mode.
ILLEGAL QUANTITY	A number used as the argument of a function or statement is out of the allowable range.
LOAD	A problem has occured during program LOAD, disk or tape
NEXT WITHOUT FOR	This is caused by either incorrectly nesting loops or having a variable name in a 'NEXT' statement that doesn't correspond with one in a 'FOR' statement.
NOT INPUT FILE	An attempt was made to 'INPUT' or 'GET' data from a file which was specified to be for output only.
NOT OUTPUT FILE	An attempt was made to 'PRINT' data to a file which was specified as input only.
OUT OF DATA	A 'READ' statement was executed but there is no data left unread in a 'DATA' statement.
OUT OF MEMORY	There is no more 'ram' available for program or variables. This may also occur when too many 'FOR' loops have been nested, or when there are too many 'GOSUB's in effect.
OVERFLOW	The result of a computation is larger than the largest number allowed, which is 1.70141884e+38.
REDIM'D ARRAY	An array may only be 'DIM'ensioned once. If an array variable is used before that array is 'DIM'd, an automatic 'DIM' operation is performed on that array setting the number of elements to ten, and any subsequent 'DIM's will cause this error.
REDO FROM START	Character data was typed in during an 'INPUT' statement when numeric data was expected. Just re-type the entry so that it is correct, and the program will continue by itself.
RETURN WITHOUT GOSUB	A 'RETURN' statement was encountered, and no 'GOSUB' command has been issued.
STRING TOO LONG	(except 2.0) A string can contain up to 255 characters.
SYNTAX	A statement or command is unrecognizable. A missing or extra parenthesis, misspelled keywords, etc.
TYPE MISMATCH	This error occurs when a number is used in place of a string, or vice-versa.
UNDEF'D FUNCTION	A user defined function was referenced, but it has never been defined using the 'DEF FN' statement.
UNDEF'D STATEMENT	An attempt was made to 'GOTO' or 'GOSUB' or 'RUN' a line number that doesn't exist.
VERIFY	The program on tape or disk does not match the program currently in memory.

B-Series Error Messages

This list is a summary of B-Series error messages that are displayed by PRINTing ERR$(X) where X equals the value down the left column.

X	Message	Explanation
0	?STOP KEY DETECTED	Occurs when doing a KERNAL I/O function and the STOP key is pressed. May occur during LOAD or SAVE (or OPEN, CLOSE, GET#, INPUT#, PRINT# when the cassette tape is moving). CLOSE any open write files to save data.
1	?TOO MANY FILES	Maximum OPEN files is ten.
2	?FILE OPEN	An attempt was made to OPEN or DOPEN a file with a file number already in use.
3	?FILE NOT OPEN	An attempt was made to access a file not previously OPEN or DOPENed
4	?FILE NOT FOUND	The file specified in OPEN or LOAD was not found on the device specified. In the case of tape I/O, and end of tape marker was encountered.
5	?DEVICE NOT PRESENT	An attempt was made to access a device not currently connected or powered-up on the IEEE-488 bus. May happen on OPEN, CLOSE, CMD, INPUT#, GET#, PRINT#. If filename is not specified with OPEN, this error will occur.
6	?NOT INPUT FILE	An attempts was made to read a file originally OPENed for writing.
7	?NOT OUTPUT FILE	An attempts was made to write data to a file originally OPENed for reading. The keyboard cannot be written to.
8	?MISSING FILENAME	All LOADs and SAVEs from the IEEE port (eg. disk) require a filename.

X	Message	Explanation
9	?ILLEGAL DEVICE NUMBER	Occurs if you try to access a device in an illegal manner. For example, LOADing or SAVEing from/to the keyboard, screen, or RS-232.
10	?ARE YOU SURE	Confirmation prompt for BACKUP, SCRATCH, and HEADER. It is not an error message and occurs only in direct mode, not during BASIC program execution.
11	?BAD DISK	Media failure on HEADER command.
12	<return> READY. <return>	This Is Not An Error Message. This message lets you know that your system is ready to use.
13	<space> IN <space>	Not An Error Message. Used to indicate which line an error has occurred "in".
14	?BREAK	This occurs when the STOP key is pressed during BASIC execution. CONT can be used to restart the program.
15	?EXTRA IGNORED	Too many items of data or separators were entered in response to an INPUT statement.
16	?REDO FROM START	This diagnostic message occurs when a numeric variable is used with INPUT and non-numeric data is received. INPUT continues to function until acceptable data has been received.
17	Last Evaluated Number	This Is Not An Error Message. This is the last value that has been processed through the numerical output buffer. (eg. print 100/10 : print ERR$(17) ...will print 10 both times.
18	"MORE" <return>	This Is Not An Error Message. Prints "MORE" and carriage return.
19	Power On Message	This Is Not An Error Message. Prints: *** COMMODORE BASIC 128, B4.0*** *** COMMODORE BASIC 256, B4.0***
20	?NEXT WITHOUT FOR	Either a NEXT is improperly nested or the variable in a NEXT statement corresponds to no previously executed FOR statement.
21	?SYNTAX	BASIC cannot recognize the statement you have typed. Caused by such things as missing parenthesis, illegal characters, incorrect punctuation, misspelled keyword.
22	?RETURN WITHOUT GOSUB	A RETURN statement was encountered with noprevious GOSUB.
23	?OUT OF DATA	An attempt was made to READ data from a DATA statement but no data exists or the program has already read them all.
24	?ILLEGAL QUANTITY	Occurs when a function is accessed with a parameter out of range caused by: 1. A matrix subscript out of range (0 < X < 32767) 2. LOG (negative or zero argument) 3. SQR (negative argument) 4. A↑B where A<0 and B not integer. 5. Call of USR before a machine language subroutine has been patched in. 6. Use of string functions MID$, LEFT$, RIGHT$, with length parameters out of range. 7. Index on...GOTO out of range. 8. Addressof PEEK, POKE, WAIT or SYS out of range. 9. Byte parameters of WAIT, POKE, TAB and SPC out of range.
25	?OVERFLOW	Numbers resulting from computations or input that are greater than 1.70141184E + 38 or less than 2.93873587E-39.
26	?OUT OF MEMORY	BASIC text space, or Variables space, or Arrays memory space has been completely filled
27	?UNDEFINED STATEMENT	A GOTO, GOSUB, or THEN has been executed with a line number that does not exist.
28	?BAD SUBSCRIPT	An attempt was made to reference an array element which is outside the dimensions specified in the DIM statement.
29	?REDIM'D ARRAY	An attempt was made to define an array using a variable already used in an array.
30	?DIVISION BY ZERO	Illegal divide. Message is followed by the line number – list and check variables.
31	?ILLEGAL DIRECT	INPUT, INPUT#, GET, GET#, and DEF cannot be used in direct mode.
32	?TYPE MISMATCH	An arithmetic operation has been given non-numeric data, or a string operation has been numeric data.
33	?STRING TOO LONG	Maximum string length is 255 characters. This error will also occur if INPUT# receives more than 80 characters without a carriage return (ie. BASIC input buffer is 80 bytes long).
34	?FILE DATA	Occurs when a numeric variable is used with INPUT# and non-numeric data is received.
35	?FORMULA TOO COMPLEX	BASIC has run out of temporary pointers to keep track of substrings in evaluating a string expression. Break the expression into two smaller parts to cure the problem.
37	?UNDEFINED FUNCTION	Reference was made to a user defined function which had never been defined with DEF.
38	?LOAD ERROR	Cassette tape only. To improve tape reliability, programs are recorded twice with SAVE. This error will occur if LOAD finds recording errors in corresponding positions of both recordings. If more than 31 errors are detected in the first pass, LOAD will not attempt to read the second.
39	?VERIFY ERROR	A VERIFY operation did not match the contents of file with the contents of memory. Re-SAVE your program on another disk or tape.
40	?OUT OF STACK	Too many open FOR...NEXT loops or too many GOSUB calls.
41	?UNABLE TO RESUME	Resume will not operate after a fatal error.
42	?UNABLE TO DISPOSE	All of the DISPOSE type items have been disposed of or none exist.
43	?OUT OF TEXT	A LOAD or DLOAD has attempted to bring in a file larger than 64K. This error will not occur when using the BLOAD command.

Commodore 6845 Video Chip

POKE 59520, R#	POKE 59521, Value
R0	Horizontal total number of characters on line (Nht) including horizontal retrace. (true value = number + 1)
R1	Horizontal number of characters displayed (Nhd)
R2	Distance (in characters) from left to right margin of screen + 1
R3	Sync width. Lo nybble is vertical sync width (in lines) Hi nybble is horizontal sync (in characters).
R4	Number of display lines including retrace (Nvt).
R5	Vertical position of the edge of the screen.
R6	Number of display lines on screen (Nvd)
R7	Height of upper edge from bottom of screen (in lines displayed)
R8	Interlace and Skew:- Bit 0 1 = interlaced mode 0 = non interlaced mode Bit 1 if Bit 0 = 1 then interlace and video mode Bit 2 not used Bit 3 not used Bit 4 1 = scan from 32770 in memory Bit 5 1 = scan from 32772 in memory Bit 6 cursor (not implemented on the PET) Bit 7 cursor (not implemented on the PET)
R9	Number of lines between top of one display line and top of the next
R10	Cursor (not implemented on the PET)
R11	Cursor (not implemented on the PET)
R12	Control Register: Bit 0 add 256 to start address (512 for 8032) Bit 1 add 512 to start address (1024 for 8032) Bit 2 invert flyback Bit 3 invert video signal Bit 4 use top half of 4K character generator Bit 5 (not implemented on the PET) Bit 6 (not implemented on the PET) Bit 7 not used
R13	Value + 32768 is address of first character (multiply by 2 for 8032)
R14	Cursor location HI (not implemented on the PET)
R15	Cursor location LO (not implemented on the PET)
R16	Light pen position HI (read only)
R17	Light pen position LO (read only)

VIC 20 Note Values

Where two values are shown, it is necessary to alternate between them to get the true note.
Voice frequency registers are 36874/5/6. Noise reg is 36877. Volume is Lo nybble of 36878. See Memory Map

Reverse of ASCII

BASIC 2.0 / BASIC 4.0 Memory Map

Jim Butterfield, Toronto Ont.

Reference to DOS, MLM, 80-Column, or those marked with an * are for BASIC 4.0 only. There are some differences between usage for the 40- and 80-column machines. 32K BASIC 4.0 Zero Page contents for 4000 and 8000 series machines after power up by Richard Evers. BASIC 2.0 Zero Page contents are mostly identical except for vectors.

BASIC 2.0 / BASIC 4.0 Memory Map

Jim Butterfield, Toronto, Ont.

Reference to DOS, MLM, 80–Column, or those marked with an * are for BASIC 4.0 only. There are some differences between usage for the 40– and 80–column machines.

Hex	Dec	Description
0000 - 0002	0–2	USR jump
0003	3	Search character
0004	4	Scan–between–quotes flag
0005	5	Input buffer pointer; # of subscripts
0006	6	Default DIM flag
0007	7	Type: FF = string, 00 = numeric
0008	8	Type: 80 = integer, 00 = floating point
0009	9	Flag: DATA scan; LIST quote; memory
000A	10	Subscript flag; FNX flag
000B	11	0 = INPUT; $40 = GET; $98 = READ
000C	12	ATN sign/Comparison Evaluation flag
000D - 000F	13–15	Disk status DS$ descriptor
0010	16	Current I/O device for prompt–suppress
0011 - 0012	17–18	Integer value (for SYS, GOTO etc)
0013 - 0015	19–21	Pointers for descriptor stack
0016 - 001E	22–30	Descriptor stack(temp strings)
001F - 0022	31–34	Utility pointer area
0023 - 0027	35–39	Product area for multiplication
0028 - 0029	40–41	**Pointer:** Start of BASIC
002A - 002B	42–43	**Pointer:** Start of Variables
002C - 002D	44–45	**Pointer:** Start of Arrays
002E - 002F	46–47	**Pointer:** End of Arrays
0030 - 0031	48–49	**Pointer:** String Storage (moving down)
0032 - 0033	50–51	**Pointer:** Utility String
0034 - 0035	52–53	**Pointer:** Limit of Memory
0036 - 0037	54–55	Current BASIC line number
0038 - 0039	56–57	Previous BASIC line number
003A - 003B	58–59	**Pointer:** BASIC statement for CONT
003C - 003D	60–61	Current DATA line number
003E - 003F	62–63	Current DATA address
0040 - 0041	64–65	Input vector
0042 - 0043	66–67	Current variable name
0044 - 0045	68–69	Current variable address
0046 - 0047	70–71	Variable pointer for FOR/NEXT
0048 - 0049	72–73	Y–save; op–save; BASIC pointer save
004A	74	Comparison symbol accumulator
004B - 0050	75–80	Misc work area, pointers, etc
0051 - 0053	81–83	Jump vector for functions
0054 - 005D	84–93	Misc numeric work area
005E	94	Accum#1: Exponent
005F - 0062	95–98	Accum#1: Mantissa
0063	99	Accum#1: Sign
0064	100	Series evaluation constant pointer
0065	101	Accum#1 hi–order (overflow)
0066 - 006B	102–107	Accum#2: Exponent, etc.
006C	108	Sign comparison, Acc#1 vs #2
006D	106	Accum#1 lo–order (rounding)
006E - 006F	110–111	Cassette buff len/Series pointer
0070 - 0087	112–135	CHRGET subroutine; get BASIC char
0077 - 0078	119–120	BASIC pointer (within subrtn)
0088 - 008C	136–140	Random number seed.
008D - 008F	141–143	Jiffy clock for TI and TI$
0090 - 0091	144–145	Hardware interrupt vector
0092 - 0093	146–147	BRK interrupt vector
0094 - 0095	148–149	NMI interrupt vector
0096	150	Status word ST
0097	151	Which key down; 255 = no key
0098	152	Shift key: 1 if depressed
0099 - 009A	153–154	Correction clock
009B	155	Keyswitch PIA: STOP and RVS flags
009C	156	Timing constant for tape
009D	157	Load = 0, Verify = 1
009E	158	Number of characters in keybd buffer
009F	159	Screen reverse flag
00A0	160	IEEE output; 255 = character pending
00A1	161	End–of–line–for–input pointer
00A3 - 00A4	163–164	Cursor log (row, column)
00A5	165	IEEE output buffer
00A6	166	Key image
00A7	167	0 = flash cursor
00A8	168	Cursor timing countdown
00A9	169	Character under cursor
00AA	170	Cursor in blink phase
00AB	171	EOT received from tape
00AC	172	Input from screen/from keyboard
00AD	173	X save
00AE	174	How many open files
00AF	175	Input device, normally 0
00B0	176	Output CMD device, normally 3
00B1	177	Tape character parity
00B2	178	Byte received flag
00B3	179	Logical Address temporary save
00B4	180	Tape buffer character/MLM command
00B5	181	File name pointer/MLM flag, counter
00B7	183	Serial bit count
00B9	185	Cycle counter
00BA	186	Tape writer countdown
00BB - 00BC	187–188	Tape buffer pointers, #1 and #2
00BD	189	Write leader count; read pass1/2
00BE	190	Write new byte; read error flag
00BF	191	Write start bit; read bit seq error
00C0 - 00C1	192–193	Error log pointers, pass1/2
00C2	194	0 = Scan/1–15 = Count/$40 = Load/$80 = End
00C3	195	Write leader length; read checksum
00C4 - 00C5	196–197	Pointer to screen line
00C6	198	Position of cursor on above line
00C7 - 00C8	199–200	Utility pointer: tape, scroll
00C9 - 00CA	201–202	Tape end addrs/End of current program
00CB - 00CC	203–204	Tape timing constants
00CD	205	0 = direct cursor, else programmed
00CE	206	Tape read timer 1 enabled
00CF	207	EOT received from tape
00D0	208	Read character error
00D1	209	# characters in file name
00D2	210	Current file logical address
00D3	211	Current file secondary addrs
00D4	212	Current file device number
00D5	213	Right–hand window or line margin
00D6 - 00D7	214–215	**Pointer:** Start of Tape Buffer
00D8	216	Line where cursor lives
00D9	217	Last key/checksum/misc.
00DA - 00DB	218–219	File name pointer
00DC	220	Number of INSERTs outstanding
00DD	221	Write shift word/read character in
00DE	222	Tape blocks remaining to write/read
00DF	223	Serial word buffer
00E0 - 00F8	224–248	(40–column) Screen line wrap table
00E0 - 00E1	224–225	(80–column) Top, bottom of window
00E2	226	(80–column) Left window margin
00E3	227	(80–column) Limit of keybd buffer
00E4	228	(80–column) Key repeat flag
00E5	229	(80–column) Repeat countdown
00E6	230	(80–column) New key marker
00E7	231	(80–column) Chime time
00E8	232	(80–column) HOME count
00E9 - 00EA	233–234	(80–column) Input vector
00EB - 00EC	235–236	(80–column) Output vector
00F9 - 00FA	249–250	Cassette status, #1 and #2
00FB - 00FC	251–252	Tape start address/MLM Pointer
00FD - 00FE	253–254	MLM/DOS pointer/misc.
0100 - 010A	256–266	STR$ work area/MLM work
0100 - 013E	256–318	Tape read error log
0100 - 01FF	256–511	Processor stack
0200 - 0250	512–592	MLM work area; Input buffer
0251 - 025A	593–602	File logical address table
025B - 0264	603–612	File device number table
0265 - 026E	613–622	File secondary addr table
026F - 0278	623–632	Keyboard input buffer
027A - 0339	634–825	Tape#1 input buffer
033A - 03F9	826–1017	Tape#2 input buffer
033A	826	DOS character pointer
033B	827	DOS drive 1 flag
033C	828	DOS drive 2 flag
033D	829	DOS length/write flag
033E	830	DOS syntax flags
033F - 0340	831–832	DOS disk ID
0341	833	DOS command string count
0342 - 0352	834–850	DOS file name buffer
0353 - 0380	851–896	DOS command string buffer
03EE - 03F7	1006–1015	(80–column) Tab stop table
03FA - 03FB	1018–1019	Monitor extension vector
03FC	1020	IEEE timeout defeat* $FF–disable
0400 - 7FFF	1024–32767	Available RAM including expansion
8000 - 83FF	32768–33791	(40–column) Video RAM
8000 - 87FF	32768–34815	(80–column) Video RAM
9000 - AFFF	36864–45055	Available ROM expansion area* (2.0: –BFFF, –49151)
B000 - DFFF	45056–57343	BASIC, DOS, Machine Lang Monitor (2.0 BASIC: COOO–E0F8, 49152–57592)
E000 - E7FF	57344–59391	Screen, Keyboard, Interrupt programs (2.0: EOF9–)
E810 - E813	59408–59411	PIA 1 – Keyboard I/O
E820 - E823	59424–59427	PIA 2 – IEEE–488 I/0
E840 - E84F	59456–59471	VIA – I/O and timers
E880 - E881	59520–59521	(80–column) CRT Controller
F000 - FFFF	61440–65535	Reset, I/O handlers, Tape routines

E810	Diagnostic Sense	IEEE EOI In	Cassette Sense #2	Cassette Sense #1	Keyboard Row Select PA				59408

BASIC 2.0 / BASIC 4.0 ROM Routines

Jim Butterfield, Toronto Ont.

The BASIC 4.0 40–character and 80–character machines are the same except for addresses $E000–$E7FF. This map shows where various routines lie. The first address is not necessarily the proper entry point for the routine. Similarly, many routines require register setup or data preparation before calling.

BASIC 2.0 ROM Routines

Address	Description
C000 – C045	Action addresses for primary keywords
C046 – C073	Action addresses for functions
C074 – C091	Hierarchy & action addrs for operators
C092 – C192	Table of BASIC keywords
C193 – C2A9	BASIC messages, mostly error msgs
C2AA – C2D7	Search stack FOR/GOSUB
C2D8 – C31A	Open up space in memory
C31B – C327	Test: stack too deep?
C328 – C354	Check available memory
C355	Send canned error message, then:
C389 – C3AA	Warm start (ready.)
C3AB – C441	Handle new BASIC line input
C442 – C46E	Rebuild chaining of BASIC lines
C46F – C494	Receive line from keyboard
C495 – C52B	Crunch keywords into BASIC tokens
C52C – C55A	Search BASIC for given line number
C55B	Perform [NEW], and;
C577 – C5A6	Perform [CLR]
C5A7 – C5B4	Reset BASIC execution to start
C5B5 – C657	Perform [LIST]
C658 – C6FF	Perform [FOR]
C700 – C72F	Execute BASIC statement
C730 – C73E	Perform [RESTORE]
C73F – C76A	Perform [STOP] or [END]
C76B – C784	Perform [CONT]
C785 – C78F	Perform [RUN]
C790 – C7AC	Perform [GOSUB]
C7AD – C7D9	Perform [GOTO]
C7DA	Perform [RETURN], then:
C7F3 – C80D	Perform [DATA]: skip statement
C80E	Scan for next BASIC statement
C811 – C82F	Scan for next BASIC line
C830	Perform [IF], and perhaps:
C843 – C852	Perform [REM]: skip line
C853 – C872	Perform [ON]
C873 – C8AC	Accept fixed-point number
C8AD – C98A	Perform [LET]
C98B – C990	Perform [PRINT#]
C991 – C9A4	Perform [CMD]
C9A5 – CA1B	Perform [PRINT]
CA1C – CA38	Print string from memory
CA39 – CA4E	Print single format character
CA4F – CA7C	Handle bad input data
CA7D – CAA6	Perform [GET]
CAA7 – CAC0	Perform [INPUT#]
CAC1 – CAF9	Perform [INPUT]
CAFA – CB06	Prompt and receive input
CB07 – CBFB	Perform [READ]
CBFC – CC1F	Canned Input error messages
CC20 – CC78	Perform [NEXT]
CC79 – CC9E	Check type mismatch
CC9F	Evaluate expression
CDEC	Evaluate expr. within ( )
CDF2 – CE02	Check parenthesis, comma
CE03 – CE07	Syntax error exit
CE08 – CE88	Variable name setup
CE89 – CEC7	Set up function references
CEC8 – CEF7	Perform [OR], [AND]
CEF8 – CF5F	Perform comparisons
CF60 – CF6C	Perform [DIM]
CF6D – CFF6	Search for variable
CFF7 – D077	Create new variable
D078 – D088	Setup array pointer
D089 – D08C	32768 in floating binary
D08D – D0AB	Evaluate integer expression
D0AC – D258	Find or make array
D259	Perform [FRE], and:
D26D – D279	Convert fixed-to-floating
D27A – D27F	Perform [POS]
D280 – D28C	Check not Direct
D28D – D2BA	Perform [DEF]
D2BB – D2CD	Check FNx syntax
D2CE – D33E	Evaluate FNx
D33F – D34E	Perform [STR$]
D34F – D360	Do string vector
D361 – D3CD	Scan, set up string
D3CE – D3FF	Allocate space for string
D400 – D516	Garbage collection
D517 – D553	Concatenate
D554 – D57C	Store string
D57D – D5B4	Discard unwanted string
D5B5 – D5C5	Clean descriptor stack
D5C6 – D5D9	Perform [CHR$]
D5DA – D605	Perform [LEFT$]
D606 – D610	Perform [RIGHT$]
D611 – D63A	Perform [MID$]
D63B – D655	Pull string data
D656 – D65B	Perform [LEN]
D65C – D664	Switch string to numeric
D665 – D674	Perform [ASC]
D675 – D686	Get byte parameter
D687 – D6C5	Perform [VAL]
D6C6 – D6D1	Parameters for POKE/WAIT
D6D2 – D6E7	Convert floating-to-fixed
D6E8 – D706	Perform [PEEK]
D707 – D70F	Perform [POKE]
D710 – D72B	Perform [WAIT]
D72C – D732	Add 0.5
D733 – D744	Perform subtraction
D745 – D76D	Microsoft Joke (WAIT 6502)
D76E – D852	Perform addition
D853 – D889	Complement accum#1
D88A – D88E	Overflow exit
D88F – D8C7	Multiply-a-byte
D8C8 – D8f5	Constants
D8F6	Perform [LOG]
D937 – D997	Perform multiplication
D998 – D9C2	Unpack memory into accum#2
D9C3 – D9DF	Test & adjust accumulators
D9E0 – D9ED	Handle overflow and underflow
D9EE – DA04	Multiply by 10
DA05 – DA09	10 in floating binary
DA0A	Divide by 10
DA13	Perform divide–by
DA1E – DAAD	Perform divide–into
DAAE – DAD2	Unpack memory into accum#1
DAD3 – DB07	Pack accum#1 into memory
DB08 – DB17	Move accum#2 to #1
DB18 – DB26	Move accum#1 to #2
DB27 – DB36	Round accum#1
DB37 – DB44	Get accum#1 sign
DB45 – DB63	Perform [SGN]
DB64 – DB66	Perform [ABS]
DB67 – DBA6	Compare accum#1 to memory
DBA7 – DBD7	Floating-to-fixed
DBD8 – DBFE	Perform [INT]
DBFF – DC89	Convert string to floating-point
DC8A – DCBE	Get new ASCII digit
DCBF – DCCD	Constants
DCCE	Print IN, then:
DCD9 – DCE8	Print BASIC line #
DCE9 – DE1C	Convert floating-point to ASCII
DE1D – DE5D	Constants
DE5E	Perform [SQR]
DE68	Perform power function
DEA1 – DEAB	Perform negation
DEAC – DED9	Constants
DEDA – DF2C	Perform [EXP]
DF2D – DF76	Series evaluation
DF77 – DF7E	RND constants
DF7F – DFD7	Perform [RND]
DFD8	Perform [COS]
DFDF – E027	Perform [SIN]
E028 – E053	Perform [TAN]
E054 – E08B	Constants
E08C – E0BB	Perform [ATN]
E0BC – E0F8	Constants
E0F9 – E110	CHRGET sub for zero page
E111 – E115	Initial RND seed
E116 – E1B6	BASIC cold start
E1B7 – E1DD	Power up msg, "bytes free"
E1DE	Init I/O regs and:
E229	Clear screen and:
E257 – E284	Home cursor
E285 – E33E	Input from screen or keyboard
E33F – E34B	Test for quote; test quote flag
E34C – E38A	Set screen print parameters
E38B – E395	Prevent 80–char line getting longer
E396 – E3B3	Turn 40 char line into 80 char line
E3B4 – E3D7	Back into previous line
E3D8 – E518	Handle ASCII char for screen output
E519 – E53E	Go to next screen line
E53F – E5B9	Scroll screen
E5BA – E61A	Open a line on screen
E61B – E62D	Main Interrupt entry
E62E – E6E9	Interrupt: clock, cursor, keyboard
E6EA – E6F7	Output character
E6F8 – E769	Table: keyboard matrix decoder
E76A – E796	MLM sub: output hex digits
E797 – E7A6	MLM sub: swap TMP0 and TMP2
E7A7 – E7F6	MLM sub: input hex digits
E7F7 – E7FF	MLM sub: print '?'
F000 – F0B5	File messages
F0B6 – F127	Send 'Talk', 'Listen', IEEE command
F128 – F135	Send char to IEEE
F136 – F155	Write Timeout, Device Not Present
F156 – F163	Send canned I/O message
F164 – F16E	Send 'Listen', secondary address
F16F – F17E	Send normal (deferred) IEEE char
F17F – F18B	Drop IEEE device
F18C – F1D0	Input byte from IEEE
F1D1 – F1E0	GET a byte
F1E1 – F231	INPUT a byte
F232 – F26D	Output a byte
F26E	Abort files
F284 – F28C	Restore default I/O devices
F28D – F2A8	Find/setup file data
F2A9 – F300	Perform [CLOSE]
F301 – F30E	Test STOP key
F30F – F314	Action STOP key
F315 – F31C	Send message if Direct mode
F31D – F321	Test if Direct mode
F322 – F3C1	Program load subroutine
F3C2 – F409	Perform [LOAD]
F40A – F43D	Print Searching, Loading, Verifying
F43E – F45F	Get Load/Save parameters
F460 – F465	Get a byte parameter
F466 – F493	Send filename to IEEE
F494 – F4B6	Find specific tape header
F4B7 – F4CD	Perform [VERIFY]
F4CE – F50D	Get Open/Close parameters
F50E – F515	Abort if end–of–line
F516 – F520	Check comma, else Syntax Error
F521 – F5A5	Perform [OPEN]
F5A6 – F5D9	Find any tape header
F5DA – F63B	Write tape header
F63C – F655	Get start/end addrs from header
F656 – F66B	Set buffer address
F66C – F683	Set buffer start & end addrs
F684 – F68C	Perform [SYS]
F68D – F69D	Set tape write start & end
F69E – F728	Perform [SAVE]
F729 – F76C	Update clock
F76D – F76F	TI constant: modulus 24 hrs
F770 – F7BB	Connect input device
F7BC – F805	Connect output device
F806 – F811	Bump tape buffer pointer
F812 – F834	Wait for PLAY
F835 – F846	Test cassette switches
F847 – F854	Wait for PLAY AND RECORD
F855	Initiate tape read
F886 – F8E5	Initiate tape write
F8E6 – F8EF	Test I/O complete
F8F0 – F8FF	Test STOP key
F900 – F930	Tape bit timing adjust
F931	Read tape bits
FA57 – FB75	Store tape characters
FB76 – FB7E	Reset tape read address
FB7F – FB83	Flag error into ST
FB84 – FB92	Reset counters for new byte
FB93 – FBAE	Write a bit to tape
FBAF – FC40	Tape write
FC41 – FC7A	Write tape leader
FC7B – FC95	Terminate tape; restore interrupt
FC96 – FCA5	Set interrupt vector
FCA6 – FCB3	Turn off tape motor
FCB4 – FCC5	Checksum calculation
FCC6 – FCD0	Advance load/save pointer
FCD1 – FCFD	Power–on Reset
FCFE – FD10	Table of interrupt vectors
FD11 – FFB0	Machine Language Monitor
FFB1 – FFBF	CBM copyright statement
Jump Table:	
FFC0	OPEN
FFC3	CLOSE
FFC6	Set input device
FFC9	Set output device
FFCC	Restore default I/O devices
FFCF	INPUT a byte
FFD2	Output a byte
FFD5	LOAD
FFD8	SAVE
FFDB	VERIFY
FFDE	SYS
FFE1	Test stop key
FFE4	GET byte
FFE7	Abort all files
FFEA	Update clock
FFED – FFF9	Unused
FFFA – FFFF	Hard vectors: NMI, Reset, IRQ

BASIC 4.0 ROM Routines

Address	Description
B000 – B065	Action addresses for primary keywords
B066 – B093	Action addresses for functions
B094 – B0B1	Hierarchy & action addrs for operators
B0B2 – B20C	Table of BASIC keywords
B20D – B321	BASIC messages, mostly error msgs
B322 – B34F	Search stack for FOR/GOSUB
B350 – B392	Open up space in memory
B393 – B39F	Test: stack too deep?
B3A0 – B3CC	Check available memory
B3CD	Send canned error message, then:
B3FF – B41E	Warm start; wait for BASIC command
B41F – B4B5	Handle new BASIC line input
B4B6 – B4E1	Rebuild chaining of BASIC lines
B4E2 – B4FA	Receive line from keyboard
B4FB – B5A2	Crunch keywords into BASIC tokens
B5A3 – B5D1	Search BASIC for given line number
B5D2	Perform [NEW], and;
B5EC – B621	Perform [CLR]
B622 – B62F	Reset BASIC execution to start
B630 – B6DD	Perform [LIST]
B6DE – B784	Perform [FOR]
B785 – B7B6	Execute BASIC statement
B7B7 – B7C5	Perform [RESTORE]
B7C6 – B7ED	Perform [STOP] or [END]
B7EE – B807	Perform [CONT]
B808 – B812	Perform [RUN]
B813 – B82F	Perform [GOSUB]
B830 – B85C	Perform [GOTO]
B85D	Perform [RETURN], then:
B883 – B890	Perform [DATA]: skip statement
B891	Scan for next BASIC statement
B894 – B8B2	Scan for next BASIC line
B8B3	Perform [IF], and perhaps:
B8C6 – B8D5	Perform [REM]: skip line
B8D6 – B8F5	Perform [ON]
B8F6 – B92F	Accept fixed–point number
B930 – BA87	Perform [LET]
BA88 – BA8D	Perform [PRINT#]
BA8E – BAA1	Perform [CMD]
BAA2 – BB1C	Perform [PRINT]
BB1D – BB39	Print string from memory
BB3A – BB4B	Print single format character
BB4C – BB79	Handle bad input data
BB7A – BBA3	Perform [GET]
BBA4 – BBBD	Perform [INPUT#]
BBBE – BBF4	Perform [INPUT]
BBF5 – BC01	Prompt and receive input
BC02 – BCF6	Perform [READ]
BCF7 – BD18	Canned Input error messages
BD19 – BD71	Perform [NEXT]
BD72 – BD97	Check type mismatch
BD98	Evaluate expression
BEE9	Evaluate expr. within parentheses
BEEF	Check parenthesis, comma
BF00 – BF0B	Syntax error exit
BF8C – C046	Variable name setup
C047 – C085	Set up function references
C086 – C0B5	Perform [OR], [AND]
C0B6 – C11D	Perform comparisons
C11E – C12A	Perform [DIM]
C12B – C1BF	Search for variable
C1C0 – C2C7	Create new variable
C2C8 – C2D8	Setup array pointer
C2D9 – C2DC	32768 in floating binary
C2DD – C2FB	Evaluate integer expression
C2FC – C4A7	Find or make array
C4A8	Perform [FRE], and:
C4BC – C4C8	Convert fixed–to–floating
C4C9 – C4CE	Perform [POS]
C4CF – C4DB	Check not Direct
C4DC – C509	Perform [DEF]
C50A – C51C	Check FNx syntax
C51D – C58D	Evaluate FNx
C58E – C59D	Perform [STR$]
C59E – C5AF	Do string vector
C5B0 – C61C	Scan, set up string
C61D – C669	Allocate space for string
C66A – C74E	Garbage collection
C74F – C78B	Concatenate
C78C – C7B4	Store string
C7B5 – C810	Discard unwanted string
C811 – C821	Clean descriptor stack
C822 – C835	Perform [CHR$]
C836 – C861	Perform [LEFT$]
C862 – C86C	Perform [RIGHT$]
C86D – C896	Perform [MID$]
C897 – C8B1	Pull string data
C8B2 – C8B7	Perform [LEN]
C8B8 – C8C0	Switch string to numeric
C8C1 – C8D0	Perform [ASC]
C8D1 – C8E2	Get byte parameter
C8E3 – C920	Perform [VAL]
C921 – C92C	Parameters for POKE/WAIT
C92D – C942	Convert floating–to–fixed
C943 – C959	Perform [PEEK]
C95A – C962	Perform [POKE]
C963 – C97E	Perform [WAIT]
C97F – C985	Add 0.5
C986	Perform subtraction
C998 – CA7C	Perform addition
CA7D – CAB3	Complement accum#1
CAB4 – CAB8	Overflow exit
CAB9 – CAF1	Multiply–a–byte
CAF2 – CB1F	Constants
CB20	Perform [LOG]
CB5E – CBC1	Perform multiplication
CBC2 – CBEC	Unpack mem. into accum#2
CBED – CC09	Test & adjust accumulators
CC0A – CC17	Handle overflow & underflow
CC18 – CC2E	Multiply by 10
CC2F – CC33	10 in floating binary
CC34	Divide by 10
CC3D	Perform divide–by
CC45 – CCD7	Perform divide–into
CCD8 – CCFC	Unpack mem. into accum#1
CCFD – CD31	Pack accum#1 into memory
CD32 – CD41	Move accum#2 to #1
CD42 – CD50	Move accum#1 to #2
CD51 – CD60	Round accum#1
CD61 – CD6E	Get accum#1 sign
CD6F – CD8D	Perform [SGN]
CD8E – CD90	Perform [ABS]
CD91 – CDD0	Compare accum#1 to memory
CDD1 – CE01	Floating–to–fixed
CE02 – CE28	Perform [INT]
CE29 – CEB3	Convert string to floating–pt
CEB4 – CEE8	Get new ASCII digit
CEE9 – CEF8	Constants
CF78	Print IN, then:
CF7F – CF92	Print BASIC line #
CF93 – D0C6	Convert floating–pt to ASCII
D0C7 – D107	Constants
D108	Perform [SQR]
D112	Perform power function
D14B – D155	Perform negation
D156 – D183	Constants
D184 – D1D6	Perform [EXP]
D1D7 – D220	Series evaluation
D221 – D228	RND constants
D229 – D281	Perform [RND]
D282	Perform [COS]
D289 – D2D1	Perform [SIN]
D2D2 – D2FD	Perform [TAN]
D2FE – D32B	Constants
D32C – D35B	Perform [ATN]
D35C – D398	Constants
D399 – D3B5	CHRGET sub for zero page
D3B6 – D471	BASIC cold start
D472 – D716	Machine Language Monitor
D717 – D7AB	MLM subroutines
D7AC – D802	Perform [RECORD]
D803 – D837	Disk parameter checks
D838 – D872	Dummy disk control msgs
D873 – D919	[CATALOG] or [DIRECTORY]
D91A – D92E	Output
D92F – D941	Find spare secondary address
D942 – D976	Perform [DOPEN]
D977 – D990	Perform [APPEND]
D991 – D9D1	Get disk status
D9D2 – DA06	Perform [HEADER]
DA07 – DA30	Perform [DCLOSE]
DA31 – DA64	Set up disk record
DA65 – DA7D	Perform [COLLECT]
DA7E – DAA6	Perform [BACKUP]
DAA7 – DAC6	Perform [COPY]
DAC7 – DAD3	Perform [CONCAT]
DAD4 – DB0C	Insert command string values
DB0D – DB39	Perform [DSAVE]
DB3A – DB65	Perform [DLOAD]
DB66 – DB98	Perform [SCRATCH]
DB99 – DB9D	Check Direct command
DB9E – DBD6	Query ARE YOU SURE?
DBD7 – DBE0	Print BAD DISK
DBE1 – DBF9	Clear DS$ and ST
DBFA – DC67	Assemble disk command string
DC68 – DE29	Parse BASIC DOS command
DE2C – DE48	Get Device number
DE49 – DE86	Get file name
DE87 – DE9C	Get small variable parameter
**Entry points only for E000–E7FF **	
E000	Register/screen initialization
E0A7	Input from keyboard
E116	Input from screen
E202	Output character
E442	Main Interrupt entry
E455	Interrupt: clock, cursor, keyboard
E600	Exit from Interrupt
F000 – F0D1	File messages
F0D2	Send 'Talk'
F0D5	Send 'Listen'
F0D7	Send IEEE command character
F109 – F142	Send byte to IEEE
F143 – F150	Send byte and clear ATN
F151 – F16B	Option: timeout or wait
F16C – F16F	DEVICE NOT PRESENT
F170 – F184	Timeout on read, clear control lines
F185 – F192	Send canned file message
F193 – F19D	Send byte, clear control lines
F19E – F1AD	Send normal (deferred) IEEE char
F1AE – F1BF	Drop IEEE device
F1C0 – F204	Input byte from IEEE
F205 – F214	GET a byte
F215 – F265	INPUT a byte
F266 – F2A1	Output a byte
F2A2	Abort files
F2A6 – F2C0	Restore default I/O devices
F2C1 – F2DC	Find/setup file data
F2DD – F334	Perform [CLOSE]
F335 – F342	Test STOP key
F343 – F348	Action STOP key
F349 – F350	Send message if Direct mode
F351 – F355	Test if Direct mode
F356 – F400	Program load subroutine
F401 – F448	Perform [LOAD]
F449 – F46C	Print SEARCHING
F46D – F47C	Print LOADING or VERIFYING
F47D – F4A4	Get Load/Save parameters
F4A5 – F4D2	Send name to IEEE
F4D3 – F4F5	Find specific tape header
F4F6 – F50C	Perform [VERIFY]
F50D – F55F	Get Open/Close parameters
F560 – F5E4	Perform [OPEN]
F5E5 – F618	Find any tape header
F619 – F67A	Write tape header
F67B – F694	Get start/end addrs from header
F695 – F6AA	Set buffer address
F6AB – F6C2	Set buffer start & end addrs
F6C3 – F6CB	Perform [SYS]
F6CC – F6DC	Set tape write start & end
F6DD – F767	Perform [SAVE]
F768 – F7AE	Update clock
F7AF – F7FD	Connect input device
F7FE – F84A	Connect output device
F84B – F856	Bump tape buffer pointer
F857 – F879	Wait for PLAY
F87A – F88B	Test cassette switch
F88C – F899	Wait for RECORD
F89A	Initiate tape read
F8CB	Initiate tape write
F8E0 – F92A	Common tape I/O
F92B – F934	Test I/O complete
F935 – F944	Test STOP key
F945 – F975	Tape bit timing adjust
F976 – FA9B	Read tape bits
FA9C – FBBA	Read tape characters
FBBB – FBC3	Reset tape read address
FBC4 – FBC8	Flag error into ST
FBC9 – FBD7	Reset counters for new byte
FBD8 – FBF3	Write a bit to tape
FBF4 – FC85	Tape write
FC86 – FCBF	Write tape leader
FCC0 – FCDA	Terminate tape; restore interrupt
FCDB – FCEA	Set interrupt vector
FCEB – FCF8	Turn off tape motor
FCF9 – FD0A	Checksum calculation
FD0B – FD15	Advance load/save pointer
FD16 – FD4B	Power–on Reset
FD4C – FD5C	Table of interrupt vectors
Jump Table:	
FF93 – FF9E	CONCAT,DOPEN,DCLOSE,RECORD
FF9F – FFAA	HEADER,COLLECT,BACKUP,COPY
FFAB – FFB6	APPEND,DSAVE,DLOAD,CATALOG
FFB7 – FFBC	RENAME,SCRATCH
FFBD	Get disk status
FFC0	OPEN
FFC3	CLOSE
FFC6	Set input device
FFC9	Set output device
FFCC	Restore default I/O devices
FFCF	INPUT a byte
FFD2	Output a byte
FFD5	LOAD
FFD8	SAVE
FFDB	VERIFY
FFDE	SYS
FFE1	Test stop key
FFE4	GET byte
FFE7	Abort all files
FFEA	Update clock
FFED – FFF9	unused
FFFA – FFFF	Hard vectors: NMI, Reset, IRQ

VIC 20 Memory Map

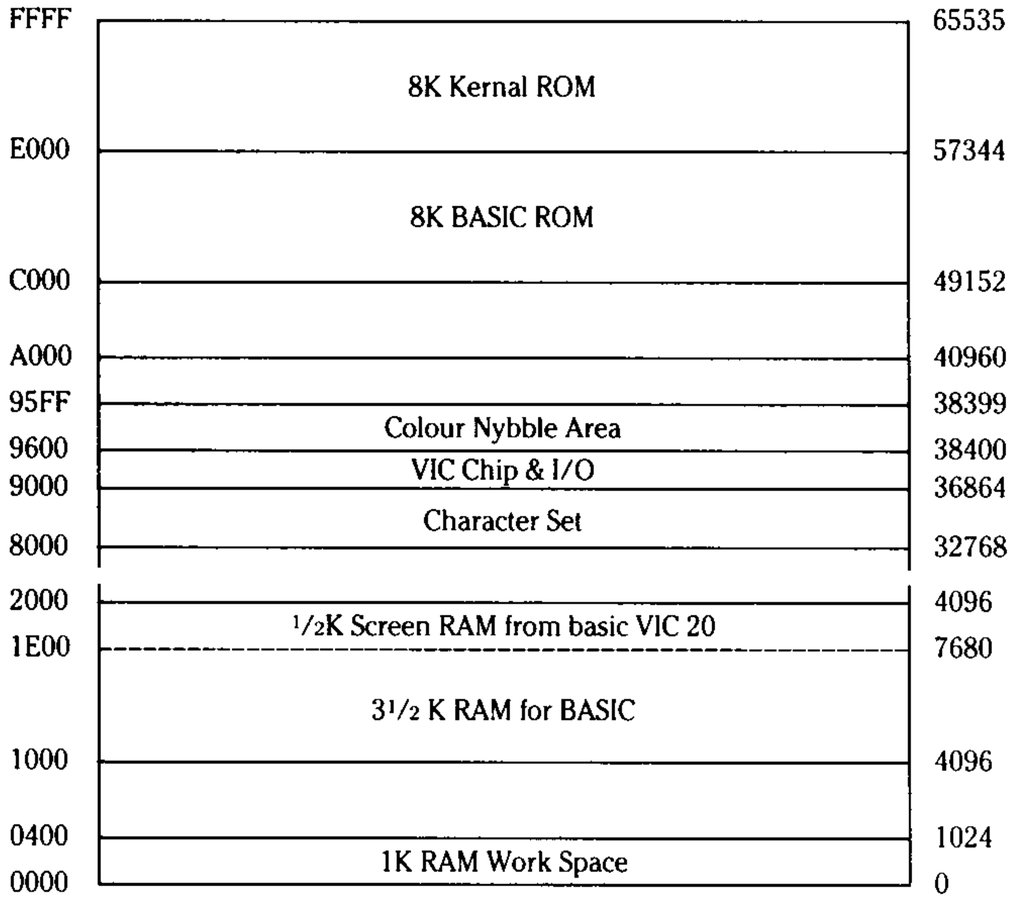
Jim Butterfield, Toronto, Ont.

0000 -0002	0-2	USR jump
0003 -0004	3-4	Float-Fixed vector
0005 -0006	5-6	Fixed-Float vector
0007	7	Search character
0008	8	Scan-quotes flag
0009	9	TAB column save
000A	10	0 = LOAD, 1 = VERIFY
000B	11	Input buffer pointer/# subscrpt
000C	12	Default DIM flag
000D	13	Type: FF = string, 00 = numeric
000E	14	Type: 80 = integer, 00 = floating point
000F	15	DATA scan/LIST quote/memry flag
0010	16	Subscript/FNx flag
0011	17	0 = INPUT;$40 = GET;$98 = READ
0012	18	ATN sign/Comparison eval flag
0013	19	Current I/O prompt flag
0014 -0015	20-21	Integer value
0016	22	**Pointer:** temporary strg stack
0017 -0018	23-24	Last temp string vector
0019 -0021	25-33	Stack for temporary strings
0022 -0025	34-37	Utility pointer area
0026 -002A	38-42	Product area for multiplication
002B -002C	43-44	**Pointer:** Start of BASIC
002D-002E	45-46	**Pointer:** Start of Variables
002F -0030	47-48	**Pointer:** Start of Arrays
0031 -0032	49-50	**Pointer:** End of Arrays
0033 -0034	51-52	**Pointer:** String Storage (moving down)
0035 -0036	53-54	**Pointer:** Utility String
0037 -0038	55-56	**Pointer:** Limit of Memory
0039 -003A	57-58	Current BASIC line number
003B -003C	59-60	Previous BASIC line number
003D-003E	61-62	**Pointer:** BASIC statement for CONT
003F -0040	63-64	Current DATA line number
0041 -0042	65-66	Current DATA address
0043 -0044	67-68	Input vector
0045 -0046	69-70	Current variable name
0047 -0048	71-72	Current variable address
0049 -004A	73-74	Variable pointer for FOR/NEXT
004B -004C	75-76	Y-save; op-save; BASIC pointer save
004D	77	Comparison symbol accumulator
004E -0053	78-83	Misc work area, pointers, etc
0054 -0056	84-86	Jump vector for functions
0057 -0060	87-96	Misc numeric work area
0061	97	Accum#1: Exponent
0062 -0065	98-101	Accum#1: Mantissa
0066	102	Accum#1: Sign
0067	103	Series evaluation constant pointer
0068	104	Accum#1 hi-order (overflow)
0069	105	Accum#2: Exponent
006A -006D	106-109	Accum#2: Mantissa
006E	110	Accum#2: Sign
006F	111	Sign comparison, Acc#1 vs #2
0070	112	Accum#1 lo-order (rounding)
0071 -0072	113-114	Cassette buff len/Series pointer
0073 -008A	115-138	CHRGET subroutine; get BASIC char
007A -007B	122-123	BASIC pointer (within subrtn)
008B -008F	139-143	RND seed value
0090	144	Status word ST
0091	145	Keyswitch PIA: STOP and RVS flags
0092	146	Timing constant for tape
0093	147	Load = 0, Verify = 1
0094	148	Serial output: deferred char flag
0095	149	Serial deferred character
0096	150	Tape EOT received
0097	151	Register save
0098	152	How many open files
0099	153	Input device, normally 0
009A	154	Output CMD device, normally 3
009B	155	Tape character parity
009C	156	Byte-received flag
009D	157	Direct = $80/RUN = 0 output control
009E	158	Tp Pass 1 error log/char buffer
009F	159	Tp Pass 2 err log corrected
00A0 -00A2	160-162	Jiffy Clock HML
00A3	163	Serial bit count/EOI flag
00A4	164	Cycle count
00A5	165	Countdown,tape write/bit count
00A6	166	Tape buffer pointer
00A7	167	Tp Wrt ldr count/Rd pass/inbit
00A8	168	Tp Wrt new byte/Rd error/inbit cnt
00A9	169	Wrt start bit/Rd bit err/stbit
00AA	170	Tp Scan;Cnt;Ld;End/byte assy
00AB	171	Wr lead length/Rd checksum/parity
00AC-00AD	172-173	**Pointer:** tape bufr, scrolling
00AE-00AF	174-175	Tape end adds/End of program
00B0 -00B1	176-177	Tape timing constants
00B2 -00B3	178-179	**Pointer:** Start of Tape Buffer
00B4	180	1 = Tp timer enabled; bit cnt
00B5	181	Tp EOT/RS232 next bit to send
00B6	182	Read character error/outbyte buf
00B7	183	# characters in file name
00B8	184	Current logical file
00B9	185	Current secndy address
00BA	186	Current device
00BB-00BC	187-188	Pointer to file name
00BD	189	Wr shift word/Rd input char
00BE	190	# blocks remaining to Wr/Rd
00BF	191	Serial word buffer
00C0	192	Tape motor interlock
00C1 -00C2	193-194	I/O start adds
00C3 -00C4	195-196	Kernel setup pointer
00C5	197	Last key pressed
00C6	198	# chars in keybd buffer
00C7	199	Screen reverse flag
00C8	200	End-of-line for input pointer
00C9 -00CA	201-202	Input cursor log (row, column)
00CB	203	Which key: 64 if no key
00CC	204	0 = flash cursor
00CD	205	Cursor timing countdown
00CE	206	Character under cursor
00CF	207	Cursor in blink phase
00D0	208	Input from screen/from keyboard
00D1 -00D2	209-210	Pointer to screen line
00D3	211	Position of cursor on above line
00D4	212	0 = direct cursor, else programmed
00D5	213	Current screen line length
00D6	214	Row where curosr lives
00D7	215	Last inkey/checksum/buffer
00D8	216	# of INSERTs outstanding
00D9 -00F0	217-240	Screen line link table
00F1	241	Dummy screen link
00F2	242	Screen row marker
00F3 -00F4	243-244	Screen color pointer
00F5 -00F6	245-246	Keyboard pointer
00F7 -00F8	247-248	RS-232 Rcv pntr
00F9 -00FA	249-250	RS-232 Tx pntr
00FF -010A	256-266	Floating to ASCII work area
0100 -013E	256-318	Tape error log
0100 -01FF	256-511	Processor stack area
0200 -0258	512-600	BASIC input buffer
0259 -0262	601-610	Logical file table
0263 -026C	611-620	Device # table
026D-0276	621-630	Sec Adds table
0277 -0280	631-640	Keybd buffer
0281 -0282	641-642	Start of BASIC Memory
0283 -0284	643-644	Top of BASIC Memory
0285	645	Serial bus timeout flag
0286	646	Current colour code
0287	647	Colour under cursor
0288	648	Screen memory page
0289	649	Max size of keybd buffer
028A	650	Repeat all keys
028B	651	Repeat speed counter
028C	652	Repeat delay counter
028D	653	Keyboard Shift/Control flag
028E	654	Last shift pattern
028F -0290	655-656	Keyboard table settup pointer
0291	657	Keymode (Kattacanna)
0292	658	0 = scroll enable
0293	659	VIC chip control
0294	660	VIC chip command
0295 -0296	661-662	Bit timing
0297	663	RS-232 status
0298	664	# bits to send
0299 -029A	665-666	RS-232 speed/code
029B	667	RS232 receive pointer
029C	668	RS232 input pointer
029D	669	RS232 transmit pointer
029E	670	RS232 output pointer
029F -02A0	671-672	IRQ save during tape I/O
0300 -0301	768-769	Error message link
0302 -0303	770-771	BASIC warm start link
0304 -0305	772-773	Crunch BASIC tokens link
0306 -0307	774-775	Print tokens link
0308 -0309	776-777	Start new BASIC code link
030A -030B	778-779	Get arithmetic element link
030C -0313	780-787	Unused
0314 -0315	788-789	Hardware interrupt vector (EABF)
0316 -0317	790-791	Break interrupt vector (FED2)
0318 -0319	792-793	NMI interrupt vector (FEAD)
031A -031B	794-795	OPEN vector (F40A)
031C -031D	796-797	CLOSE vector (F34A)
031E -031F	798-799	Set-input vector (F2C7)
0320 -0321	800-801	Set-output vector (F309)
0322 -0323	802-803	Restore I/O vector (F3F3)
0324 -0325	804-805	INPUT vector (F20E)
0326 -0327	806-807	Output vector (F27A)
0328 -0329	808-809	Test-STOP vector (F770)
032A -032B	810-811	GET vector (F1F5)
032C -032D	812-813	Abort I/O vector (F3EF)
032E -032F	814-815	USR vector (FED2)
0330 -0331	816-817	LOAD link (F549)
0332 -0333	818-819	SAVE link (F685)
033C -03FB	828-1019	Cassette buffer
03FC -03FF	1020-1023	Unused
0400 -0FFF	1024-4095	3K RAM expansion area
1000 -1DFF	4096-7679	Normal BASIC memory
1E00 -1FF9	7680-8191	Normal Screen memory
1000 -11F9	4096-4601	Screen memory w/expansion
1200 -	4608-	BASIC memory w/expansion
2000 -7FFF	8192-32767	Memory expansion area
8000 -8FFF	32768-36863	Character bit maps
9000 -900F	36864-36879	Video Interface Chip
9110 -912F	37136-37151	VIA Interface - NMI
9120 -912F	37152-37167	VIA Interface - IRQ
9400 -95FF	37888-38399	Alternate Colour Nybble area
9600 -97FF	38400-38911	Main Colour Nybble area
A000 -BFFF	40960-49151	Plug-in ROM area
C000 -FFFF	49152-65535	ROM: BASIC and Operating System
FF8A -FFF5	65418-65525	Jump Table, Including:
FFC6		Set Input channel
FFC9		Set Output channel
FFCC		Restore default I/O channels
FFCF		INPUT
FFD2		PRINT
FFE1		Test Stop key
FFE4		GET

VIC 20 ROM Routines

C000	ROM control vectors
C00C	Keyword action vectors
C052	Function vectors
C080	Operator vectors
C09E	Keywords
C19E	Error messages
C328	Error message vectors
C365	Miscellaneous messages
C38A	Scan stack for FOR/GOSUB
C3B8	Move memory
C3FB	Check stack depth
C408	Check memory space
C435	'OUT OF MEMORY'
C437	Error routine
C469	Break entry
C474	'READY.'
C480	Ready for BASIC
C49C	Handle new line
C533	Re-chain lines
C560	Receive input line
C579	Crunch tokens
C613	Find BASIC line
C642	Perform [NEW]
C65E	Perform [CLR]
C68E	Back up text pointer
C69C	Perform [LIST]
C742	Perform [FOR]
C7ED	Execute statement
C81D	Perform [RESTORE]
C82C	Break
C82F	Perform [STOP]
C831	Perform [END]
C857	Perform [CONT]
C871	Perform [RUN]
C883	Perform [GOSUB]
C8A0	Perform [GOTO]
C8D2	Perform [RETURN]
C8F8	Perform [DATA]
C906	Scan for next statement
C928	Perform [IF]
C93B	Perform [REM]
C94B	Perform [ON]
C96B	Get fixed point number
C9A5	Perform [LET]
CA80	Perform [PRINT#]
CA86	Perform [CMD]
CAA0	Perform [PRINT]
CB1E	Print message from (y,a)
CB3B	Print format character
CB4D	Bad-input routines
CB7B	Perform [GET]
CBA5	Perform [INPUT#]
CBBF	Perform [INPUT]' '
CBF9	Prompt & input'
CC06	Perform [READ]
CCFC	Input error messages
CD1E	Perform [NEXT]
CD78	Type-match check
CD9E	Evaluate expression
CEA8	Constant - PI
CEF1	Evaluate within brackets
CEF7	Check for ')'
CEFF	Check for comma
CF08	Syntax error
CF14	Check range
CF28	Search for variable
CFA7	Set up FN reference
CFE6	Perform [OR]
CFE9	Perform [AND]
D016	Compare
D081	Perform [DIM]
D08B	Locate variable
D113	Check alphabetic
D11D	Create variable
D194	Array pointer subroutine
D1A5	Value 32768
D1B2	Float-fixed conversion
D1D1	Set up array
D245	'BAD SUBSCRIPT'
D248	'ILLEGAL QUANTITY'
D34C	Compute array size
D37D	Perform [FRE]
D391	Fixed-float conversion
D39E	Perform [POS]
D3A6	Check direct
D3B3	Perform [DEF]
D3E1	Check FN syntax
D3F4	Perform [FN]
D465	Perform [STR$]
D475	Calculate string vector
D487	Set up string
D4F4	Make room for string
D526	Garbage collection
D5BD	Check salvageability
D606	Collect string
D63D	Concatenate
D67A	Build string to memory
D6A3	Discard unwanted string
D6DB	Clean descriptor stack
D6EC	Perform [CHR$]
D700	Perform [LEFT$]
D72C	Perform [RIGHT$]
D737	Perform [MID$]
D761	Pull string parameters
D77C	Perform [LEN]
D782	Exit string-mode
D78B	Perform [ASC]
D79B	Input byte parameter
D7AD	Perform [VAL]
D7EB	Get params for POKE/WAIT
D7F7	Float-fixed
D80D	Perform [PEEK]
D824	Perform [POKE]
D82D	Perform [WAIT]
D849	Add 0.5
D850	Subtract-from
D853	Perform [SUBTRACT]
D86A	Perform [ADD]
D947	Complement fac#1
D97E	'OVERFLOW'
D983	Multiply by zero byte
D9EA	Perform [LOG]
DA2B	Perform [MULTIPLY]
DA59	Multiply-a-bit
DA8C	Memory to FAC#2
DAB7	Adjust FAC#1/#2
DAD4	Underflow/overflow
DAE2	Multiply by 10
DAF9	+ 10 in floating pt
DAFE	Divide by 10
DB12	Perform [DIVIDE]
DBA2	Memory to fac#1
DBC7	FAC#1 to memory
DBFC	FAC#2 to fac#1
DC0C	FAC#1 to FAC#2
DC1B	Round FAC#1
DC2B	Get sign
DC39	Perform [SGN]
DC58	Perform [ABS]
DC5B	Compare FAC#1 to mem
DC9B	Float-fixed
DCCC	Perform [INT]
DCF3	String to fac
DD7E	Get ASCII digit
DDDD	Float to ASCII
DF16	Decimal constants
DF3A	TI constants
DF71	Perform [SQR]
DF7B	Perform [POWER]
DFB4	Perform [NEGATIVE]
DFED	Perform [EXP]
E040	Series evaluate 1
E056	Series evaluate 2
E094	Perform [RND]
E0f6	?? Breakpoints ??
E127	Perform [SYS]
E153	Perform [SAVE]
E162	Perform [VERIFY]
E165	Perform [LOAD]
E1BB	Perform [OPEN]
E1C4	Perform [CLOSE]
E1D1	Parameters for LOAD/SAVE
E203	Check default parameters
E20B	Check for comma
E216	Parameters for open/close
E261	Perform [COS]
E268	Perform [SIN]
E2b1	Perform [TAN]
E30B	Perform [ATN]
E378	Initialize
E387	CHRGET for zero page
E3A4	Initialize BASIC
E429	Power-up message
E44F	Vectors for $300
E45B	Initialize vectors
E467	Warm restart
E476	Program patch area
E4A0	Serial output '1'
E4A9	Serial output '0'
E4B2	Get serial input & clock
E4BC	Program patch area
E500	Set 6522 addrs
E505	Set screen limits
E50A	Track cursor location
E518	Initalize I/O
E54C	Normalize screen
E55F	Clear screen
E581	Home cursor
E587	Set screen pointers
E5BB	Set I/O defaults
E5C3	Set VIC chip defaults
E5CF	Input from keyboard
E64F	Input from screen
E6B8	Quote mark test
E6C5	Set up screen print
E6EA	Advance cursor
E715	Retreat cursor
E72D	Back into previous line
E742	Output to screen
E8C3	Go to next line
E8D8	Do 'RETURN'
E8E8	Check line decrement
E8FA	Check line increment
E912	Set colour code
E921	Colour code table
E929	Code conversion
E975	Scroll screen
E9EE	Open space on screen
EA56	Move screen line
EA6E	Synch colour transfer
EA7E	Set start-of-line
EA8D	Clear screen line
EAA1	Print to screen
EAAA	Store on screen
EAB2	Synch colour to char
EABF	Interrupt (IRQ)
EB1E	Check keyboard
EC00	Set text mode
EC46	Keyboard vectors
EC5E	Keyboard maps
ED21	Graphics/text control
ED30	Set graphics mode
ED5B	Wrap up screen line
ED6A	Shifted key matrix
EDA3	Control key matrix
EDE4	VIC chip defaults
EDFD	Screen line adds low
EE14	Send 'talk'
EE17	Send 'listen'
EE1C	Send control char
EE49	Send to serial bus
EEB7	Timeout on serial
EEC0	Send listen SA
EEC5	Clear ATN
EECE	Send talk SA
EEE4	Send serial deferred
EEF6	Send 'untalk'
EF04	Send 'unlisten'
EF19	Receive from serial bus
EF84	Clock line on
EF8D	Clock line off
EF96	Delay 1 ms
EFA3	RS232 send (NMI)
EFEE	New RS232 byte send
F016	Error or quit
F027	Compute bit count
F036	RS232 receive (NMI)
F05B	Setup to receive
F09D	Receive parity error
F0A2	Receive overrun error
F0A5	Receive break error
F0A8	Receive frame error
F0B9	Bad device
F0BC	File to RS232
F0ED	Send to RS232 buffer
F116	Input from RS232 buffer
F14F	Get from RS232 buffer
F160	Check serial bus idle
F174	Messages
F1E2	Print if direct
F1F5	Get..
F205	..from RS232
F20E	Input
F250	Get.. tape/serial/RS232
F27A	Output..
F290	..to tape
F2C7	Set input device
F309	Set output device
F34A	Close
F3CF	Find file
F3DF	Set file values
F3EF	Abort all files
F3F3	Restore default I/O
F40A	Do file opening
F495	Send SA
F4C7	Open RS232
F542	LOAD program
F647	'SEARCHING'
F659	Print file name
F66A	'LOADING/VERIFYING'
F675	SAVE program
F728	'SAVING'
F734	Bump clock
F760	Get time
F767	Set time
F770	Action stop key
F77E	File Error Messages
F7AF	Find any tape header
F7E7	Write tape header
F84D	Get buffer address
F854	Set buffer start, end pointers
F867	Find specific header
F88A	Bump tape pointer
F894	'PRESS PLAY .. '
F8AB	Check cassette status
F8B7	'PRESS RECORD ..'
F8C0	Initiate tape read
F8E3	Initiate tape write
F8F4	Common tape read/write
F94B	Check tape stop
F95D	Set timing
F98E	Read bits (IRQ)
FAAD	Store characters
FBD2	Reset pointer
FBDB	New tape character setup
FBEA	Toggle tape
FC06	Data write
FC0B	Tape write (IRQ)
FC95	Leader write (IRQ)
FCCF	Restore vectors
FCF6	Set vector
FD08	Kill motor
FD11	Check read/write pointer
FD1B	Bump read/write pointer
FD22	Powerup entry
FD3F	Check A-ROM
FD52	Set Kernal2
FD8D	Initialize system constants
FDF1	IRQ vectors
FDF9	Initialize I/O regs
FE49	Save data name
FE50	Save file details
FE57	Get status
FE66	Flag ST
FE6F	Set timeout
FE73	Read/set top of memory
FE82	Read/set bottom of memory
FE91	Test memory location
FEA9	NMI interrupt entry
FED2	RESET/STOP warm start
FEDE	NMI RS232 sequences
FF56	Restore & exit
FF5C	RS232 timing table
FF72	Main IRQ entry
FF8A	Jumbo jump table
FFFA	Hardware vectors

VIC 20 Standard Configuration



VIC 20 Expansion RAM Memory Changes

Exp RAM at:	BASIC Text	Screen	Colour Table

Commodore 64 Memory Map

Jim Butterfield, Toronto, Ont.

0000	0	Chip directional register
0001	1	Chip I/O; memory & tape control
0003 - 0004	3-4	Float-Fixed vector
0005 - 0006	5-6	Fixed-Float vector
0007	7	Search character
0008	8	Scan-quotes flag
0009	9	TAB column save
000A	10	0 = LOAD, 1 = VERIFY
000B	11	Input buffer pointer/* subscrpt
000C	12	Default DIM flag
000D	13	Type: FF = string, 00 = numeric
000E	14	Type: 80 = integer, 00 = floating point
000F	15	DATA scan/LIST quote/memry flag
0010	16	Subscript/FNx flag
0011	17	0 = INPUT;$40 = GET;$98 = READ
0012	18	ATN sign/Comparison eval flag
0013	19	Current I/O prompt flag
0014 - 0015	20-21	Integer value
0016	22	**Pointer:** temporary string stack
0017 - 0018	23-24	Last temp string vector
0019 - 0021	25-33	Stack for temporary strings
0022 - 0025	34-37	Utility pointer area
0026 - 002A	38-42	Product area for multiplication
002B - 002C	43-44	**Pointer:** Start of BASIC
002D - 002E	45-46	**Pointer:** Start of Variables
002F - 0030	47-48	**Pointer:** Start of Arrays
0031 - 0032	49-50	**Pointer:** End of Arrays
0033 - 0034	51-52	**Pointer:** String Storage (moving down)
0035 - 0036	53-54	**Pointer:** Utility String
0037 - 0038	55-56	**Pointer:** Limit of Memory
0039 - 003A	57-58	Current BASIC line number
003B - 003C	59-60	Previous BASIC line number
003D - 003E	61-62	**Pointer:** BASIC statement for CONT
003F - 0040	63-64	Current DATA line number
0041 - 0042	65-66	Current DATA address
0043 - 0044	67-68	Input vector
0045 - 0046	69-70	Current variable name
0047 - 0048	71-72	Current variable address
0049 - 004A	73-74	Variable pointer for FOR/NEXT
004B - 004C	75-76	Y-save; op-save; BASIC pointer save
004D	77	Comparison symbol accumulator
004E - 0053	78-83	Misc work area, pointers, etc
0054 - 0056	84-86	Jump vector for functions
0057 - 0060	87-96	Misc numeric work area
0061	97	Accum*1: Exponent
0062 - 0065	98-101	Accum*1: Mantissa
0066	102	Accum*1: Sign
0067	103	Series evaluation constant pointer
0068	104	Accum*1 hi-order (overflow)
0069	105	Accum*2: Exponent, etc.
006A - 006D	106-109	Accum*2: Mantissa
006E	110	Accum*2: Exponent, etc.
006F	111	Sign comparison, Acc*1 vs *2
0070	112	Accum*1 lo-order (rounding)
0071 - 0072	113-114	Cassette buff len/Series pointer
0073 - 008A	115-138	CHRGET subroutine; get BASIC char
007A - 007B	122-123	BASIC pointer (within subrtn)
008B - 008F	139-143	RND seed value
0090	144	Status word ST
0091	145	Keyswitch PIA: STOP and RVS flags
0092	146	Timing constant for tape
0093	147	Load = 0, Verify = 1
0094	148	Serial output: deferred char flag
0095	149	Serial deferred character
0096	150	Tape EOT received
0097	151	Register save
0098	152	How many open files
0099	153	Input device, normally 0
009A	154	Output CMD device, normally 3
009B	155	Tape character parity
009C	156	Byte-received flag
009D	157	Direct = $80/RUN = 0 output control
009E	158	Tp Pass 1 error log/char buffer
009F	159	Tp Pass 2 err log corrected
00A0 - 00A2	160-162	Jiffy Clock HML
00A3	163	Serial bit count/EOI flag
00A4	164	Cycle count
00A5	165	Countdown,tape write/bit count
00A6	166	Tape buffer pointer
00A7	167	Tp Wrt ldr count/Rd pass/inbit
00A8	168	Tp Wrt new byte/Rd error/inbit cnt
00A9	169	Wrt start bit/Rd bit err/stbit
00AA	170	Tp Scan;Cnt;Ld;End/byte assy
00AB	171	Wr lead length/Rd checksum/parity
00AC - 00AD	172-173	**Pointer:** tape bufr, scrolling
00AE - 00AF	174-175	Tape end adds/End of program
00B0 - 00B1	176-177	Tape timing constants
00B2 - 00B3	178-179	**Pointer:** Start of Tape Buffer
00B4	180	1 = Tp timer enabled; bit count
00B5	181	Tp EOT/RS232 next bit to send
00B6	182	Read character error/outbyte buf
00B7	183	* characters in file name
00B8	184	Current logical file
00B9	185	Current secndy address
00BA	186	Current device
00BB - 00BC	187-188	Pointer to file name
00BD	189	Wr shift word/Rd input char
00BE	190	* blocks remaining to Wr/Rd
00BF	191	Serial word buffer
00C0	192	Tape motor interlock
00C1 - 00C2	193-194	I/O start address
00C3 - 00C4	195-196	Kernel setup pointer
00C5	197	Last key pressed
00C6	198	* chars in keybd buffer
00C7	199	Screen reverse flag
00C8	200	End-of-line for input pointer
00C9 - 00CA	201-202	Input cursor log (row, column)
00CB	203	Which key: 64 if no key
00CC	204	0 = flash cursor
00CD	205	Cursor timing countdown
00CE	206	Character under cursor
00CF	207	Cursor in blink phase
00D0	208	Input from screen/from keyboard
00D1 - 00D2	209-210	Pointer to screen line
00D3	211	Position of cursor on above line
00D4	212	0 = direct cursor, else programmed
00D5	213	Current screen line length
00D6	214	Row where curosr lives
00D7	215	Last inkey/checksum/buffer
00D8	216	* of INSERTs outstanding
00D9 - 00F2	217-242	Screen line link table
00F3 - 00F4	243-244	Screen colour pointer
00F5 - 00F6	245-246	Keyboard pointer
00F7 - 00F8	247-248	RS-232 Rcv pntr
00F9 - 00FA	249-250	RS-232 Tx pntr
00FF - 010A	256-266	Floating to ASCII work area
0100 - 013E	256-318	Tape error log
0100 - 01FF	256-511	Processor stack area
0200 - 0258	512-600	BASIC input buffer
0259 - 0262	601-610	Logical file table
0263 - 026C	611-620	Device * table
026D - 0276	621-630	Sec Adds table
0277 - 0280	631-640	Keyboard buffer
0281 - 0282	641-642	Start of BASIC Memory
0283 - 0284	643-644	Top of BASIC Memory
0285	645	Serial bus timeout flag
0286	646	Current colour code
0287	647	Colour under cursor
0288	648	Screen memory page
0289	649	Max size of keybd buffer
028A	650	Repeat all keys
028B	651	Repeat speed counter
028C	652	Repeat delay counter
028D	653	Keyboard Shift/Control flag
028E	654	Last shift pattern
028F - 0290	655-656	Keyboard table setup pointer
0291	657	Keyboard shift mode
0292	658	0 = scroll enable
0293	659	RS-232 control reg
0294	660	RS-232 command reg
0295 - 0296	661-662	Bit timing
0297	663	RS-232 status
0298	664	* bits to send
0299 - 029A	665-666	RS-232 speed/code
029B	667	RS232 receive pointer
029C	668	RS232 input pointer
029D	669	RS232 transmit pointer
029E	670	RS232 output pointer
029F - 02A0	671-672	IRQ save during tape I/O
02A1	673	CIA 2 (NMI) Interrupt Control
02A2	674	CIA 1 Timer A control log
02A3	675	CIA 1 Interrupt Log
02A4	676	CIA 1 Timer A enabled flag
02A5	677	Screen row marker
02C0 - 02FE	704-766	(Sprite 11)
0300 - 0301	768-769	Error message link
0302 - 0303	770-771	BASIC warm start link
0304 - 0305	772-773	Crunch BASIC tokens link
0306 - 0307	774-775	Print tokens link
0308 - 0309	776-777	Start new BASIC code link
030A - 030B	778-779	Get arithmetic element link
030C	780	SYS A-reg save
030D	781	SYS X-reg save
030E	782	SYS Y-reg save
030F	783	SYS status reg save
0310 - 0312	784-785	USR function jump (B248)
0314 - 0315	788-789	Hardware interrupt vector (EA31)
0316 - 0317	790-791	Break interrupt vector (FE66)
0318 - 0319	792-793	NMI interrupt vector (FE47)
031A - 031B	794-795	OPEN vector (F34A)
031C - 031D	796-797	CLOSE vector (F291)
031E - 031F	798-799	Set-input vector (F20E)
0320 - 0321	800-801	Set-output vector (F250)
0322 - 0323	802-803	Restore I/O vector (F333)
0324 - 0325	804-805	INPUT vector (F157)
0326 - 0327	806-807	Output vector (F1CA)
0328 - 0329	808-809	Test-STOP vector (F6ED)
032A - 032B	810-811	GET vector (F13E)
032C - 032D	812-813	Abort I/O vector (F32F)
032E - 032F	814-815	Warm start vector (FE66)
0330 - 0331	816-817	LOAD link (F4A5)
0332 - 0333	818-819	SAVE link (F5ED)
033C - 03FB	828-1019	Cassette buffer
0340 - 037E	832-894	(Sprite 13)
0380 - 03BE	896-958	(Sprite 14)
03C0 - 03FE	960-1022	(Sprite 15)
0400 - 07F7	1024-2039	Screen memory (default)
07F8 - 07FF	2040-2047	Sprite Pointers (default)
0800 - 9FFF	2048-40959	BASIC ROM memory
8000 - 9FFF	32768-40959	Alternate: ROM plug-in area
A000 - BFFF	40960-49151	ROM: BASIC
A000 - BFFF	49060-59151	Alternate: RAM
C000 - CFFF	49152-53247	RAM memory, including alternate
D000 - D02E	53248-53294	Video Chip (6566)
D400 - D41C	54272-54300	Sound Chip (6581 SID)
D800 - DBFF	55296-56319	Colour nybble memory
DC00 - DC0F	56320-56335	Interface chip 1, IRQ (6526 CIA)
DD00 - DD0F	56576-56591	Interface chip 2, NMI (6526 CIA)
D000 - DFFF	53248-53294	Alternate: Character set
E000 - FFFF	57344-65535	ROM: Operating System
E000 - FFFF	57344-65535	Alternate: RAM
FF81 - FFF5	65409-65525	Jump Table, Including:
FFC6		Set Input channel
FFC9		Set Output channel
FFCC		Restore default I/O channels
FFCF		INPUT
FFD2		PRINT
FFE1		Test Stop key
FFE4		GET

Commodore 64 ROM Routines

A000	ROM control vectors
A00C	Keyword action vectors
A052	Function vectors
A080	Operator vectors
A09E	Keywords
A19E	Error messages
A328	Error message vectors
A365	Misc messages
A38A	Scan stack for FOR/GOSUB
A3B8	Move memory
A3FB	Check stack depth
A408	Check memory space
A435	'out of memory'
A437	Error routine
A469	BREAK entry
A474	'ready.'
A480	Ready for BASIC
A49C	Handle new line
A533	Re-chain lines
A560	Receive input line
A579	Crunch tokens
A613	Find BASIC line
A642	Perform [NEW]
A65E	Perform [CLR]
A68E	Back up text pointer
A69C	Perform [LIST]
A742	Perform [FOR]
A7ED	Execute statement
A81D	Perform [RESTORE]
A82C	Break
A82F	Perform [STOP]
A831	Perform [END]
A857	Perform [CONT]
A871	Perform [RUN]
A883	Perform [GOSUB]
A8A0	Perform [GOTO]
A8D2	Perform [RETURN]
A8F8	Perform [DATA]
A906	Scan for next statement
A928	Perform [IF]
A93B	Perform [REM]
A94B	Perform [ON]
A96B	Get fixed point number
A9A5	Perform [LET]
AA80	Perform [PRINT*]
AA86	Perform [CMD]
AAA0	Perform [PRINT]
AB1E	Print string from (y,a)
AB3B	Print format character
AB4D	Bad input routine
AB7B	Perform [GET]
ABA5	Perform [INPUT*]
ABBF	Perform [INPUT]
ABF9	Prompt & input
AC06	Perform [READ]
ACFC	Input error messages
AD1E	Perform [NEXT]
AD78	Type match check
AD9E	Evaluate expression
AEA8	Constant - PI
AEF1	Evaluate within brackets
AEF7	')'
AEFF	comma..
AF08	Syntax error
AF14	Check range
AF28	Search for variable
AFA7	Setup FN reference
AFE6	Perform [OR]
AFE9	Perform [AND]
B016	Compare
B081	Perform [DIM]
B08B	Locate variable
B113	Check alphabetic
B11D	Create variable
B194	Array pointer subroutine
B1A5	Value 32768
B1B2	Float-fixed conversion
B1D1	Set up array
B245	'BAD SUBSCRIPT'
B248	'ILLEGAL QUANTITY'
B34C	Compute array size
B37D	Perform [FRE]
B391	Fix-float conversion
B39E	Perform [POS]
B3A6	Check direct
B3B3	Perform [DEF]
B3E1	Check FN syntax
B3F4	Perform [FN]
B465	Perform [STR$]
B475	Calculate string vector
B487	Set up string
B4F4	Make room for string
B526	Garbage collection
B5BD	Check salvageability
B606	Collect string
B63D	Concatenate
B67A	Build string to memory
B6A3	Discard unwanted string
B6DB	Clean descriptor stack
B6EC	Perform [CHR$]
B700	Perform [LEFT$]
B72C	Perform [RIGHT$]
B737	Perform [MID$]
B761	Pull string parameters
B77C	Perform [LEN]
B782	Exit string-mode
B78B	Perform [ASC]
B79B	Input byte parameter
B7AD	Perform [VAL]
B7EB	Parameters for POKE/WAIT
B7F7	Float-fixed
B80D	Perform [PEEK]
B824	Perform [POKE]
B82D	Perform [WAIT]
B849	Add 0.5
B850	Subtract-from
B853	Perform [subtract]
B86A	Perform [add]
B947	Complement FAC*1
B97E	'overflow'
B983	Multiply by zero byte
B9EA	Perform [LOG]
BA2B	Perform [multiply]
BA59	Multiply-a-bit
BA8C	Memory to FAC*2
BAB7	Adjust FAC*1/*2
BAD4	Underflow/overflow
BAE2	Multiply by 10
BAF9	+ 10 in floating pt
BAFE	Divide by 10
BB12	Perform [divide]
BBA2	Memory to FAC*1
BBC7	FAC*1 to memory
BBFC	FAC*2 to FAC*1
BC0C	FAC*1 to FAC*2
BC1B	Round FAC*1
BC2B	Get sign
BC39	Perform [SGN]
BC58	Perform [ABS]
BC5B	Compare FAC*1 to mem
BC9B	Float-fixed
BCCC	Perform [INT]
BCF3	String to FAC
BD7E	Get ASCII digit
BDC2	Print 'IN..'
BDCD	Print line number
BDDD	Float to ASCII
BF16	Decimal constants
BF3A	TI constants
BF71	Perform [SQR]
BF7B	Perform [power]
BFB4	Perform [negative]
BFED	Perform [EXP]
E043	Series eval 1
E059	Series eval 2
E097	Perform [RND]
E0f9	?? breakpoints ??
E12A	Perform [SYS]
E156	Perform [SAVE]
E165	Perform [VERIFY]
E168	Perform [LOAD]
E1BE	Perform [OPEN]
E1C7	Perform [CLOSE]
E1D4	Parameters for LOAD/SAVE
E206	Check default parameters
E20E	Check for comma
E219	Parameters for open/close
E264	Perform [COS]
E26B	Perform [SIN]
E2B4	Perform [TAN]
E30E	Perform [ATN]
E37B	Warm restart
E394	Initialize
E3A2	CHRGET for zero page
E3BF	Initialize BASIC
E447	Vectors for $300
E453	Initialize vectors
E45F	Power-up message
E500	Get I/O address
E505	Get screen size
E50A	Put/get row/column
E518	Initialize I/O
E544	Clear screen
E566	Home cursor
E56C	Set screen pointers
E5A0	Set I/O defaults
E5B4	Input from keyboard
E632	Input from screen
E684	Quote test
E691	Setup screen print
E6B6	Advance cursor
E6ED	Retreat cursor
E701	Back into previous line
E716	Output to screen
E87C	Go to next line
E891	Perform <return>
E8A1	Check line decrement
E8B3	Check line increment
E8CB	Set colour code
E8DA	Colour code table
E8EA	Scroll screen
E965	Open space on screen
E9C8	Move a screen line
E9E0	Synchronize colour transfer
E9F0	Set start-of-line
E9FF	Clear screen line
EA13	Print to screen
EA24	Synchronize colour pointer
EA31	Interrupt - clock etc
EA87	Read keyboard
EB79	Keyboard select vectors
EB81	Keyboard 1 - unshifted
EBC2	Keyboard 2 - shifted
EC03	Keyboard 3 - 'comm'
EC44	Graphics/text contrl
EC4F	Set graphics/text mode
EC78	Keyboard 4
ECB9	Video chip setup
ECE7	Shift/run equivalent
ECF0	Screen ln address low
ED09	Send 'talk'
ED0C	Send 'listen'
ED40	Send to serial bus
EDB2	Serial timeout
EDB9	Send listen SA
EDBE	Clear ATN
EDC7	Send talk SA
EDCC	Wait for clock
EDDD	Send serial deferred
EDEF	Send 'untalk'
EDFE	Send 'unlisten'
EE13	Receive from serial bus
EE85	Serial clock on
EE8E	Serial clock off
EE97	Serial output '1'
EEA0	Serial output '0'
EEA9	Get serial in & clock
EEB3	Delay 1 ms
EEBB	RS-232 send
EF06	Send new RS-232 byte
EF2E	No-DSR error
EF31	No-CTS error
EF3B	Disable timer
EF4A	Compute bit count
EF59	RS232 receive
EF7E	Setup to receive
EFC5	Receive parity error
EFCA	Receive overflow
EFCD	Receive break
EFD0	Framing error
EFE1	Submit to RS232
F00D	No-DSR error
F017	Send to RS232 buffer
F04D	Input from RS232
F086	Get from RS232
F0A4	Check serial bus idle
F0BD	Messages
F12B	Print if direct
F13E	Get..
F14E	..from RS232
F157	Input
F199	Get.. tape/serial/rs232
F1CA	Output..
F1DD	..to tape
F20E	Set input device
F250	Set output device
F291	Close file
F30F	Find file
F31F	Set file values
F32F	Abort all files
F333	Restore default I/O
F34A	Do file open
F3D5	Send SA
F409	Open RS232
F49E	LOAD program
F5AF	'searching'
F5C1	Print filename
F5D2	'loading/verifying'
F5DD	SAVE program
F68F	Print 'SAVING'
F69B	Bump clock
F6BC	Log PIA key reading
F6DD	Get time
F6E4	Set time
F6ED	Check stop key
F6FB	Output error messages
F72D	Find any tape headr
F76A	Write tape header
F7D0	Get buffer address
F7D7	Set buffer start/end pointers
F7EA	Find specific header
F80D	Bump tape pointer
F817	'press play..'
F82E	Check tape status
F838	'press record..'
F841	Initiate tape read
F864	Initiate tape write
F875	Common tape code
F8D0	Check tape stop
F8E2	Set read timing
F92C	Read tape bits
FA60	Store tape chars
FB8E	Reset pointer
FB97	New character setup
FBA6	Send transition to tape
FBC8	Write data to tape
FBCD	IRQ entry point
FC57	Write tape leader
FC93	Restore normal IRQ
FCB8	Set IRQ vector
FCCA	Kill tape motor
FCD1	Check r/w pointer
FCDB	Bump r/w pointer
FCE2	Power reset entry
FD02	Check 8-rom
FD10	8-ROM mask
FD15	Kernal reset
FD1A	Kernal move
FD30	Vectors
FD50	Initialize system constnts
FD9B	IRQ vectors
FDA3	Initialize I/O
FDDD	Enable timer
FDF9	Save filename data
FE00	Save file details
FE07	Get status
FE18	Flag status
FE1C	Set status
FE21	Set timeout
FE25	Read/set top of memory
FE27	Read top of memory
FE2D	Set top of memory
FE34	Read/set bottom of memory
FE43	NMI entry
FE66	Warm start
FEB6	Reset IRQ & exit
FEBC	Interrupt exit
FEC2	RS-232 timing table
FED6	NMI RS-232 in
FF07	NMI RS-232 out
FF43	Fake IRQ
FF48	IRQ entry
FF81	Jumbo jump table
FFFA	Hardware vectors

B Series Memory Map

Jim Butterfield, Toronto, Ont.

The following information applies to B systems released after April 1973, which contain a revised Machine Language Monitor. (If SYS 6 doesn't bring in a monitor display complete with a 'period' prompt, it's the wrong version).

Notable features as compared to previous Commodore products include:

- CHRGOT is no longer in RAM. "Wedge" type coding must be inserted at links $029E and $02A0 .. which is likely to make the job easier.
- BASIC vectors have "split" - now, for example, there are discrete "Start of Variables" and "End of Variables", distinct from End of BASIC and Start of Arrays. Three-byte vectors (including bank number) are not uncommon.
- The "Jump Table" at top of memory is still accessible and reasonbly consistent with previous Commodore products.
- Simple machine language programs will fit into the spare 1k of ROM at $0400-0800 without trouble. Large programs must be implemented either by plug-in memory (RAM or ROM) in bank 15, or placed into another bank (preferably bank 3); supplementary code will be needed to make all the coding components fit.

The following map contains BASIC addresses specific to the B256/80; references to banks 0 to 4 are also specific to that machine. Most of the map is of general usage, however.

All Banks

0000	0	6509 Execution Register
0001	1	6509 Indirection Register

Bank 0: Unused.

Bank 1:

0002 - F000	2-61439	BASIC Program (text) RAM
FA5E - FB00	61440-64512	Input buffer area

Bank 2:

0002 - FFFF	2-65535	BASIC Arrays in RAM.

Bank 3:

0002 - 7FFF	2-32767	Unused RAM
8000 - FFFF	32768-65535	BASIC Variables in RAM

Bank 4:

0002 - FBFF	2-64511	BASIC Strings (top down) in RAM
FC00 - FCFF	64512-64767	Unused RAM (descriptors")
FD00 - FFFF	64768-65535	Current KEY definitions.

Banks 5 to 14 Unused

Bank 15:

0002 - 0004	2-4	USR Jump
0005 - 0008	5-8	TI$ Output Elements: H,M,S,T
0009 - 000B	9-11	Pointer: Print Using Format
000C	12	Search Character
000D	13	Scan-between-Quotes Flag
000E	14	Input point, * subscripts
000F	15	Catalog line counter
0010	16	Default DIM flag
0011	17	Type: 255 = string, 0 = integer
0012	18	Type: 128 = integer, 0 = fl point
0013	19	Crunch flag
0014	20	Subscript index
0015	21	Input = 0; Get = 64; Read = 152
0016 - 0019	22-25	Disk status work values
001A	26	Current IO device fr prompt suppress
001B - 001C	27-28	Integer value
001D - 001F	29-31	Descriptor stack pointers
0020 - 002B	32-43	Misc work pointer
002D - 002E	45-46	**Pointer:** Start of BASIC
002F - 0030	47-48	**Pointer:** End of BASIC
0031 - 0032	49-50	**Pointer:** Start of Variables
0033 - 0034	51-52	**Pointer:** End of Variables
0035 - 0036	53-54	**Pointer:** Start of Arrays
0037 - 0038	55-56	**Pointer:** End of Arrays
0039 - 003A	57-58	**Pointer:** Variable work
003B - 003C	59-60	**Pointer:** Bottom of Strings
003D - 003E	61-62	**Pointer:** Utility String
003F - 0041	63-65	**Pointer:** Top of String Memory
0042 - 0043	66-67	Current BASIC line number
0044 - 0045	68-69	Old BASIC line number
0046 - 0047	70-71	Old BASIC text pointer
0049 - 004A	73-74	Data line number
004B - 004C	75-76	Data text pointer
004D - 004E	77-78	Input pointer
004F - 0050	79-80	Variable name
0051 - 0053	81-83	Variable address
0054 - 0056	84-86	For-loop pointer
0057 - 0058	87-88	Text pointer save
005A	90	Comparison symbol accumulator
005B - 005D	91-93	Function location
005E - 0060	94-96	Working string vector
0061 - 0063	97-99	Function jump code
0064 - 006E	100-110	Work pointers, values
006F	111	Exponent sign
0070	112	Accum string prefix
0071	113	Accum*1: Exponent
0072 - 0075	114-117	Accum*1: Mantissa
0076	118	Accum*1: Sign
0077	119	Series Evaluation Const pointer
0078	120	Accum*1 Hi order (overflow)
0079 - 007E	121-126	Accum*2, Ex, Man, Sign
007F	127	Sign comparison, Acc*1 vs *2
0080	128	Acc*1 Lo order (rounding)
0081 - 0084	129-132	Series, Work pointers
0085 - 0087	133-135	**Pointer:** BASIC text
0088 - 0089	136-137	Input pointer
008B - 008E	139-142	DOS parser work values
008F	143	Error type number
0090 - 0092	144-146	Pointer to file name
0093 - 0095	147-149	**Pointer:** Tape Buffer, Scrolling
0096 - 0098	150-152	Load end address/End of program
0099 - 009B	153-155	I/O start address
009C	156	Status word ST
009D	157	File name length
009E	158	Current logical file
009F	159	Current device
00A0	160	Current secondary address
00A1	161	Input device, normally 0
00A2	162	Output CMD device, normally 3
00A6 - 00A8	166-168	INBUF
00A9	169	Keyswitch PIA .. stop key etc.
00AA	170	IEEE deferred flag
00AB	171	IEEE deferred character
00AC - 00AD	172-173	Segment transfer rtn vector
00AE - 00B3	174-179	Monitor register save
00B4	180	Monitor stack pointer save
00B5	181	Monitor bank number save
00B7 - 00B8	183-184	Monitor IRQ save/pointer
00B9 - 00BA	185-186	Monitor memory pointer
00BB - 00BC	187-188	Monitor secondary pointer
00BD	189	Monitor counter
00BE	190	Monitor misc byte
00BF	191	Monitor device number
00C0 - 00C1	192-193	Prog Key Table address.
00C2 - 00C3	194-195	Programmable key address
00C4 - 00C7	196-199	Pointers to change Prog Key Table
00C8 - 00C9	200-201	Pointer to screen line
00CA	202	Screen line number
00CB	203	Posititon of cursor on line
00CC	204	0 = text mode, else graphics md
00CD	205	Key pressed: 255 if no key
00CE	206	Old cursor column
00CF	207	Old cursor row
00D0	208	New character flag
00D1	209	* keys in Keyboard buffer
00D2	210	Quotes Flag
00D3	211	Insert key counter
00D4	212	Cursor type flag
00D5	213	Screen line length
00D6	214	* keys in 'key' buffer
00D7	215	Key repeat delay
00D8	216	Key repeat speed
00D9 - 00DA	217-218	Temporary Variables
00DB	219	Current output character
00DC	220	Top line of current screen
00DD	221	Bottom line of screen
00DE	222	Left edge of current screen
00DF	223	Right edge of screen
00E0	224	Keys: 255 = none;127 = key,111 - shift
00E1	225	Key: 255 = none (no shift)
00E2 - 00E5	226-229	Line Wrap Bits
0100	256	Hex to binary staging area
0100 - 010A	256-266	Numeric to ASCII work area
0100 - 01FE	256-510	Stack area
01FF	511	Stack pointer save location
0200 - 020F	512-527	File name area
0210 - 0226	528-550	Disk command work area
0255 - 0256	597-598	Misc work values for WAIT, etc
0257	599	'Bank' value
0258	600	Output logical file (CMD)
0259	601	Sign of TAN
025A - 025D	602-605	Pickup subrtn; misc work values
025E - 0276	606-630	PRINT USING working variables
0280 - 0281	640-641	Error routine link (854D)
0282 - 0283	642-643	Warm start link (85C5)
0284 - 0285	644-645	Crunch token link (88A9)
0286 - 0287	646-647	List link (89DB)
0288 - 0289	648-649	Command dispatch link (874C)
028A - 028B	650-651	Token evaluate link (969C)
028C - 028D	652-653	Expression eval link (95AF)
028E - 028F	654-655	CHRGOT link (B98E)
0290 - 0291	656-657	CHRGET vector (B994)
0292 - 0293	658-659	Float-fixed vector (B980)
0294 - 0295	660-661	Fixed-Float vector (9CA5)
0296 - 0297	662-663	Error trap vector
0298 - 0299	664-665	Error line number
029A - 029B	666-667	Error exit pointer
029C	668	Stack pointer save
029D - 029F	669-671	Temporary TRAP, DISPOSE bytes
02A0 - 02A5	672-677	Temporary INSTR$ bytes
02A6 - 02A7	678-679	Bank offset
0300 - 0301	768-769	IRQ vector (FBE9)
0302 - 0303	770-771	BRK vector (EE21)
0304 - 0305	772-773	NMI vector (FCAA)
0306 - 0307	774-775	OPEN vector (F6BF)
0308 - 0309	776-777	CLOSE vector (F5ED)
030A - 030B	778-779	Connect-input vector (F549)
030C - 030D	780-781	Connect-output vector (F5A3)
030E - 030F	782-783	Restore deflt I/O vector (F6A6)
0310 - 0311	784-785	Input vector (F49C)
0312 - 0313	786-787	Output vector (F4EE)
0314 - 0315	788-789	Stop key test vector (F96B)
0316 - 0317	790-791	GET vector (F43D)
0318 - 0319	792-793	Abort all files vector (F67F)
031A - 031B	794-795	Load vector (F746)
031C - 031D	796-797	Save vector (F84C)
031E - 031F	798-799	Monitor command vector (EE77)
0320 - 0321	800-801	Keyboard control vector (E01F)
0322 - 0323	802-803	Print control vector (E01F)
0324 - 0325	804-805	IEEE send LSA vector (F274)
0326 - 0327	806-807	IEEE send TSA vector (F280)
0328 - 0329	808-809	IEEE receive byte vector (F30A)
032A - 032B	810-811	IEEE send char vector (F297)
032C - 032D	812-813	IEEE send untalk vector (F2AB)
032E - 032F	814-815	IEEE send unlisten vector (F2AF)
0330 - 0331	816-817	IEEE send listen vector (F234)
0332 - 0333	818-819	IEEE send talk vector (F230)
0334 - 033D	820-829	File logical addresses table
033E - 0347	830-839	File device table
0348 - 0351	840-849	File secondary adds table
0352 - 0354	850-852	Bottom of system memory
0355 - 0357	853-855	Top of system memory
0358 - 035A	856-858	Bottom of user memory
035B - 035D	859-861	Top of user memory
035E	862	IEEE timeout: 0 = enabled
035F	863	0 = Load; 128 = Verify
0360	864	Number of open files
0361	865	Message mode byte
0363 - 0366	867-870	Misc register save bytes
0369	873	Timer toggle
036A - 036B	874-875	Cassette vector (dead end)
036F - 0371	879-881	Relocation start address
0375	885	Cassette motor flag (unused)
0376 - 0377	886-887	RS-232 Control, Command
037A	890	RS-232 Status
037B	891	RS-232 Handshake input
037C	892	RS-232 Input pointer
037D	893	RS-232 Arrival pointer
0380 - 0381	896-897	**Pointer:** Top of Memory
0382	898	Bank byte
0383	899	RVS flag
0384	900	Current line length
0385	901	Temp output char save
0386	902	0 = normal, 255 = auto insert
0387	903	0 = scrolling, 255 = no scroll
0388	904	Misc work byte for screen
0389	905	Index to prog key
038A	906	Scroll mode flag
038B	907	Bell mode flag
038C	908	Indirect bank save
038D - 03A0	909-928	Lengths of 'key' words
03A1 - 03AA	929-938	Bit mapped Tab stops
03AB - 03B4	939-948	Keyboard input buffer
03B5 - 03B6	949-950	'Key' word link (E91B)
03F8 - 03F9	1016-1017	Restart vector
03FA - 03FB	1018-1019	Restart test mask
0400 - 07FF	1024-2047	Free RAM (reserved for DOS)
0800 - 0FFF	2048-4095	Reserved for plug in RAM
1000 - 1FFF	4096-8191	Reserved for plug in DOS ROM
2000 - 7FFF	8192-23767	Reserved for cartridges
8000 - BFFF	32768-49151	BASIC ROM
C000 - CFFF	49152-53247	Unused
D000 - D7CF	53248-55247	Screen RAM
D800 - D801	55296-55297	Video controller 6545
DA00 - DA1C	55808-55836	Sound Interface Device 6581
DB00 - DB0F	56064-56079	Complex Interface Adaptor 6526
DC00 - DC0F	56320-56335	Complex Interface Adaptor 6526
DD00 - DD03	56576-56579	Asynchronous Comms IA 6551
DE00 - DE07	56832-56839	Tri Port Interface Adaptor 6525
DF00 - DF07	57088-57095	Tri Port Interface Adaptor 6525
E000 - FFFF	57344-65535	Kernal ROM

6525 Tri Port

DE00	NRFD	NDAC	EOI	DAV	ATN	RFN			56832
DE01	Sense	Cassette Motor	Out	ARB	Network Rx	Tx	SRQ	IFC	56833
DE02									56834
DE03	Data Direction Register For DE00								56835
DE04	Data Direction Register For DE01								56836
DE05	IRQ:			ACIA	IP	ALM	IEEE	PWR	56837
DE06	CB		CA: Graphics				IRQ Stack On		56838
DE07	Active Interrupt Register								56839

6525 Tri Port 2

DF00	Keyboard		57088
DF01	Select		57089
DF02	CRT Mode	Keyboard Read	57090
DF03	Data Direction Register for DF00 (out)		57091
DF04	Data Direction Register for DF01 (out)		57092
DF05	Data Direction Register for DF02 (in)		57093
DF06	Unused		57094

Commodore B128 ROM Routines

The following is a map of routines and data within the current (September 1983) version of the Commodore B128 computer. Caution: The same routines exists in the B256 but the addresses are not exactly the same.

8000	Jumps: Warm start, Cold start	8E24	Perform [DISPOSE]
8006	Mask: 'CBM8'	8E7A	Perform [PRINT#]
800B	Reference Vectors (unused)	8E80	Perform [CMD]
8027	Action vectors	8E9D	Perform [PRINT]
803B	Action (run etc) vectors	8F15	Perform [GET]
80A3	Function vectors	8F4B	Perform [INPUT#]
80D1	Operation vectors	8F66	Perform [INPUT]
80EF	Keywords	8FA8	Prompt & input
828F	Message vectors	8FEA	Perform [READ]
82E7	Messages	90E7	Perform [SYS]
8550	Print 'Out of memory'	910C	Perform [DIM]
8552	Error routine	9116	Perform [DEF]
85AE	Print line number	9146	Perform [POKE]
85C0	Warm start	9152	Perform [WAIT]
85F3	Handle new line	917F	Perform [KEY]
86A4	Rechain lines	91BC	Perform [VERIFY]
86A3	Receive input line	91C8	Perform [LOAD]
871F	Find BASIC line	921B	Perform [SAVE]
8751	Command dispatcher	9243	Perform [OPEN]
87DB	Peek stack for FOR/GOSUB	9297	Perform [CLOSE]
8815	Open text space	92A1	Perform [CATALOG]
8866	Stack too deep?	936D	Perform [DOPEN]
8889	Check string space	937E	Perform [APPEND]
8890	Check BASIC space	93A9	Perform [DCLOSE]
889F	Check array space	93C3	Perform [DSAVE]
88AB	'out of array space'	93CE	Perform [DLOAD]
88BF	Crunch tokens	93DE	Perform [BANK]
898D	Perform [LIST]	93EC	Perform [BSAVE]
8A29	Perform [NEW]	940E	Perform [BLOAD]
8A45	Perform [CLR]	9427	Perform [HEADER]
8A90	'USING' characters	9464	Perform [SCRATCH]
8A94	Perform [FOR]	949E	Perform [RECORD]
8B06	Perform [NEXT]	950A	Perform [DCLEAR]
8B79	Perform [RESTORE]	9513	Perform [COLLECT]
8BA8	Perform [STOP]	952A	Perform [COPY]
8BAA	Perform [END]	9546	Perform [CONCAT]
8BE9	Perform [CONT]	9552	Perform [RENAME]
8C07	Perform [RUN]	9560	Perform [BACKUP]
8C25	Perform [GOSUB]	9586	Patch area
8C42	Perform [IF]	95C1	Evaluate expression
8C77	Perform [REM/ELSE]	95CF	Recursive entry
8C7C	Perform [GO]	96CB	Value of PI in binary
8C84	Perform [GOTO]	96F8	Evaluate [NOT]
8CB8	Perform [RETURN]	9724	Eval within parens
8CDF	Perform [DATA]	979A	Go for disk status
8CED	Next statement	986B	Evaluate [OR]
8CF0	Next line	986E	Evaluate [AND]
8D16	Perform [TRAP]	98A8	Evaluate [COMPARE]
8D2B	Perform [ON]	992C	Get var name/loc
8D4E	Get fixed point number	99BF	Check alphabetic
8D8A	Perform [LET]	9AF5	Array pntr subrtn
8DC4	Perform [RESUME]	9B06	Float-fixed
9BA4	'bad subscript'	BA1E	Float-fixed conversion
9BA7	'illegal quantity'	BA26	CHRGET - Get new BASIC character
9CF5	Evaluate [FRE]	BA29	CHRGOT - Get previous character
9D33	Evaluate [POS]	BA50	Numeric check
9D39	Fixed-float	BA5A	Set text bank
9D4A	Confirm not direct	BA69	Set bank from FAC
9D57	Check direct mode	BA6E	Set bank from $60
9E07	Evaluate [PEEK]	BA73	Set bank from $24
9E30	Evaluate [subtract]	BA78	Set bank 15 (system)
9E4D	Evaluate [add]	BA7D	Set bank 4
9F5E	Overflow error	BA82	Set bank 2
9FCA	Evaluate [LOG]	BA87	Set bank 3
A00B	Evaluate [multiply]	BA8C	Set bank 1 (text)
A0D0	+10 floating	BB82	Startup message
A0E9	Evaluate [divide]	BBA6	Link vectors ($0280)
A148	Error: 'division by zero'	BBE1	BASIC I/O with error traps:
A210	Evaluate [SGN]	BBE2	Perform BASIC Open
A22F	Evaluate [ABS]	BBE8	Perform BASIC Get
A2B1	Evaluate [INT]	BBEE	Perform BASIC Input
A3B4	Print numeric	BBF4	Perform BASIC output
A3C3	Print canned message	BBFA	Perform BASIC connect-input
A50D	+32768	BC00	Perform BASIC connect-output
A537	Evaluate [SQR]	BC06	Perform BASIC Load
A541	Evaluate [power]	BC0C	Perform BASIC Save
A57A	Evaluate [negate]	BC12	Error on above BASIC I/O
A5B3	Evaluate [EXP]	BC1A	Output error message
A659	Evaluate [RND]	E000	**Kernal:**
A6A6	Evaluate [COS]	E24D	Set graphics mode
A6AD	Evaluate [SIN]	E251	Set text mode
A6F8	Evaluate [TAN]	E260	Set up CRT controlr
A791	Evaluate [ATN]	E299	Output to screen
A7C0	Perform [PUDEF]	E306	Control key fanout
A7DB	Evaluate [STR$]	E311	Escape key vector
A805	Set up string descriptors	E314	Cursor up/down
A81F	Scan and set up string	E331	Cursor left/right
A8AB	Build string into memory	E344	Rvs/rvs off
A8E6	Discard unwanted string	E34A	Home/clear
A955	..clean descriptor stack	E35A	Tab & tab set/clear
AAD1	Evaluate [CHR$]	E394	Carriage return
AAEB	Evaluate [LEFT$]	E3B4	Move screen line
AB22	Evaluate [RIGHT$]	E48D	Ring bell
AB42	Evaluate [MID$]	E4BA	Delete numeric
AB8E	Evaluate [LEN]	E4F5	Check start of line
AB9D	Evaluate [ASC]	E51E	Locate line wrap
ABAE	Evaluate [VAL]	E532	Goto start of line
AD53	Allocate dynamic string space	E544	Goto end of line
ADB5	Garbage collection	E5AE	Delete/insert
AF9D	Perform [DELETE]	E61C	Initiate load/run
AFF4	Get line range	E655	Escape key link
B026	Perform <PRINT USING>	E658	Insert a line
B4B8	Reset text pointer	E66D	Delete a line
B4E5	Evaluate integer	E694	Erase right
B501	Evaluate numeric	E6A9	Erase left
B504	Check numeric mode	E6BD	Scroll up
B506	Check string mode	E6BF	Scroll down
B52E	Print format character	E6E3	Enable scrolling
B53A	Print character	E6E5	Disable scrolling
B7CB	Disk command formats	E7BE	Create new prog key
E949	Get prog key addrs	F1C3	Error messages
E970	Escape sequence	F221	Print error message
E979	Cancel escape seq	F230	Send 'talk'
E985	Escape key vectors	F234	Send 'listen'
E9B9	Set top/left	F236	Send IEEE command
E9BB	Set bottom/right	F274	Send Listen SA
E9BC	Set window	F277	Release ATN
E9C7	Set full screen	F280	Send Talk SA
E9D6	Enable bell	F283	Prepare IEEE in
E9D8	Disable bell	F297	Send IEEE deferred
E9DC	Set underline mode	F2AB	Send 'untalk'
E9E6	Set flashing cursor	F2AF	Send 'unlisten'
E9EC	Set solid cursor	F2B9	Send IEEE byte
E9EF	Set non-flashing cursor	F30A	Receive IEEE byte
E9F6	Reverse screen	F381	Open RS-232
E9F9	(alternate characters)	F3C7	Convert to true ASCII
EA05	Un-reverse screen	F3DC	Convert to PETSCII
EA08	(normal characters)	F400	Allocate buffer
EA20	Cancel auto insert	F4EE	Output
EA23	Set auto insert	F549	Connect input
EBA9	Load/run keys	F5A3	Connect output
EBB3	Screen line adds low	F5ED	Close file
EBCB	Screen line adds high	F63E	Find file LA
EBE4	Control key vectors	F650	Set file details
EC24	Default 'key' word lengths	F660	Find matching SA
EC2E	Default 'key' words	F678	Search for file
EC67	Bit masks	F67F	Abort all files
EC6F	CRT controller setup	F6A6	Restore default I/O
EE00	Monitor trap	F6BF	Open file
EE09	Monitor call (60937)	F707	Open IEEE
EE21	BRK entry	F746	Load
EE55	Monitor reentry	F84C	Save
EED5	Monitor vectors	F8E6	Read time of day
EEF9	Perform [.X] exit to BASIC	F90E	Set TOD/alarm
EEFF	Set PC address	F939	File error entry points
EF08	Set register address	F997	Power up reset
EF17	Print prompt group	FAFD	Vectors
EF1F	Print space	FB31	NMI entry
EF22	Print question mark	FB34	Set function addrs
EF27	Monitor prompt	FB43	Set file parameters
EF31	Register heading	FB4A	Read status byte
EF4C	Perform [.R] register display	FB5A	Set message mode
EF8F	Perform [.M] memory display	FB5F	Log into status byte
EFCB	Perform [.;] register change	FB74	Set timeout
EFE1	Perform [.V] bank switch	FB78	Set/read top of memory
FFEB	Perform [.U]	FB8D	Set/read bottom of memory
EFF5	Perform [.:] memory change	FBA2	Set page 3 vectors
F010	Perform [.G] go	FBD6	IRQ interrupt
F04A	Perform [.L/.S] load/save	FBE9	Interrupt routines
F0F6	Print 2 hex bytes	FC9F	Wind up interrupt
F0FB	Print hex byte	FE9D	Exsub - Bank Transfer Sequences:
F107	Print hex digit	FF04	..excomm
F113	Swap temp1/temp2	FF19	..ipinit
F123	Get 4 hex digits	FF24	..putaxs
F130	Get hex byte	FF2A	..putas
F154	ASCII hex to binary	FF6C	Jumbo jump table
F15F	Input character	FFF6	Bank transfer execution
F165	Perform [.@] disk status	FFFA	Hard vectors

10	Cursor Start	96 (blink) or 0 or 6 (underline)
11	Cursor End	13 or 7
12	Display Address H	0
13	Display Address L	0
14	Cursor Address H	Varies
15	Cursor Address L	Varies
16	Light Pen In H	0
17	Light Pen In L	0

Most Register are Write Only 14/15 are Read/Write
16/17 are Read Only
Registers 10, 14 and 15 change as the cursor moves

6581 SID

DA01	Voice 1 Frequency High							55809
DA04				Saw Tooth		Ring Mod	Key	55812
DA05	Attack				Decay			55813
DA06	Sustain				Release			55814
DA0F	Voice 3 Modulating Freq Hi							55823
DA18					Volume			55832

VIC 20 Super Expander (1211A) Memory Map

General Input/Output Routines

A000 – A001	**Vector:** RESET ($A044)
A002 – A003	**Vector:** NMI ($A077)
A004 – A008	ROM identification ('a0CBM')
A009 – A010	**Table:** function key numbers
A011 – A043	**Table:** initial function key definitions
A044 – A076	RESET routine
A077 – A08A	NMI routine
A08B – A0BE	Parse KEY (get parameters and check syntax)
A0BF – A131	Display all function key definitions
A110 – A11C	Print '" + chr$(34)' and an optional '+'
A11D – A131	Print '" + chr$(13)' and an optional '+'
A132 – A135	**Table:** ASCII string for output ('key ' backwards)
A136 – A13F	**Table:** ASCII string for output ('" + chr$(13)' backwards)
A140 – A149	**Table:** ASCII string for output ('" + chr$(34)' backwards)
A14A – A17A	Delete current function key string (key number in .X)
A17B – A1B0	Insert string into function key definition area
A1B1 – A1BE	Locate function key definition (key # in .X, return index in .Y)
A1BF – A213	**Table:** new BASIC keywords in ASCII form
A214 – A237	**Table:** vectors corresponding to new BASIC tokens ($CC to $DD)
A238 – A2A1	Initialize kernal vectors, I/O, RAM
A2A2 – A2C1	**Table:** kernal vectors (L,H)
A2C2 – A2C7	Warm start routine
A2C8 – A317	Output a character to device 3 (char in .A)
A318 – A336	End music mode
A337 – A365	Interpret keyboard matrix input
A366 – A369	**Table:** keyboard matrix code for function keys
A36A – A371	**Table:** conversion pattern for function keys
A372 – A394	IRQ routine
A395 – A3A5	Input a char from any device (device number in $99)
A3A6 – A3B3	Output a char to any device (char in .A, device num in $9A)
A3B4 – A3F1	Input each char from keyboard buffer
A3B4 – A3E7	Handle 'RUN' key
A3E8 – A3F1	Handle 'RETURN' key
A3F2 – A3FC	Input from device 0
A3FD – A406	Print an error message in GRAPHIC 0 mode (error token in .A)
A407 – A4B9	Lexically analyse BASIC source line (translate to tokens)
A4BA – A503	Print BASIC tokens in ASCII form
A504 – A529	Start new BASIC statement
A515 – A523	Handle new tokens ($CC to $D6)
A52A – A58A	Get and evaluate an expression
A558 – A58A	Handle new function tokens ($D7 to $DD)
A58B – A596	**Table:** BASIC vectors for RAM
A597 – A5A4	Change BASIC vectors during RESET

Music Routines

A5A5 – A5D0	Save current sound table (address of table in .X,.Y)
A5D1 – A601	IRQ music driver
A602 – A625	**Table:** conversion for note index to frequency
A626 – A6E5	Interpret music mode characters (char in .A)
A629 – A643	Execute 'O' command, default 3
A644 – A65D	Execute 'T' command, default 0
A65E – A674	Execute 'S' command, default 4
A675 – A686	Execute 'V' command, default 7
A687 – A693	Execute 'R' command
A694 – A69B	Execute 'P' command
A69C – A6A7	Execute 'Q' command
A6A8 –	Play new note (note index in .Y)
A6AB – A6B3	Save new sound table when previous note finishes
A6B4 – A6B9	Common return routine
A6BA – A6CD	Play notes 'A' to 'G'
A6CE – A6DA	Execute '#' command
A6DB – A6E5	Execute '$' command
A6E6 – A6EC	**Table:** conversion for notes to note index
A6ED – A6EF	**Table:** conversion for octave to base note index
A6F0 – A6F9	**Table:** conversion for tempo to duration (jiffies)

Parsing New Command Routines

A6FA –	Look for and evaluate first 1-byte and two 2-byte parameters
A6FD –	Look for and evaluate two 2-byte parameters
A700 –	Look for and evaluate one 2-byte parameter
A714 – A71B	Save one 1-byte parameter (parameter in .A, index in .Y)
A71C –	Look for and evaluate two 1-byte parameters
A71F – A72B	Look for and evaluate one 1-byte parameter
A72C – A73F	Parse GRAPHIC (get parameters and check syntax)
A740 – A762	Parse CIRCLE
A763 – A7A4	Parse DRAW
A7A5 – A7BC	Parse POINT
A7BD –	Parse COLOR
A7C8 – A7CE	Go to execute commands after parsing
A7CF – A7D8	Parse REGION
A7D9 – A7DC	Parse SCNCLR
A7DD – A7E9	Parse SOUND
A7EA – A809	Parse CHAR
A80A – A810	Parse PAINT
A811 – A817	Parse RPOT
A818 – A81B	Parse RPEN
A81C – A81F	Parse RSND
A820 – A823	Parse RCOL
A824 – A827	Parse RGR
A828 – A842	Parse RDOT
A843 – A846	Parse RJOY
A847 – A84E	Look for first 1-byte parameter
A84F – A866	Indirect jump to execute new commands (pointer to parameter save area in .X,.Y, command index in .A)
A867 – A878	**Table:** vector to execute new commands (H)
A879 – A88A	**Table:** vector to execute new commands (L)
A88B – AA22	Execute GRAPHIC
A8AB – A94E	Handle GRAPHIC 1,2,3 if previous was 0
A8D4 – A942	Transfer BASIC program to above $2000 and execute CLR
A943 – A94E	Make screen at $1E00 and character set at $1000
A94F – A9A8	Handle GRAPHIC 4
A967 – A9AB	Transfer BASIC program down to old location and execute CLR
A9AC – A9B7	Handle GRAPHIC 0 if previous was 1,2,3
A9B8 – AA22	Set up proper GRAPHIC screen
AA23 – AA28	Execute RGR
AA29 – AA6A	Execute COLOR
AA68 – AA84	Execute REGION
AA85 – AA8B	Execute RCOL
AA8C – AAE6	Execute RDOT
AAE7 – AAF1	Execute POINT
AAF2 – AB12	Execute SCNCLR
AB13 – AB22	Execute DRAW (C TO X,Y ...)
AB23 – AB34	Execute DRAW (C,X,Y TO X,Y ...)
AB35 – AB54	Execute SOUND
AB55 – AB69	Execute RSND
AB6A – AB76	Execute RPOT
AB77 – AB7D	Execute RPEN
AB7E –	Plot a single point from parameter save area
AB86 – ABE4	Plot a single point from beginning scaled X,Y coordinates
ABE5 –	Set up pointers to char and colour memory
ABFA – AC0A	Set up pointer to colour memory
AC0B –	Draw a line with a new starting coordinate
AC11 – AC92	Draw a line starting from previous coordinate (using a version of Bresenham's DDA algorithm)
AC93 – AD12	Execute CIRCLE using principal of digital differential analyser (DDA)
AD13 –	Convert starting angle to radians
AD19 – AD22	Divide FAC#1 by 16
AD23 –	Calculate new scaled X and Y coordinate on locus
AD39 – AD6B	Calculate unit offset times scaled radius
AD6C – ADDE	Execute PAINT
ADDF –	Check for possible new lower bound pivot coordinate
ADE8 – AE01	Save pivot coordinate
AE02 – AE0B	Check for possible new upper bound pivot coordinate
AE0C –	Check if able to PAINT a coordinate
AE0F – AE1E	Check if able to PAINT a coordinate (X,Y in .A,.Y)
AE1F – AE23	Move beginning scaled X,Y coordinate to .A,.Y
AE24 – AE3B	Check if coordinate has been already plotted on
AE3C – AE44	Move beginning scaled X coordinate to the right
AE45 – AE51	Move beginning scaled X coordinate 2 to the left
AE52 – AE56	Flag 'FORMULA TOO COMPLEX' error message
AE57 – AED9	Execute CHAR
AEDA – AF13	Execute RJOY
AF14 – AF33	Set up correct VIC chip screen registers
AF34 –	Save number of coordinates and colour register
AF39 – AF3E	Save colour register
AF3F – AF47	Copy beginning from ending scaled X,Y coordinate
AF48 – AF75	Scale X and Y coordinates
AF76 – AFB0	Scale X and Y coordinates to the range 0 to 159 (.X = .A*coordinate*2/256) (number of columns or rows in .A)

AFB1	– AFBA	**Table:** vector to map Y coordinate to colour memory (L)
AFBB	– AFCE	**Table:** vector to map X coordinate to character memory (L)
AFCF	– AFE2	**Table:** vector to map X coordinate to character memory (H)
AFE3	– AFE5	**Table:** bit set for colour memory
AFE6	– AFE6	(not used – contains $00)
AFE7	– AFEE	**Table:** bit mask for highres mode
AFEF	– AFF6	**Table:** bit mask for multicolour mode
AFF7	– AFFA	**Table:** bytes to plot in multicolour mode
AFFB	– AFFE	**Table:** conversion factor for VIC chip screen registers
AFFF	– AFFF	(not used – contains $AA)

General RAM Area

0024		Number of coordinates
0024		**Flag:** colour register mode ($FF = multicolour, $00 = highres)
0024	– 0025	**Pointer:** new start of variables / start of BASIC memory
0026		Temp area for building VIC chip registers / for building character byte / for saving start of BASIC (L)

Current Coordinates

0062		Ending scaled X coordinate (0 to 159)
0063		Beginning scaled X coordinate (0 to 159)
0064		Scaled X difference (absolute value)
0065		Ending scale Y coordinate (0 to 159)
0066		Beginning scaled Y coordinate (0 to 159)
0067		Scaled Y difference (absolute value–1)

For Scaling Coordinates

0069		Multiplicand–1
006A		16–bit product
006B	– 006C	10–bit multiplier

For DRAW

0067		Scaled X unit direction–1
006A		Scaled Y unit direction
006B	– 006C	Number of scaled Y units left to plot before next scaled X unit (count up)
006D	– 006E	Number of points left to plot (count up)

For PAINT

0069		**Index:** pivot coordinates save area

For CHAR

0069		Current row (0 to 19)
006A		Current column (0 to 19)
006B		Length of string
006C	– 006D	**Pointer:** string location

General RAM Area

009B		**Index:** beginning of current function key definition
009B	– 009C	**Pointer:** current char set address / byte in char set / position in screen memory / destination of byte of BASIC program to transfer
009D		**Index:** end of function key definition area
009E		Current function key number / length of current function key string
009F		Length of current function key string (count down)
009E	– 009F	**Pointer:** byte in colour memory
00AC	– 00AD	**Pointer:** current byte (function key definition, tape, scrolling)
00C3		**Flag:** 0 = have transferred BASIC program to a new location
00C3	– 00C4	**Pointer:** kernal set up / current music table / parameter save area ($003C)
00FB	– 00FC	**Pointer:** top of BASIC memory (usually same as $0284–$0285)

For KEY

028F	– 0290	**Vector:** interpret keyboard input ($A337)
02A1		Number of bytes taken by Super Expander in high memory ($88)
02A2		Number of characters in function key definition
02A3		**Index:** current byte of function key string
02A4		Length of function key string (amount left to output)

For Music

02A5		Previous character in music mode
02A6		Music mode ($80 = on)
02A7		Screen echo ($50 = on, $00 = off)
02A8		Current voice (sound register–1)
02A9		Current note index
02AA		Current duration (jiffies)
02AB		Current sound amplitude (volume * 2)
02AC		Current octave (base note index)
02AD		Voice 1 note index (+ $80)
02AE		Voice 1 duration count down (jiffies)
02AF		Voice 2 note index (+ $80)
02B0		Voice 2 duration count down (jiffies)
02B1		Voice 3 note index (+ $80)
02B2		Voice 3 duration count down (jiffies)
02B3		Voice 4 note index (+ $80)
02B4		Voice 4 duration count down (jiffies)
02B5	– 02BF	(for expansion)

For Execution Of New Commands

02C0	– 02C2	**Jump table:** execute new commands (JMP $A84F)
02C3		Current VIC chip left margin register
02C4		Current VIC chip top margin register
02C5		Current VIC chip number of columns register
02C6		Current VIC chip number of rows register
02C7		Current row of cursor
02C8		Current GRAPHIC mode
02C9		(for expansion)
02CA		Current colour register parameter (while plotting)
02CB		Current screen colour
02CC		Current border colour
02CD		Current character colour
02CE		Current auxiliary colour
02CF		**Index:** parameter save area (while plotting)
02D0		Current character set address page
02D1		Usual character set address page ($80)
02D2	– 02D3	**Pointer:** old limit of BASIC memory
02D4		Old screen memory page
02D5		Last scaled X coordinate (0 to 159)
02D6		Last scaled Y coordinate (0 to 159)
02D7		**Flag:** $00 = DRAW C,X,Y TO, $01 = DRAW C TO / current number of out of range coordinates ($00 = within range)
02D8		Old number of out of range coordinates ($00 = within range)
02D9		**Index:** parameter save area (while getting parameters)
02DA	– 02FF	(for expansion)

Operating System Vectors

0300	– 0301	**Vector:** error message	($A3FD)
0302	– 0303	**Vector:** BASIC warm start	($C483)
0304	– 0305	**Vector:** lexically analyse BASIC source line	($A407)
0306	– 0307	**Vector:** print BASIC tokens in ASCII form	($A4BA)
0308	– 0309	**Vector:** start new BASIC statement	($A504)
030A	– 030B	**Vector:** get and evaluate an expression	($A52A)
0314	– 0315	**Vector:** IRQ	($A372)
0316	– 0317	**Vector:** BRK instruction	($A2C2)
0318	– 0319	**Vector:** NMI	($FEAD)
031A	– 031B	**Vector:** BASIC OPEN statement	($F40A)
031C	– 031D	**Vector:** BASIC CLOSE statement	($F34A)
031E	– 031F	**Vector:** set input	($F2C7)
0320	– 0321	**Vector:** set output	($F309)
0322	– 0323	**Vector:** restore I/O	($F3F3)
0324	– 0325	**Vector:** input a character	($A395)
0326	– 0327	**Vector:** output a character	($A3A6)
0328	– 0329	**Vector:** test 'STOP' key	($F770)
032A	– 032B	**Vector:** BASIC GET statement	($F1F5)
032C	– 032D	**Vector:** abort I/O	($F3EF)
032E	– 032F	**Vector:** user BRK instruction	($A2C2)
0330	– 0331	**Vector:** BASIC LOAD statement	($F549)
0332	– 0333	**Vector:** BASIC SAVE statement	($F685)
0334	– 033B	(for expansion)	

Save Area

033C	– 03F8	Save area: parameter passing / pivot coordinates (PAINT)

For CIRCLE

033C		**Index:** X or Y
0347	– 0348	Old scaled X coordinate on locus
0349	– 034A	Old scaled Y coordinate on locus
034B	– 034C	New scaled X coordinate on locus
034D	– 034E	New scaled Y coordinate on locus
034F	– 0353	Floating point unit offset X coordinate
0355	– 0359	Floating point unit offset Y coordinate

Instruction Set Summary

Instr	Addressing Mode	Assembler Format	Operation	Op Code Hex	Op Code Dec	Bytes	Clock Cycles	Status Register - P N V D I Z C	Instr
ADC	Immediate	ADC #oper	.A + # + C → .A, C	69	105	2	2		**ADC**
	Zero Page	ADC addr	.A + [addr] + C → .A, C	65	101	2	3	✓ ✓ – – ✓ ✓	
	Zero Page, X	ADC addr, X	.A + [addr + .X] + C → .A, C	75	117	2	4		
	Absolute	ADC ADDR	.A + [ADDR] + C → .A, C	6D	109	3	4		
	Absolute, X	ADC ADDR, X	.A + [ADDR + .X] + C → .A, C	7D	125	3	4*		
	Absolute, Y	ADC ADDR, Y	.A + [ADDR + .Y] + C → .A, C	79	121	3	4*		
	(Indirect, X)	ADC (addr, X)	.A + [[addr + .X + 1, addr + .X]] + C → .A, C	61	97	2	6		
	(Indirect),Y	ADC (addr),Y	.A + [[addr + 1, addr] + .Y] + C → .A, C	71	113	2	5*		
AND	Immediate	AND #oper	.A ∩ # → .A	29	41	2	2		**AND**
	Zero Page	AND addr	.A ∩ [addr] → .A	25	37	2	3	✓ – – – ✓ –

MCS65XX Microprocessor Instruction Set Alphabetic Sequence

ADC	Add memory to accumulator with carry.
AND	AND memory with accumulator.
ASL	Shift left one bit (memory or accumulator).
BCC	Branch on carry clear.
BCS	Branch on carry set.
BEQ	Branch on result zero.
BIT	Test bits in memory with accumulator.
BMI	Branch on result minus.
BNE	Branch on result not zero.
BPL	Branch on result plus.
BRK	Force break.
BVC	Branch on overflow clear.
BVS	Branch on overflow set.
CLC	Clear carry flag.
CLD	Clear decimal mode.
CLI	Clear interrupt disable bit.
CLV	Clear overflow flag.
CMP	Compare memory and accumulator.
CPX	Compare memory and index 'X'.
CPY	Compare memory and index 'Y'.
DEC	Decrement memory by one.
DEX	Decrement index 'X' by one.
DEY	Decrement index 'Y' by one.
EOR	Exclusive-OR memory with accumulator.
INC	Increment memory by one.
INX	Increment index 'X' by one.
INY	Increment index 'Y' by one.
JMP	Jump to new location.
JSR	Jump to new location saving return address.
LDA	Load acculmulator with memory.
LDX	Load index 'X' with memory.
LDY	Load index 'Y' with memory.
LSR	Shift right one bit (memory or accumulator).
NOP	No operation.
ORA	OR memory with accumulator.
PHA	Push accumulator on stack.
PHP	Push processor status on stack.
PLA	Pull accumulator from stack.
PLP	Pull processor status from stack.
ROL	Rotate one bit left (memory or accumulator).
ROR	Rotate one bit right (memory or accumulator).
RTI	Return from interrupt.
RTS	Return from subroutine.
SBC	Subtract memory from accumulator with borrow.
SEC	Set carry flag.
SED	Set decimal mode.
SEI	Set interrupt disable status.
STA	Store accumulator in memory.
STX	Store index 'X' in memory.
STY	Store index 'Y' in memory.
TAX	Transfer accumulator to index 'X'.
TAY	Transfer accumulator to index 'Y'.
TSX	Transfer stack pointer to index 'X'.
TXA	Transfer index 'X' to accumulator.
TXS	Transfer index 'X' to stack pointer.
TYA	Transfer index 'Y' to accumulator.

Addressing Modes

Accumulator Addressing - This form of addressing is represented with a one byte instruction, implying an operation on the accumulator.

Immediate Addressing - In immediate addressing, the operand is contained in the second byte of the instruction, with no further memory addressing required.

Absolute Addressing - In absolute addressing, the second byte of the instruction specifies the eight low order bits of the effective address while the third byte specifies the eight high order bits. Thus, the absolute addressing mode allows access to the entire 65k bytes of addressable memory.

Zero Page Addressing - The zero page instructions allow for shorter code and execution times by only fetching the second byte of the instructions and assuming a zero high address byte. Careful use of the zero page can result in significant increase in code efficiency.

Indexed Zero Page Addressing - (X, Y Indexing) - This form of addressing is used in conjunction with the index register and is referred to as "Zero Page, X" or "Zero Page, Y". The effective address is calculated by adding the second byte to the contents of the index register. Since this is a form of "Zero Page" addressing, the content of the second byte references a location in page zero. Additionally due to the "Zero Page" addressing nature of this mode, no carry is added to the high order 8 bits of memory and crossing of page boundaries does not occur.

Indexed Absolute Addressing - (X, Y Indexing) - This form of addressing is used in conjunction with X and Y index register and is referred to as "Absolute, X", and "Absolute, Y". The effective address is formed by adding the contents of X or Y to the address contained in the second and third bytes on the instruction. This mode allows the index register to contain the index or count value and the instruction to contain the base address. This type of indexing allows any location referencing and the index to modify multiple fields resulting in reduced coding and execution time.

Implied Addressing - In the implied addressing mode, the address containing the operand is implicitly stated in the operation code of the instruction.

Relative Addressing - Relative addressing is used only with branch instructions and establishes a destination for the conditional branch.
the second byte of the instruction becomes the operand which is an "offset" added to the contents of the lower eight bits of the program counter when the counter is set at the next instruction. The range of the offset is -128 to +127 bytes from the next instruction.

Indexed Indirect Addressing - In indexed indirect addressing (referred to as (Indirect, X)), the second byte of the instruction is added to the contents of the X index register, discarding the carry. The result of the addition points to a memory location on page zero whose contents is the low order eights bits of the effective address. The next memory location in page zero contains the high order eight bits of the effective address. Both memory locations specifying the high and low order bytes of the effective address must be in page zero.

Indirect Indexed Addressing - In indirect indexed addressing (referred to as (Indirect), Y), the second byte of the instruction points to a memory location in page zero. The contents of this memory location is added to the contents of the Y register, the result being the low order eight bits of the effective address. The carry from this addition is added to the contents of the next page zero memory location, the result being the high order eight bits of the effective address.

Absolute Indirect - The second byte of the instruction contains the low order eight bits of a memory location. The high order eight bits of that memory location is contained in the third byte of the instruction. The contents of the fully specified memory location is the low order byte of the effective address which is loaded into the sixteen bits of the program counter.

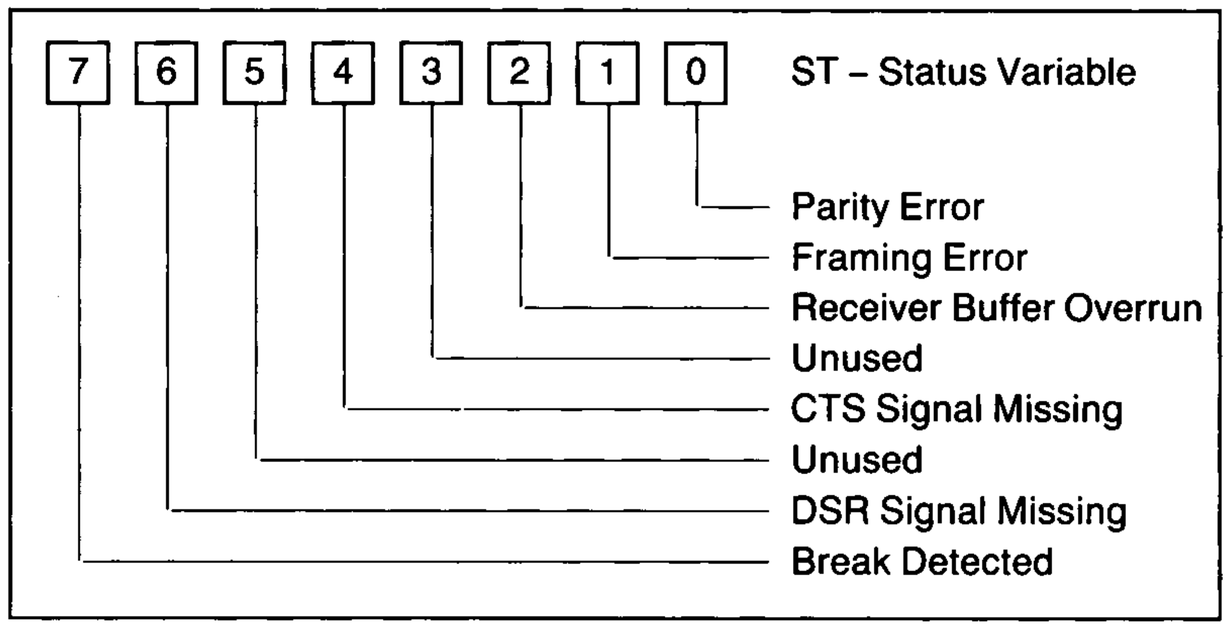
VIC 20 / C64 RS 232 Status



Notes:

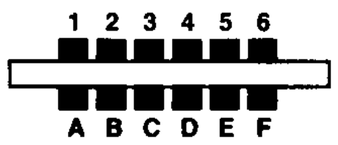
- If the LF# is 128 or greater, a Line Feed will be sent after each Carriage Return
- The Secondary Address SA does not affect RS 232 operation
- Before Closing the channel, check output buffer for data with:

```
VIC 20 : 100 IF ST = 0 AND (PEEK(37151) AND 64) = 64 THEN 100
         110 CLOSE LF
C64 :    100 SX = ST : IF (SX = 0 OR SX = 8) THEN 100
         110 CLOSE LF
```

IEEE 488 Bus Signals

Manager	ATN	Attention	The controller (PET/CBM/B) sets this signal low while it is sending commands on the data bus. When ATN is low, only peripheral addresses and control messages are on the data bus. When ATN is high, only previously assigned devices can transfer data.
Transfer	DAV	Data Valid	When DAV is low, this signifies that data is valid on data bus.
Manager	EOI	End or Identify	When the last byte of data is being transferred, the talker has the option of setting EOI low. The controller always sets EOI low while the last data byte is being transferred from the controller.
Manager	IFC	Interface Clear	The controller sends its internal reset signal as IFC low (true) to initialize all devices to the idle state. When the controller is switched on or reset, IFC goes low for about 100 milliseconds.
Transfer	NDAC	Data Not Accepted	This signal is held low (true) by the listener while reading. When the data byte has been read, the listener sets NDAC high. This signals the talker that data has been accepted.
Transfer	NRFD	Not Ready for Data	When NRFD is low (true), one or more listeners are not ready for the next byte of data. When all devices are ready, NRFD goes high.
Manager	SRQ	Service Request	Not implemented in BASIC, but available to the user.
Manager	REN	Remote Enable	REN is held low by the bus controller. The PET/CBM has a pin grounded that keeps REN permanently low.
Data	D101-8	Data Input/Output Lines 1–8	These signals represent the bits of information on the data bus. When a D10 signal is low, it represents 1 and when high 0.
General	GND	Ground	Ground connections: There are six control and management signal ground returns, one data signal ground return and one chassis shield ground lead.

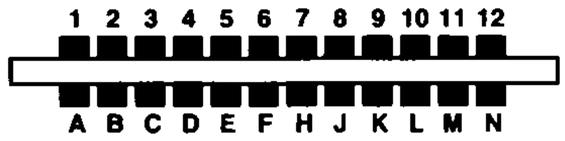
Cassette Port



Pin#	Name	Description
A–1	GND	Digital Ground
B–2	+5V	+5 Volts to operate cassette circuitry only
C–3	Motor	Computer controlled +6V for cassette motor
D–4	Read	Read line from cassette
E–5	Write	Write line cassette
F–6	Sense	Monitors closure of any locking type cassette switch

Note: Upper and Lower cassette pins are shorted

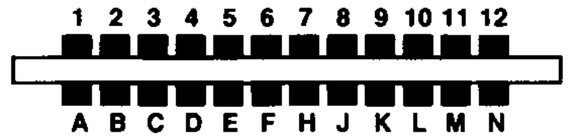
IEEE Port Pinouts



Pin #	Pin#*	Mnemonic	Definition
1	1	DIO1	Data Input/Output Line #1
2	2	DIO2	Data Input/Output Line #2
3	3	DIO3	Data Input/Output Line #3
4	4	DIO4	Data Input/Output Line #4
5	5	EOI	End or Identify
6	6	DAV	Data Valid
7	7	NRFD	Not Ready For Data
8	8	NDAC	Data not Accepted
9	9	IFC	Interface Clear
10	10	SRQ	Service Request
11	11	ATN	Attention
12	12	GND	Chassis Ground (IEEE cable shield)
A	13	DIO5	Data Input/Output Line #5
B	14	DIO6	Data Input/Output Line #6
C	15	DIO7	Data Input/Output Line #7
D	16	DIO8	Data Input/Output Line #8
E	17	REN	Remote Enable
F	18	GND	DAV Ground
H	19	GND	NRFD Ground
J	20	GND	NDAC Ground
K	21	GND	IFC Ground
L	22	GND	SRQ Ground
M	23	GND	ATN Ground
N	24	GND	Data Ground (DIO1–8)

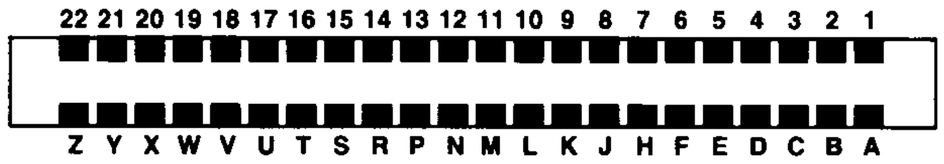
* Pin Numbers for Standard IEEE Cable Connector

PET/CBM User Port



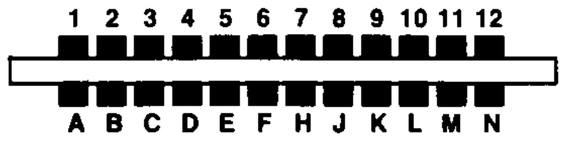
Pin#	Function	Description
1	Ground	System Ground
2	TV Video	Video Out for external displays
3	SRQ	Connected to IEEE SRQ
4	EOI	Connected to IEEE EOI
5	Diag Sense	Held low causes power up to Diagnostic routines
6	READ 1	Connected to cassette 1 read line
7	READ 2	Connected to cassette 2 read line
8	Write	Diagnostic tape write verify
9	Vert	TV Vertical for external displays
10	Horiz	TV Horizontal for external displays
11	GND	
12	GND	
A	GND	
B	CA1	Edge sensitive input of 6522 VIA
C	PB0	PB0–7 are independently programmable
D	PB1	for Input or Output
E	PB2	
F	PB3	
H	PB4	
J	PB5	
K	PB6	
L	PB7	
M	CB2	Special I/O pin of VIA
N	GND	Digital Ground

VIC 20 Expansion Port



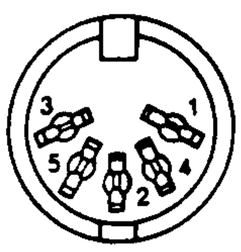
Pin#	Name	Description
1	GND	System ground
2	CD0	Data bus bit 0
3	CD1	Data bus bit 1
4	CD2	Data bus bit 2
5	CD3	Data bus bit 3
6	CD4	Data bus bit 4
7	CD5	Data bus bit 5
8	CD6	Data bus bit 6
9	CD7	Data bus bit 7
10	BLK1	8k decoded RAM/ROM block 1 @ $2000 (active low)
11	BLK2	8k decoded RAM/ROM block 2 @ $4000 (active low)
12	BLK3	8k decoded RAM/ROM block 3 @ $6000 (active low)
13	BLK5	8k decoded ROM block 5 @ $A000 (active low)
14	RAM1	1k decoded RAM block @ $0400 (active low)
15	RAM2	1k decoded RAM block @ $0800 (active low)
16	RAM3	1k decoded RAM block @ $0C00 (active low)
17	V R/W	Read/Write line from VIC Chip (high-read, low-write)
18	C R/W	Read/Write line from CPU (high-read, low-write)
19	IRQ	Interupt Request line to 6502 (active low)
20	NC	
21	+5v	
22	GND	
A	GND	
b	CA0	Address bus bit 0
C	CA1	Address bus bit 1
D	CA2	Address bus bit 2
E	CA3	Address bus bit 3
F	CA4	Address bus bit 4
H	CA5	Address bus bit 5
J	CA6	Address bus bit 6
K	CA7	Address bus bit 7
L	CA8	Address bus bit 8
M	CA9	Address bus bit 9
N	CA10	Address bus bit 10
P	CA11	Address bus bit 11
R	CA12	Address bus bit 12
S	CA13	Address bus bit 13
T	I/O 2	I/O block 2 (located at $9600)
U	I/O 3	I/O block 3 (located at $9C00)
V	Φ02	Phase 2 system clock
W	NMI	6502 Non-Maskable Interrupt (active low)
X	RESET	6502 Reset pin (active low)
Y	NC	
Z	GND	

VIC 20 User Port



Pin#	Function	Description
1	Ground	System Ground
2	+5V	(100 ma maximum)
3	RESET	Cold Start. Memory is destroyed
4	JOY 0	Joystick Switch 0
5	JOY 1	Joystick Switch 1
6	JOY 2	Joystick Switch 2
7	PEN	Light Pen Input. Also Joystick Fire Button
8	SENSE	Cassette Switch sense line
9	Serial ATN	Connected to Serial Bus ATN Line
10	9 VAC + Phase	Transformer output (50 ma. maximum)
11	GND	
12	GND	
A	GND	
B	CB1	
C	PB0	PB0–7 are independently programmable
D	PB1	for Input or Output
E	PB2	
F	PB3	
H	PB4	
J	PB5	
K	PB6	
L	PB7	
M	CB2	Special I/O pin of VIA
N	GND	

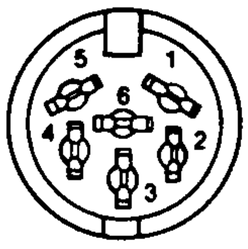
VIC 20 Audio/Video Port



Pin#	Name	Description	Colour
1	+5V	10 ma. maximum	Red
2	GND	System Ground	–
3	AUD	Audio Out	Grey
4	VID L	Video Low	Black
5	VID H	Video High	White

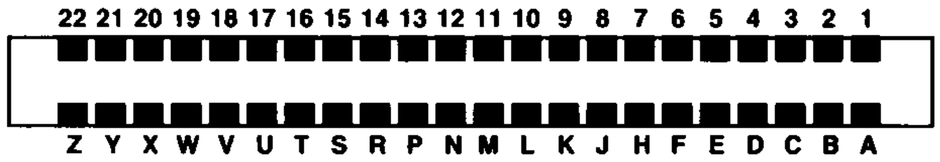
Colour refers to Radio Shack Part# 42-2394

VIC 20 / Commodore 64 Serial Port



Pin#	Name	Description
1	SRQ	Serial SRQ in (active low)
2	GND	System Ground
3	ATN	Serial ATN In/Out
4	CLK	Serial Clock In/Out
5	DATA	Serial Data In/Out
6	RESET	Resets all devices on Serial bus (active low)

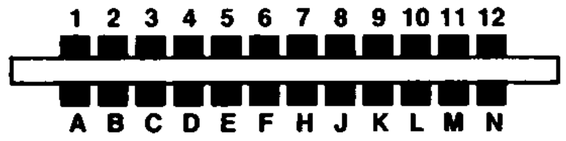
Commodore 64 Expansion Port



Name	Pin#	Description
1	GND	System Ground.
2	+5 VDC	Total User Port and Cartridge devices
3	+5 VDC	can draw no more than 450ma.
4	IRQ	Interupt Request line to 6502 (active low).
5	R/W	Read/Write.
6	Dot Clock	8.18 MHz video dot clock.
7	I/O 1	I/O Block 1 @ $DE00-$DEFF (active low) unbuffered I/O.
8	GAME	Active low TTL input.
9	EXROM	Active low TTL input.
10	I/O 2	I/O Block 2 @ $DF00-$DFFF (active low) buffered TTL output.
11	ROM L	8K decoded RAM/ROM block @ $8000 (active low) buffered TTL output.
12	BA	Bus Available signal from the VIC II chip - unbuffered - 1 is maximum load.
13	DMA	Direct Memory Access request line (active low input) is TTL input.
14	D7	Data bus bit 7 *
15	D6	Data bus bit 6 *
16	D5	Data bus bit 5 *
17	D4	Data bus bit 4 *
18	D3	Data bus bit 3 *
19	D2	Data bus bit 2 *
20	D1	Data bus bit 1 *
21	D0	Data bus bit 0 *
21	GND	System ground.
A	GND	System Ground
B	ROM H	8K decoded RAM/ROM Block @ $E000 buffered.
C	RESET	6502 RESET pin (active low) buffered TTL out/unbuffered in.
D	NMI	6502 Non-Maskable Interrupt (active low) buffered TTL out, unbuffered in.
E	Φ2	Phase 2 system clock.
F	A15	Address bus bit 15 *
H	A14	Address bus bit 14 *
J	A13	Address bus bit 13 *
K	A12	Address bus bit 12 *
L	A11	Address bus bit 11 *
M	A10	Address bus bit 10 *
N	A9	Address bus bit 9 *
P	A8	Address bus bit 8 *
R	A7	Address bus bit 7 *
S	A6	Address bus bit 6 *
T	A5	Address bus bit 5 *
U	A4	Address bus bit 4 *
V	A3	Address bus bit 3 *
W	A2	Address bus bit 2 *
X	A1	Address bus bit 1 *
Y	A0	Address bus bit 0 *
Z	GND	System Ground

* = Unbuffered, 1 is TTL load max.

Commodore 64 User Port

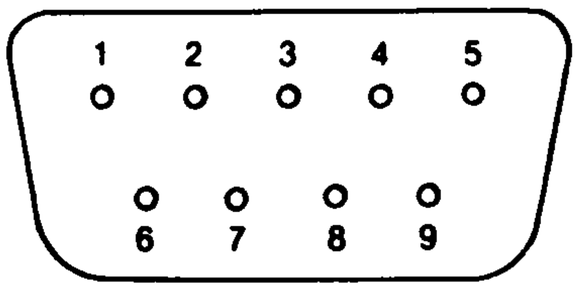


Pin#	Function	Description
1	Ground	System Ground
2	+5V	(100 ma maximum)
3	RESET	Cold Start. Memory is NOT destroyed
4	CNT1	Serial Port counter from CIA #1
5	SP1	Serial Port from CIA #1
6	CNT2	Serial Port counter from CIA #2
7	SP2	Serial Port from CIA #2
8	PC2	Handshaking line from CIA #2
9	Serial ATN	Connected to Serial Bus ATN Line
10	9 VAC +Phase	Transformer output (50 ma. maximum)
11	9 VAC -Phase	Transformer output (50 ma. maximum)
12	GND	
A	GND	
B	FLAG2	
C	PB0	PB0-7 are independently programmable
D	PB1	for Input or Output
E	PB2	
F	PB3	
H	PB4	
J	PB5	
K	PB6	
L	PB7	
M	PA2	Special I/O pin of CIA
N	GND	

Commodore 64 Audio/Video Port

Pin#	Name	Description
1	LUM	Luminance
2	GND	System Ground
3	AUD	Audio Out
4	COMP	Composite Video
5	JACK	Audio In
6	CHR	Chroma out
7	N/C	No connection
8	N/C	No connection

VIC 20 / Commodore 64 Joystick Ports



Pin#	Name	Description
1	JOY 0	
2	JOY 1	
3	JOY 2	
4	JOY 3	
5	POT Y	
6	FIRE	Also the Light Pen input. (C64 port 1 only)
7	+5V	100 ma. maximum
8	GND	System Ground
9	POT X	

Note: See Memory Map for reading Joystick Ports

Disk Utility-Command Set

Command	Abbreviation	Format
Block-Read	B-R	"B-R:" ch;dr;t;s
Block-Write	B-W	"B-W:" ch;dr;t;s
Block-Execute	B-E	"B-E:" ch;dr;t;s
Buffer-Pointer	B-P	"B-P:" ch;p
Block-Allocate	B-A	"B-A:" dr;t;s
Block-Free	B-F	"B-F:" dr;t;s
Memory-Write	M-W	"M-W" adL/adH/nc/data
Memory-Read	M-R	"M-R" adl/adh
Memory-Execute	M-E	"M-E" adl/adh
User Command	U	"ux:ch;dr;t;s

CH	The channel number in DOS: identical to the Secondary Address in the associated OPEN statement
DR	The Drive number: 0 (or 1 floppy dual drives)
T	The Track number: 1 through 154 (depending on the model#)
S	Sector number : 0 through 112 (depending on the model#)
P	The pointer Position for the buffer pointer
ADL	The Low byte of the Address (use CHR$(ADL))
ADH	The High byte of the Address (use CHR$(ADL))
NC	The Number of Characters: 1 through 34
DATA	The actual data in hexadecimal. This is transmitted by using the CHR$ function, ie. CHR$(17) would send the decimal equivalent of hexadecimal 11
X	The index to the user table
PARMS	The Parameters associated with the U command (optional)

Sector Distribution By Track

	Number of Sectors		
Track Number	4040	2031	1541
1 – 17	21	21	21
18 – 24	19	19	19
25 – 30	18	18	18
31 – 35	17	17	17

Track Number	8050	8250	
1 – 39	29	29	
40 – 53	27	27	
54 – 64	25	25	
65 – 77	23	23	
78 – 116		29	
117 – 130		27	
131 – 141		25	
142 – 154		23	

D9060/D9090 – 153 tracks per recording surface (4 on D9060 and 6 on the D9090) with 32 sectors per track

User Command Jump Table

Standard Syntax	Alternate Syntax	Function
U1	UA	Block-Read replacement
U2	UB	Block-Write replacement
U3	UC	Jump to $1300
U4	UD	Jump to $1303
U5	UE	Jump to $1306
U6	UF	Jump to $1309
U7	UG	Jump to $130C
U8	UH	Jump to $130F
U9	UI	Jump to $10F0 (NMI)
U:	UJ	Power-Up vector (reset)

BAM (Block Allocation Map) Formats

4040, 2031, and 1541 BAM Format – Track 18 Sector 00					
Byte#	Description	Data			
0–1	Track–Sector of first Directory block	18–00			
2	ASCII 'a' Identifies DOS 2.6 format	65			
3	Reserved for future DOS use	00			
4–143	Bit map of available blocks	tracks 1–35			

8050 BAM Format					
Byte#	Description	Data			
		BAM 1 Tr38 / Sc00	BAM 2 Tr38 / Sc03		
0–1	Track–Sector of next BAM block	38–03	39–01		
2	ASCII 'c' Identifies DOS 2.5 format	67	67		
3	Reserved for future DOS use	00	00		
4	Lowest track # mapped in this BAM block	01	51		
5	Highest track # (+1) mapped in this BAM block	51	78		
6	Number of unused blocks on track:	1	51		
7–10	Bit map of available blocks on track:	1	51		
11–255	(BAM 2: 11–140)Bit map of available blocks on tracks:	2–50	52–77		

8250 BAM Format					
Byte#	Description	Data			
		BAM 1 Tr38 / Sc00	BAM 2 Tr38 / Sc03	BAM 3 Tr38 / Sc06	BAM 4 Tr38 / Sc09
0–1	Track–Sector of next BAM block	38–03	38–06	38–09	38–01 (Dir)
2	ASCII 'c' Identifies DOS 2.7 format	67	67	67	67
3	Reserved for future DOS use	00	00	00	00
4	Lowest track # mapped in first BAM block	01	51	101	151
5	Highest track # (+1) mapped in first BAM block	51	101	151	155
6	number of unused blocks on track:	1	51	101	151
7–10	bit map of available blocks on track:	1	51	101	151
11–255	(BAM 4: 11–25)Bit map of available blocks on tracks:	2–50	52–100	102–150	152–154

D9060 / D9090 BAM Format – Track 1 Sector 0 (normal location)					
Byte#	Description	Data			
0–1	Track–Sector pointer to next BAM block	$FFFF = last			
2–3	Track–Sector pointer to previous BAM block	$FFFF = first			
4	Lowest track # mapped in this BAM block				
5	Highest track # (+1) mapped in this BAM block				
6	Number of blocks unused on this track				
7–10	Bit map of available blocks on this track				
11–255	Bit map of the next 49 tracks				

Directory Format

2031, 4040, 1541 Directory Header – Track 18 Sector 00		
Byte#	Data	Description
1–143		Reserved for 2031 BAM
144–161		Diskette name, padded with shifted spaces
162–163		Diskette ID number
164	160	Shifted space
165–166	50, 65	ASCII '2a' identifies DOS version and format
167–170	160	Shifted spaces
171–255	00	Not used

8050, 8250 Directory Header – Track 39 Sector 00		
Byte#	Data	Description
0–1	38, 00	Track–Sector to first BAM block
2	67	ASCII 'c' identifies DOS 2.5 format
3	00	reserved for future DOS use
4–5		Not used
6–21		Diskette name, padded with shifted spaces
22–23	160	Shifted spaces
24–25		Diskette ID number
26	160	Shifted space
27–28	50, 67	ASCII '2c' identifies DOS version and format
29–32	160	Shifted spaces
33–255	00	Not used

D9060 / D9090 Directory Header – Track 0 Sector 0		
Byte#	Data	Description
0–1		Track–Sector pointer to bad track and sector list
2–3	00,255	Identifies DOS 3.0 format
4–5	76, 00	Track–Sector of first directory block
6–7	00, 00	Not used
8–9	01, 00	Track–Sector of first BAM block

2031 Directory Blocks - Track 18 Sector 01 through 18

4040 Directory Blocks - Track 18 Sector 01 through 18

8050 Directory Blocks - Track 39 Sector 01 through 29

8250 Directory Blocks - Track 39 Sector 01 through 29

D9060 / D9090 Directory Blocks - Starting on cylinder 76, uses all Tracks - Sectors 00 through 31, then expands to additional blocks as required, providing 'unlimited' Directory size.

Byte#	Description
0–1	Track–sector pointer to next directory block
2	File type
3–4	Track–sector pointer to first file block
5–20	File name, padded with shifted spaces
21–22	Track–sector of first side sector if RELative file
23	Record length if relative file
24–27	Reserved for future file information
28–29	Track–sector pointer for replacement
30–31	Number of blocks used by the file
32–255	Seven more 32–byte file entries (same as 2–31 above, plus two additional unused bytes)

Additional Notes	
1	32 bytes per file entry, except the first entry is 30 bytes
2	Total of eight (8) file entries per directory block
3	File types are: Scratched Files $00 Sequential Files $01 Program Files $02 User–Defined $03 Relative Record $04
4	File type codes are OR'ed with $80 when file is properly closed
5	Track value of 00 in byte zero indicates the last used block in the directory. Sector value then shows next byte to use

Glossary

Access Time	– The time required for a computer to locate and transfer data to or from a storage medium.
Acoustic Coupler	– The two rubber cups on an acoustic modem that hold the receiver in place to allow transmission and reception of data.
Acoustic Modem	– A telephone modem that is not hardwired into the telephone lines, but uses a microphone and speaker to transmit data to and from the telephone.
Accumulator	– A location within the microprocessor that is used for storage of the result of an arithmetic or logic operation.
Address	– A location between 0 and 65535 in computer memory.
Algorithm	– A set of rules, usually mathematical, that help in solving a particular problem.
ANSI	– American National Standards Institute.
APL	– Advanced Programming Language.
ASCII	– The 'American Standard Code for Information Interchange'. Is an eight level code serial transmission of alphanumeric code. The first 7 bits represent 128 standard ASCII characters. The eighth bit is a parity bit for error checking. The eight data bits are preceded by one start bit and and followed by one or two stop bits.
Assembler	– A computer program that translates source code, ie. the actual written assembler program, into a machine readable form, the object code.
Backup	– The exact duplication of a diskette by the use of a dual disk drive and the backup procedure.
Bank Switching	– A method in which switching between various RAM locations can be achieved through software.
BASIC	– Acronym for Beginners All–purpose Symbolic Instruction Code.
Baud Rate	– The rate of which data is transmitted, which is expressed in terms of bits per second. Baud rate/10 equals bytes per second (approx.)
Binary Number	– A numbering system that uses either the digits 0 or 1 to express all numeric values. The binary digit is also known as the 'bit'.
Bit	– One eighth of a normal byte, in binary it is either a 0 or a 1 symbolizing yes or no, on or off, etc.
Block	– 256 characters of information, as stored on a diskette. Also known as a sector of a diskette.
Buffer	– RAM used for temporary storage of data until the data can be accepted by the device it is being sent to.
Bus	– The lines connecting the memory, microprocessors, and other portions of the computer or peripherals that send or receive data.
Byte	– The equal of one character of information, which is 8 bits. Numeric value of one byte can fall between 0 and 255 decimal.
CPU	– Central Processing Unit, the microprocessor.
COBOL	– COmmon Business Oriented Language.
COMAL	– COmmon Algorithmic Language. Written for Commodore machines in Denmark.
Compiler	– A computer program that will accept a program written in a language such as BASIC, then convert it over to a form that the computer will immediately understand, a machine language.
Daisy Wheel	– A print wheel that uses impact of a solid character to produce its impression. The daisy wheel is circular in design to allow for the wheel to spin around quickly to the correct character.
Density	– The number of bits in a single linear track measured per unit of length of the recording medium, ie. single or double density diskettes.
Data Transmission Rate	– The BAUD rate.
Direct Access	– A method of accessing information from a storage medium, such as a diskette, where the access time is not affected by the location of the data on the disk.

Glossary

Directory	– A list generated by the disk drive of all files currently stored on its diskette.
Diskette	– A thin, flexible magnetic disk permanently enclosed in a semirigid protective jacket.
DOS	– The 'Disk Operating System' which controls all of the actions of the disk drive.
Dot Matrix Printer	– A printer head that forms it characters by the use of numerous metal pins to punch out the image required on paper.
Dynamic memory	– A form of random access memory that maintains its stored information by constant refresh cycles.
Dynamic	– In a constant state of change. (ie. variables)
EPROM	– Erasable Programmable Read Only Memory. Is a form of ROM that can be erased by ultraviolet light, and re–programmed when necessary.
EAROM	– Electrically Alterable Read Only Memory. Is a form of ROM that will remain constant under normal operating conditions, but whose contents can be modified by a series of deliberate electrical signals.
File	– A collection of related records brought together as one, single unit.
File Type	– Pertaining to Commodore DOS, there are four different file types. These are PRoGram, SEQuential, RELative, and USeR.
Flag	– A single storage bit used to signal the occurence of a certain condition.
Floppy Disk	– A diskette
Flow Chart	– A logical diagram of the order in which a particular problem is thought to be resolved. Usually required when complex computer programs are to be written.
Formatting	– Pertaining to Commodore DOS, is the process of organizing a diskette into specific tracks and sectors to allow for storage and retrieval of information.
FORTRAN	– An acronym for FORmula TRANslating system, a high level computer language.
Full Duplex	– In communications, the simultaneous transmission and reception of data, unlike half–duplex.
Graphic Plotter	– A device that connects to the computer, and is controlled by the computers software to draw exact patterns as determined as the computed X and Y co–ordinates.
Half–Duplex	– In communications, allowing only one way data transmission or reception at any one single time. Compares in principal to an inexpensive walkie talkie.
Hard–Copy	– Refers to any printed output in general.
Hard Disk	- A totally self enclosed data storage system. The disk itself is sealed inside the unit, and rotates at approximately 3500 RPM to allow for high speed access to information. A special feature of this type of storage system is the vast amount of storage space available in relation to a floppy disk system.
Hardware	– The actual physical components of a computer system, ie. computer, peripherals, magnetic storage media, paper etc.
Hexadecimal	– A numbering system with the base 16. Its digits range from 0 through F.
High–Level Language	– A computer language such as BASIC, COBOL, FORTRAN, PASCAL, APL and PL/1, to name a few, that use english like commands in the design of computer programs.
Impact printer	– A printer which forms its characters by the physical striking of the ribbon and paper.
Increment	– To increase the value of by a certain quantity.
Interactive language	– A high–level language that allows execution, modification, then re–execution again, for as many cycles as required. BASIC is one example of such a language.
Interface	– A wiring device to connect two or more devices together in a harmonious existence, where data can be transmitted or received accurately.
Interpreter	– A computer program that translates and executes each statement in a program entirely before attempting to continue on to the next statement in line. This is a built in feature of Commodore BASIC.

Glossary

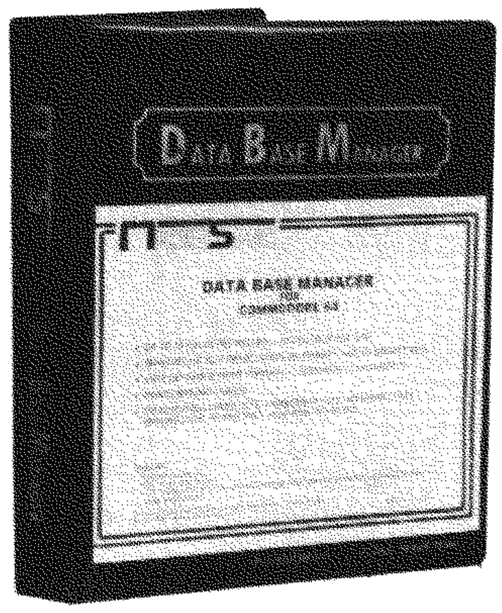
Interrupt Driven	– A program whose execution is activated by the computers operating systems attempts to check its various interrupt routines. Similar to a water wheel placed in a fast moving river. Very little change in the flow if the river but the water wheel is allowed to operate.
I/O	– An abbreviation for Input/Output, or the transmission to and from the microprocessor.
Jump	– In assembler, a branch to a section of code other then what the normal program flow would expect.
K	– In reference to storage capacity, it is equal to 1024 bytes of data.
Light Pen	– A hand–held, light–sensitive device that is wired directly to the computer to allow the light–pen/ screen positions to be transmitted to the computer for analysis and re–action.
Low–Level Language	– A computer language, such as assembler, that requires very little translation to become acceptable by the computer.
Machine Language	– A programming language that is immediately understandable by the computer, therefore not requiring any translation at all. In reality not a language as such but a coding of binary digits.
Matrix Printer	– Dot Matrix Printer.
Memory Map	– A listing of addresses and corresponding functions for all RAM and ROM locations within the computers memory.
Microprocessor	– The central processing unit of a microcomputer containing the control unit, arithmetic logic unit, and a number of storage location, all within one small silicon chip.
Modem	– A device that MOdulates and DEModulates signals transmitted over the telephone lines, from analog to digital and vice–versa.
Monitor	– A video–display, similar to a television screen, that is used for computers and other electronic devices requiring a stable video output.
Mnemonic Code	– A set of abbreviated commands designed to help make the writing of an assembly language program simpler for the programmer.
Network	– A number of computers and peripherals connected together through either a form of timesharing system, or over the telephone lines in a similar manner.
Nibble	– A group of 4 bits, or one half of a byte.
Null String	– A string variable without any characters in it.
Object Code	– The compiled, or machine code version of what was originally a source code program.
Operand	– The address of a unit of data to be operated upon.
Operating system	– The software that controls the execution of all computer programs, the diagnostic system to help in the debugging process, all input/output, all housekeeping duties of the computer, and all else that go into the running of the system. In Commodore, the operating system is located in ROM.
Output device	– A device, or one in a series of devices used to collect data from another device. To alleviate confusion, the printer is an output device when accepting data from the computer to be printed.
Pascal	– A high–level programming language.
Parallel	– A type of port or interface that allows all eight bits of data to be transmitted at the same time, each through a separate piece of wire.
Peek	– A BASIC keyword used to look at a position in memory to determine the value located there.
Peripheral	– Any number of external devices that can be used with the computer to increase its productivity.
Pixel	– One graphic point on the computers screen. The type of computer, the graphic mode of operation it is in, and the resolution capabilities of the screen determine how high of resolution will be viewed.
Poke	– A BASIC keyword used to store a numeric digit between the values of 0 and 255, within memory.
Port	– A connection point on a computer to connect an external interface to with some form of peripheral.

Glossary

PROM	– Programmable Read Only Memory. A memory storage chip that may be programmed by someone other than the manufacturer. This chip can only be written to once, and becomes a permanent modification when the process is complete.
QWERTY	– On a full sized typewriter keyboard, or computer terminal, the first six letters in the third row are QWERTY
RAM	– Random Access Memory. As the name implies, this memory is such that access to it can be made in a total random sequence. When the power is turned off with this type of memory, all contents are lost.
Read	– The operation performed by the computer as it takes in new information from an input device.
Read/Write Head	– The piece of hardware that can take information from, or write information to a magnetic storage medium.
Register	– A number of small temporary storage locations within the computer, that are used for such things as the operating system, and other functions that the programmer may require.
Resolution	– The number of pixels (points) that can be displayed on a computer screen both horizontally and vertically.
ROM	– Read Only Memory. As the name implies, the contents of this section of memory can be read from, but not written to. When the power is turned off, the contents of ROM are retained.
Sector	– An area on diskette that is comprised of 256 characters of information. Also know as the block, this block is read and write compatible, and can be accessed by the experienced programmer, or left up to the devices of the disk drive itself.
Sequential Access	– A manner in which to read or write data as complete blocks of information, with each byte accessed in the exact order in which was stored.
Serial	– A type of port or interface that allows only one bit of data to be transmitted at a time through one the data line.
Software	– A computer program and its supporting documentation.
Source Code	– A high level language program that requires interpretation or translation into a form acceptable by the computer before processing.
Static Memory	– A form of RAM whose contents are stable as long as the computer is turned on. Unlike dynamic RAM, there is no refresh cycle required.
Storage Capacity	– The amount of data that a device can accept for storage, usually expressed in bytes.
String	– A set of alphanumeric characters stored within memory that can be recalled, modified, or transmitted to peripheral device such as a printer, disk drive, cassette drive, modem, etc.
Syntax	– The correct grammatical design of a computer program according to the particular rules set down when the computer language was designed.
Synchronous	– Occurring simultaneously with a regular or predictable time relationship.
Thermal Printer	– A dot–matrix printer producing its printed characters by the use of a dot–matrix pattern that has been adapted electrically and heat sensitive paper.
Track	– With reference to a diskette, a track is one circular portion of a diskette surface that is further subdivided into sectors, or blocks of information.
Variable	– An area of identifiable storage space that can be read or altered as necessary. Variable length cannot exceed 255 characters.
Volatile Memory	– A form of computer memory that loses its contents after the power has been turned off. Random access memory, or RAM is an example of this.
Write	– A store a section of computer memory, or a quantity of produced data on an external storage medium such as diskette or cassette.
Write Protect	– In order to avoid losing stored data on cassette or diskette storage mediums, write protecting is a method to stop any unintentional damage.

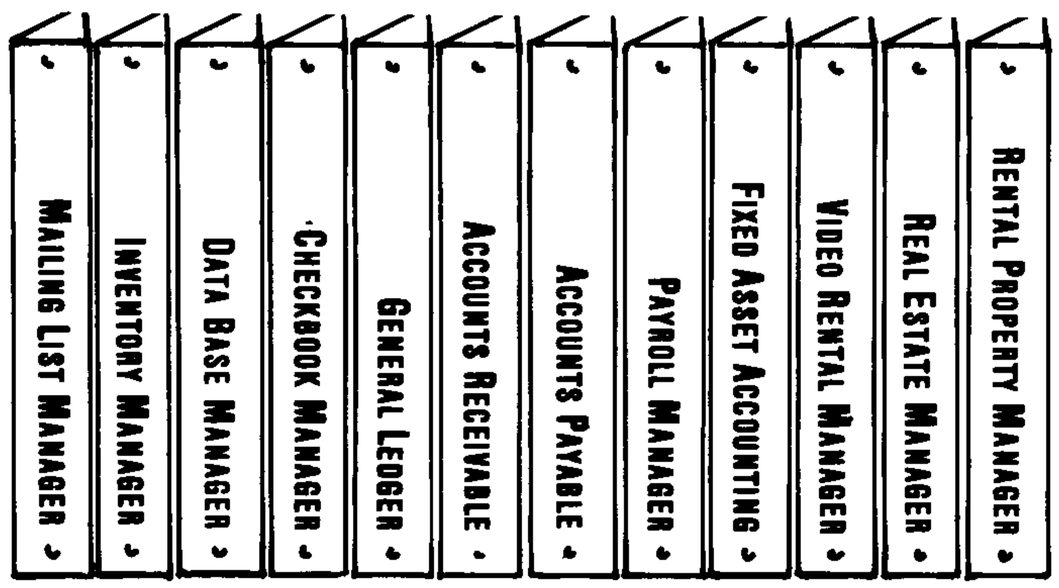
MICROSPEC

SOFTWARE MEANS BUSINESS FOR THE COMMODORE 64



When it's time to get serious, it's time to boot up MicroSpec business software. Our complete line of business software is made to give you some real applications for your Commodore 64. From data base management to full accounting software, we have the package for you.

It's attention to detail that makes our packages so beautiful and makes them stand out from the rest. We realize that most people are first time users, so we designed all our packages to be completely menu driven and user prompted for each input. We also know that most people use only one disk drive, so we designed all our packages to virtually eliminate disk swapping. Other features like non destructive input routines really make our software easy to use. But all this doesn't restrict you. Pure random access file structure maximizes your disk capacity and allows you to bring up any record for viewing in less than a second.



In our efforts to put together the best packages available, we worked on more than the software. We took the same approach with the documentation as the software. We made it complete and easily understood for the first time user. We even provide sample reports in many cases.

The Demonstration Package, which shows how each program runs, is available for $19.95. So, if you're serious about your 64, call or write for a complete brochure or **go right down to your nearest computer retailer for a demonstration.**

MPI INTRODUCES SUPER ACTION MEMORY EXPANDER BOARD FOR VIC 20*

Adds 24K and 3 Expansion Slots With Switches and Fuse $109.95

(Expandable To 35K By Simply Adding Memory Chips and Switches)

INTRODUCTORY PRICE

$109.95

Transfer Cartridges To Tape

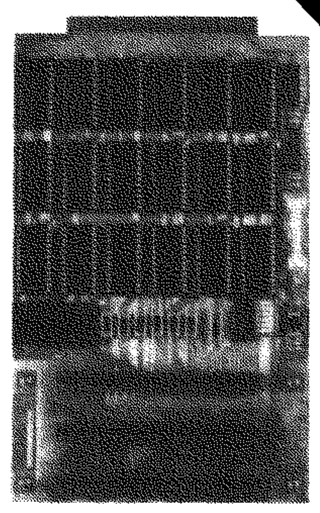
Evade Self Destruct Code With Write Protect Switch

All Boards Factory Tested

Complete Instructions And Illustrations Included.

Fuse Protected

Reset Switch



Pictured Above –
Action Board with all options

24K BOARD FEATURES:

- *Adds 24K Memory (29K with VIC* 5K).
- *Upgrade Board to 35K by adding IC's and switches.
- *Memory switchable in 8K sections. (No need to remove memory board to run your other programs).
- *3 expansion slots with switches (for game or extra utility cartridges).
- *Reset button allows restarting computer without turning power off.
- *.5 amp fuse protected.
- *Switch relocates expansion cartridges in memory so that it can be saved on tape as a backup for your valuable programs. (The unexpanded VIC will not allow cartridges to be saved on tape).
- *Write protect switches allow programs stored in RAM at ROM location or entire Memory to be protected against accidental write.
- *Switch allows memory to be moved between RAM and ROM location. (Useful for developing your own games and saving on tape).
- *Gold plated card edge connector.
- *No other memory expansion needed.
- *Easily plugs into your VIC, no modifications necessary. Saves wear on your VIC 20 since board never needs to be removed or power turned off and on to run other tapes or cartridges.
- **Optional 35K memory (40K with VIC* 5K).

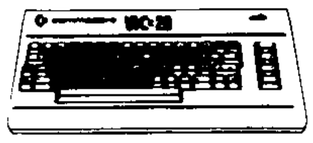
24K memory, 3 expansion slots, switches assembled and tested **$109.95**

Same as above with sockets that allow you to later add your own memory chips to bring memory from 24K to 35K **$124.95**

Full 35K memory, 3 expansion slots, 3K expander mode, eprom socket (switch selectable between BLK 3 & BLK 5) and all switches assembled and tested (eprom not included) **$149.95**

Bare 35K board with complete instruction and parts list **$39.95**

Prices are in US dollars.



VIC 20* is a registered trademark of Commodore.

Reduction of an actual sign

The Banner Machine™

For the Commodore 64 (with 5 fonts) or the VIC-20 with 24K memory. • Use on any Epson MX with Graftrax or the FX and RX printers. • Menu-driven program operates like a word processor. • Makes signs up to 10" tall by any length. • Makes borders of variable width up to ¾". • 8 sizes of letters from ¾" to 6½" high. • Proportional spacing; Automatic centering; Right and left justifying. $49.95 Tape or Disk (Specify computer equipment)

For the Commodore 64:

Space Raider An amazing arcade simulation. Your mission is to destroy the enemy ships. $19.95

Super Roller Challenging dice game. Sprite graphics and sound. Yahtzee-style rules of play. $14.95

Formulator A formula scientific calculator designed for tasks which require repetitive arithmetic computations. You can save formulas and numeric expressions. $39.95

Preschool Educational Programs ABC Fun; 123 Fun; and Ginger the Cat with: Addition and Subtraction, Number Hunt, and Letter Hunt. All programs have bright color, music, and action. Each $14.95

Microbroker Exciting, realistic and educational stock market simulation based on plausible financial events. $34.95 Tape or Disk

Sprite Editor The easy way to create, copy, alter, and save up to 224 sprite shapes. $24.95

Cross Reference Generator for BASIC programs Displays line numbers in which any word of BASIC vocabulary appears. Allows you to change variable name and ask for lines where it appears, and more. $19.95

For the VIC-20:

Caves of Windsor A cave adventure game. The object is to restore wealth and happiness to the small village of Windsor. $14.95

Burger & Fries Fast action joystick game. Eat the burgers and fries but avoid the shakes for a top score. $14.95

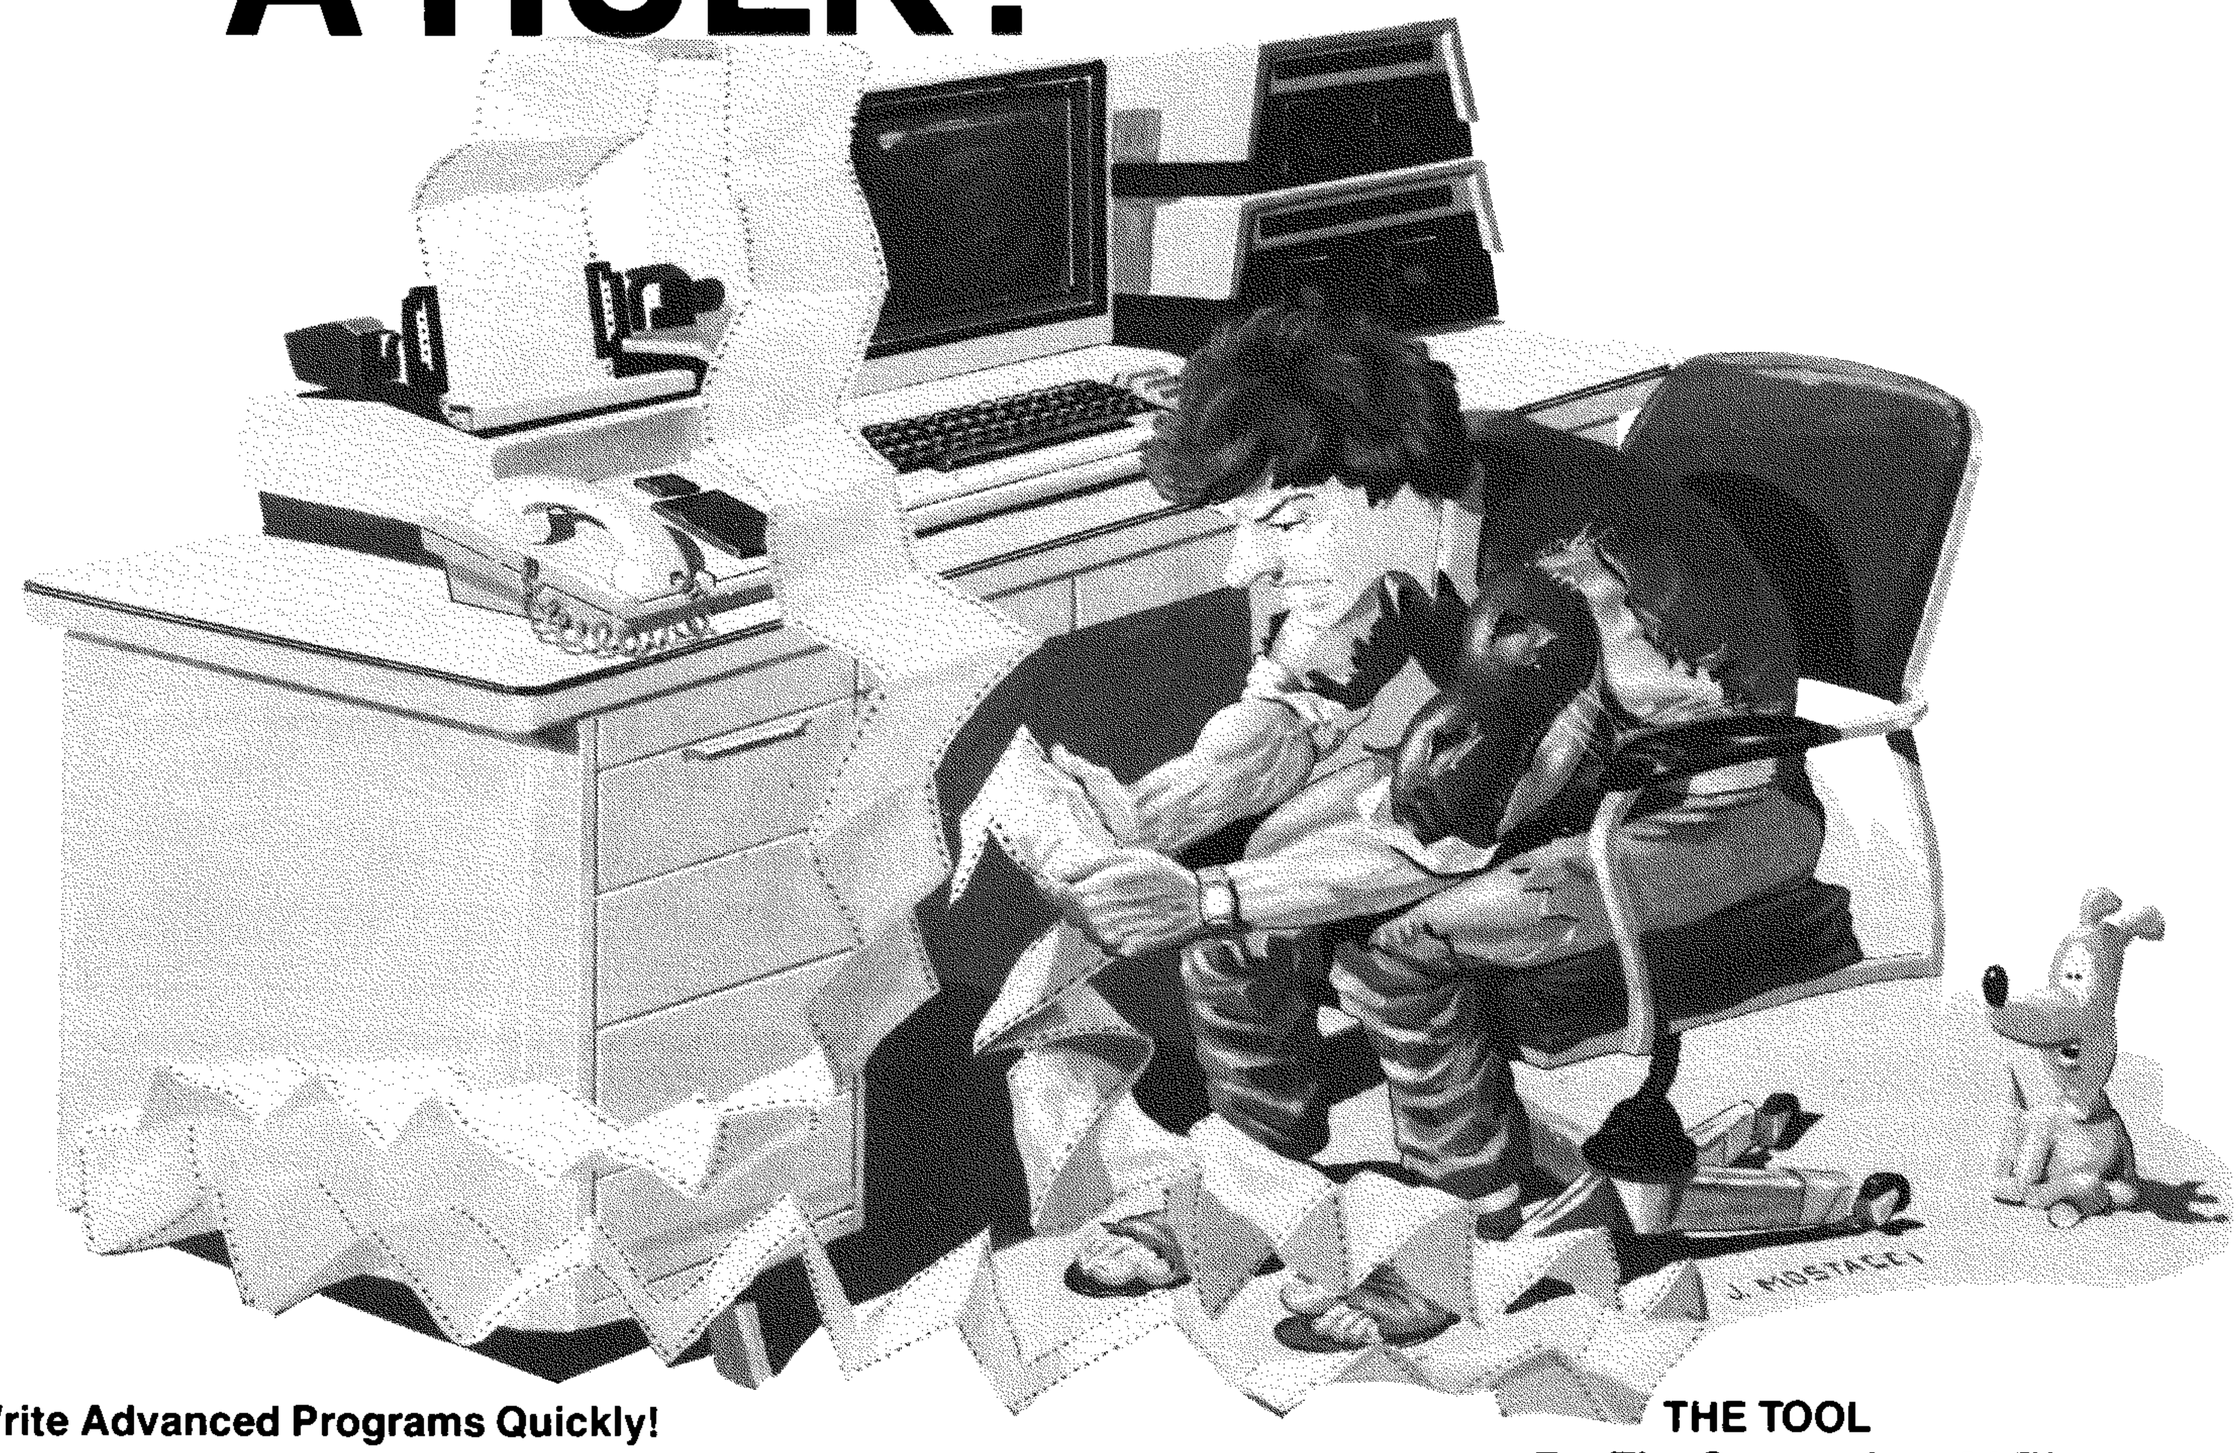
IS PROGRAMMING TURNING YOU INTO A HULK?



Write Advanced Programs Quickly!

Tired of writing reams of code? Take a quantum jump into the future! Tommorrow's programmers are using software development tools such as THE TOOL. THE TOOL lets you make use of powerful machine language subroutines. Your programs will execute fast using less code. Input/output routines and professional looking screens are easily created.

Features of **THE TOOL** include :

- Screen Design functions which allow controlled input and output
- High Resolution Graphics with alpha/numeric display
- Screen Save and Load functions (for hi-res and text screens)
- Structured BASIC instructions , e.g. IF THEN ELSE
- Programming Aids (e.g. auto, renumber, delete, find, trace, hardcopy)
- 2 keystroke disk commands (DOS support extensions)
- Game Design Instructions (joy, scroll, screen, colour)
- A 50 page user manual

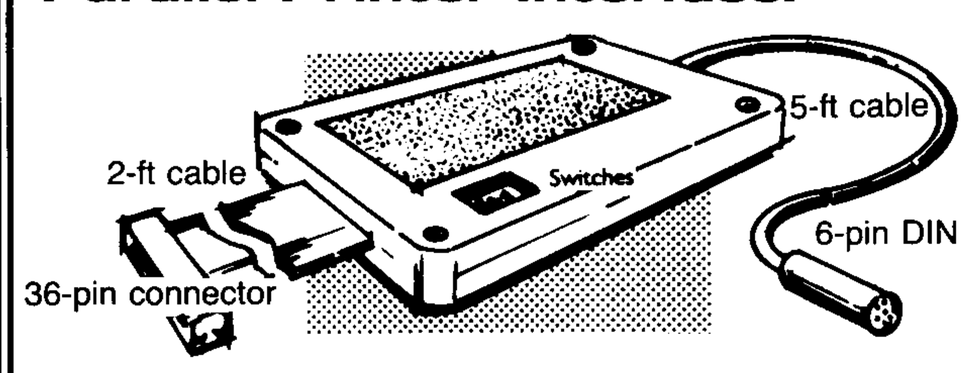
MW-302: VIC-20/64

Parallel Printer Interface.



Works with all centronics type parallel matrix & letter printers and plotters—Epson, C.Itoh, Okidata, Nec, Gemini 10, TP-I Smith Corona, and most others. Hardware driven; works off the serial port. Quality construction: Steel DIN connectors & Shielded cables. Has these switch selectable options: Device 4, 5, 6 or 7; ASCII or PET ASCII; 7-bit or 8-bit output; upper & lower case or upper only. Recommended by PROFESSIONAL SOFTWARE for WordPro 3 Plus for the 64, and by City Software for PaperClip.

STOCK HELPER™

Commodore 64 and VIC-20

Stock HELPER is a tool to maintain a history of stock prices and market indicators on diskette, to display charts, and to calculate moving averages. Stock HELPER was designed and written by a "weekend investor" for other weekend investors.

Stock HELPER is available on diskette for:

Commodore 64	$30.00	($37.00 Canadian)
VIC-20 (16K)	$27.00	($33.25 Canadian)

plus $1.25 shipping ($1.55 Canadian)

The VIC-20 version only charts 26 bi-weekly periods rather than 52 weekly periods.

Intelligent Software for the Commodore computers

Catalog 5/1/83

My line of programs (such as it is) consists of the following products. All are written for Commodore computers; any of my programs will load and run without modification in the entire line (including older PET's).

1. Word Processor; $25. It includes the following features: VERY fast file routines, including a disk file catalog; automatic form handling on tractor- or friction-feed printers; fully imbedded margin, justification, spacing, formatting, and paging controls; block commands and error-trapping in editing mode; and a spool routine (formatted output to disk for later mass printing). I believe W/P is the most thoroughly tested, user-oriented word processor available at this time at anywhere near the price. for any machine. Requires a minimum of 10k of memory (8k expansion on VIC), and a printer.

2. Copycalc; $20 ($15 if ordered with another program). Copycalc is a simplified version of the "electronic spreadsheets" that are becoming extremely popular for use on personal computers. It allows the user to set up a visible grid of numbers on the screen, and use the screen-editor to make changes in the grid, with the totals reflecting the changes. Requires 6k RAM (3k expansion on VIC); smaller version available for unexpanded VIC.

3. Baseball Manager; $30. This program maintains complete batting statistics for a baseball or softball league of up to 250 players. It generates reports on a player, team, or the entire league (including standings). It requires a minimum 10k of RAM; a printer is suggested but not required.

4. Inventory; $30. A general-purpose perpetual inventory control program. It produces a variety of reports, including order forms; multiple vendors are supported. Requires 10k of RAM; a printer is suggested.

All programs: support cassette and disk files and the CBM printers (easily modifiable to other printers), come on cassette, and include documentation. Prices include shipping; Calif. residents add 6%. All programs are copyrighted by the author; those rights will be enforced. Programs available from:

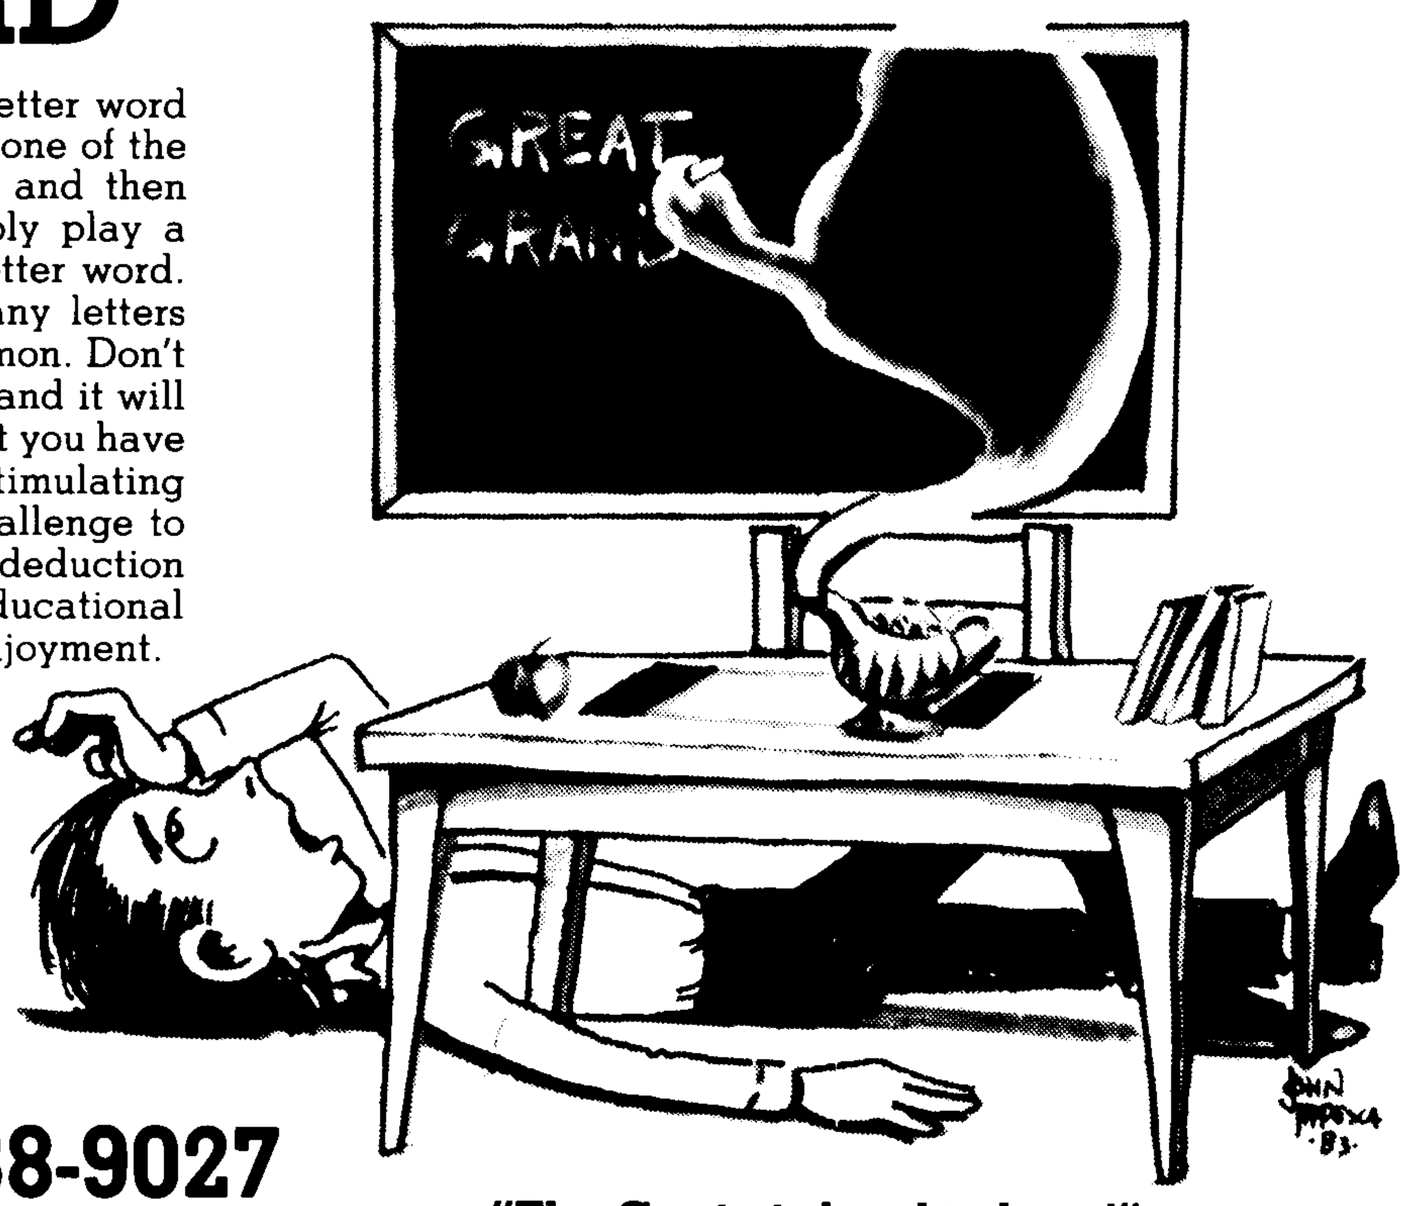
William Robbins, Box 3745, San Rafael, CA 94912

Disk Software for the Commodore 64™

JOT-A-WORD™

A computerized version of the old five letter word game. Simply pick a secret five letter word (one of the almost 5000 words contained on the disk) and then play against the Jot-A-Word Genie or simply play a solitaire version. Start by typing in a five letter word. The Genie responds by telling you how many letters your guess and the secret work have in common. Don't try to cheat, because the Genie is too smart and it will not accept non-words or continue a game that you have given it wrong scores. This is a simple but stimulating game for ages 9 to senior citizen. A real challenge to your intellect, reasoning powers, logic and deduction skills. It's simply hard to beat; as a fun and educational experience! Graphics and music add to the enjoyment.

MasterCard VISA



"The Genie is hard to beat!"

PRO GOLF

Here is your chance to play golf on a championship course without all the headaches of getting a tee time, waiting for that slow foursome ahead of you, losing balls, getting rained out or spoiling a good handicap. This game may be played in the privacy of your home or in a clubhouse lounge for the enjoyment of many members. A challenge to even the best players, this game requires a high degree of practice, expertise and accuracy to attain a good score.

PRO GOLF Features :

- A full range of golf clubs (driveway, fairway wood, wedge and irons 2–9)
- Realistic shot distances depending on club and swing
- The ability to hook or slice a shot
- Up to 4 players in one game
- Detailed, colourful screen layouts of 18 different holes (tee, trees, sandtraps, rough, water, out of bounds)
- Simulated ball reaction to course hazards (e.g. ball bounces off trees)
- Hole distances, par, yards to green, strokes taken on hole, total strokes per round and player totals displayed
- A full screen enlargement of greens for putting
- Accurate putting simulation for angle and distance
- Practice of real golf skills – club selection, type of shot (normal, hook, slice), length of swing, special shot strategy (e.g. chipping, getting around or over trees, water, sandtraps)

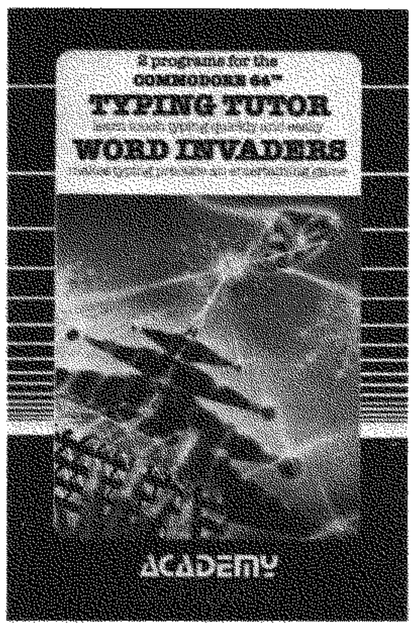
VIC 20™ COMMODORE 64™

JOIN THE COMPUTER REVOLUTION WITH A MASTERY OF THE KEYBOARD!

In the age of the computer, *everyone* from the school child to the Chairman of the Board should be at home at the computer keyboard. Soon there will be a computer terminal on every desk and in every home. Learn how to use it right ...and have some fun at the same time!



Rated THE BEST educational program for the VIC 20™ by Creative Computing Magazine

TYPING TUTOR PLUS WORD INVADERS

The proven way to learn touch typing.

COMMODORE 64 Tape $21.95 COMMODORE 64 Disk $24.95
VIC 20 (unexpanded) Tape $21.95

Typing Tutor plus Word Invaders makes learning the keyboard easy and fun! Typing Tutor teaches the keyboard in easy steps. Word Invaders makes typing practice an entertaining game. Highly praised by customers:

"Typing Tutor is great!", "Fantastic", "Excellent", High quality", "Our children (ages 7-15) literally wait in line to use it.", "Even my little sister likes it", "Word Invaders is sensational!"

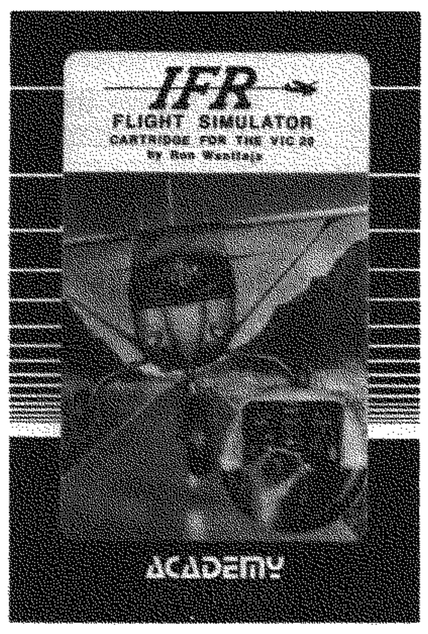
Customer comment says it all . . .

". . . it was everything you advertised it would be. In three weeks, my 13 year old son, who had never typed before, was typing 35 w.p.m. I had improved my typing speed 15 w.p.m. and my husband was able to keep up with his college typing class by practicing at home."

NEW!

IFR (FLIGHT SIMULATOR) CARTRIDGE FOR THE VIC 20

$39.95
JOYSTICK REQUIRED



Put yourself in the pilot's seat! A very challenging realistic simulation of instrument flying in a light plane. Take off, navigate over difficult terrain, and land at one of the 4 airports. Artificial horizon, ILS, and other working instruments on screen. Full aircraft features. Realistic aircraft performance — stalls/spins, etc. Transport yourself to a real-time adventure in the sky. Flight tested by professional pilots and judged "terrific"!

VISA Shipping and handling $1.00 per order. CA residents add 6% tax. MasterCard

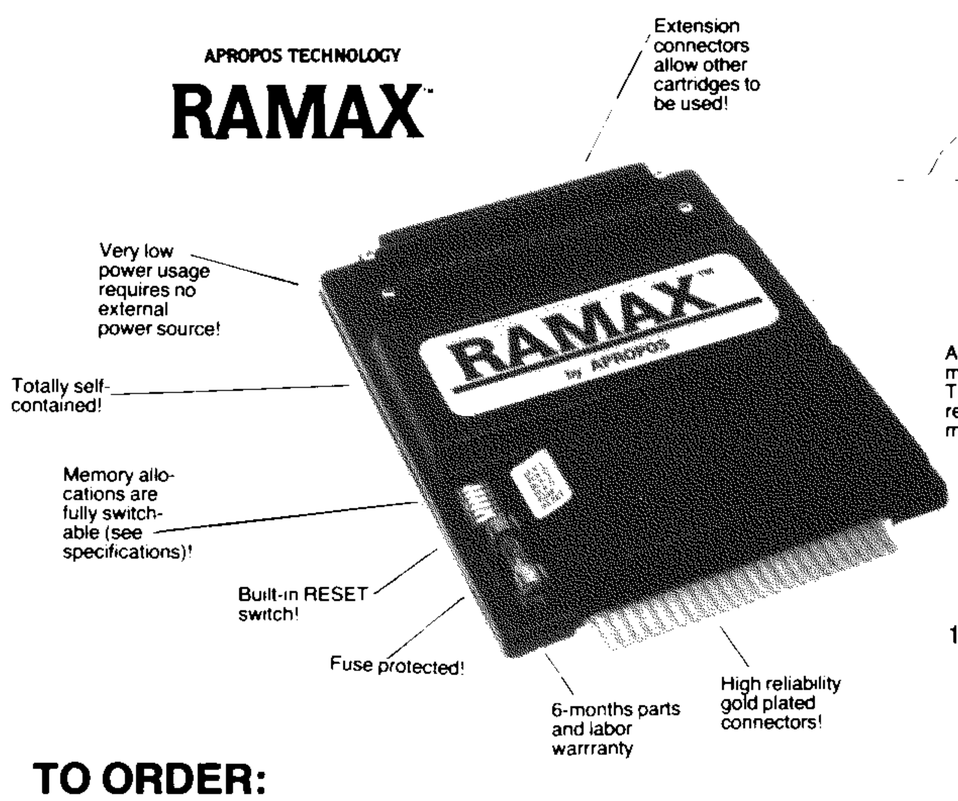
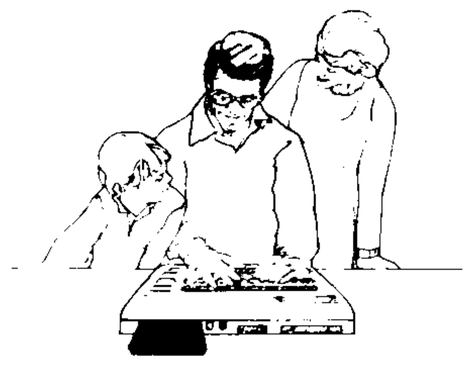
APROPOS TECHNOLOGY

RAMAX™





A perfect investment to give your family and yourself more enjoyment and use from your home computer! The ease of operation, the neat appearance, and the real POWER it adds to your VIC at this low price makes it a MUST for every VIC home!

SPECIAL LOW PRICE!

Only $149.00

Price includes shipping and handling within Continental USA. Foreign orders please add $15.00. Calif. Residents add 6% sales tax.

10 DAY MONEY-BACK GUARANTEE
If not satisfied, simply return in original condition for your money back.

RAMAX Jr.™

Already own an 8k Expander? Get the NEW **RAMAX Jr.™**! Identical to the RAMAX™ except with 19k instead of 27k. Our instructions will show you how to use your 8k as BLK 3 with Jr. to get the full complement of memory!

Special Only $129.00
Shipping included

To equal the total memory of RAMAX™ you would have to buy a 16k Memory Expansion, PLUS an 8k Expansion, PLUS 3k Expansion. THEN you would need a "mother board". With RAMAX™ you buy just ONE piece . . .at ABOUT HALF THE PRICE!

RAMAX™ Features and Specifications:

- Adds up to a full 27k bytes of additional RAM to the standard VIC-20's internal RAM of 5k.
- Built-in switch allows User selection of any combination of 5 areas or RAM memory*:

  BLK1 (8k: Adr. 8192-16383
  BLK 2 (8k: Adr. 16384-24575)
  BLK 3 (8k: Adr. 24576-32767)
  BLK 5 (Adr. 40960-49151, allows/disallows 8k ROM games)
  RAM (3k: Adr. 1024-4095)
  RESET (Resets computer without power off/on)
- Built-in electrical Fuse to protect equipment.
- Totally self-contained. No external power supply needed.
- Two (2) extension connectors allow ANY additional cartridges and/or devices designed for the VIC expansion port.
- Very low power consumption (.175 amp usual).
- High reliability gold-plated connectors are designed for long life.
- Complete Operating Manual.
- 6 month parts and labor warranty to original purchaser.
- Factory service.

*Many VIC-20 cartridges and programs require certain configurations of the memory (i.e certain games will only run on the unexpanded VIC while others require the upper portion of the expanded memory). With RAMAX™ you have switches that turn-on and turn-off portions of the memory to provide the right area of memory - all without plugging or unplugging. It's so easy!

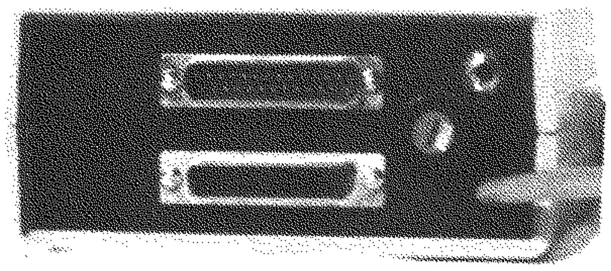
ZANIM SYSTEMS

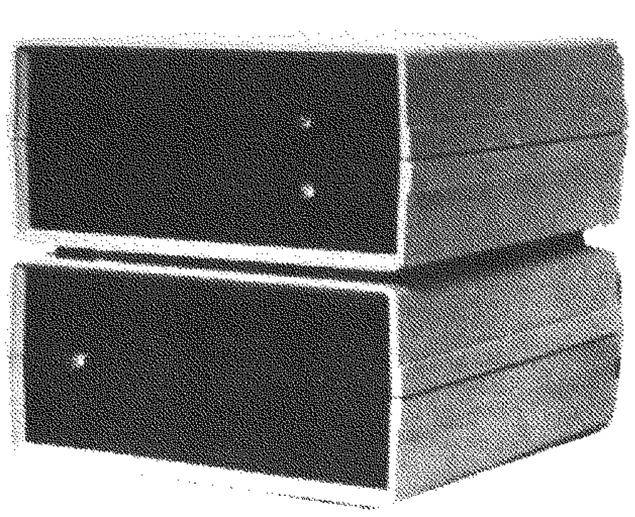
HOME CONTROL FOR YOUR VIC UNDER $200



The ZCM-1 is the Master Control module that provides the interface between your computer and our line of Zanim Application Modules. Up to 15 Application Modules can be piggy-backed to the ZCM-1 Master Control module. The ZCM-1 is compatable with any standard RS-232 (serial) interface. A special Master Control module, the ZCM-1V is available for the VIC-20 and Commodore-64 computers.

*The ZCM-1V is available for VIC-20 and C-64 users.

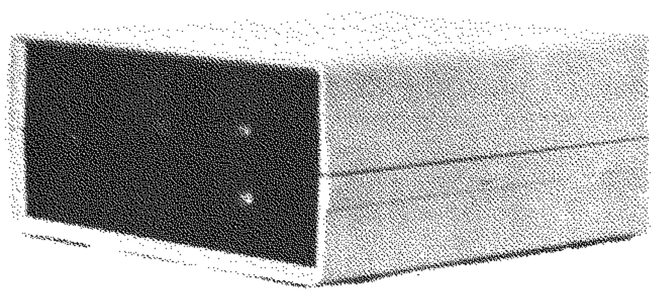
VIC/C64 $129.95
RS-232 $149.95



ZAM-1 is the home control interface module that provides a fully versatile computer controlled environment. ZAM-1 can control up to 256 different lamps and appliances in your home or business providing you with an effective and easy to implement energy management and electric control system. No special modifications are necessary to your building as all control signals are sent over your existing wiring. ZAM-1 can be programmed in BASIC or optional home control software is available. ZAM-1 requires one ZCM-1 Master Control module.

*The ZCM-1/ZCM-1V Master Control module is required to use the ZAM-1 Home Control module.

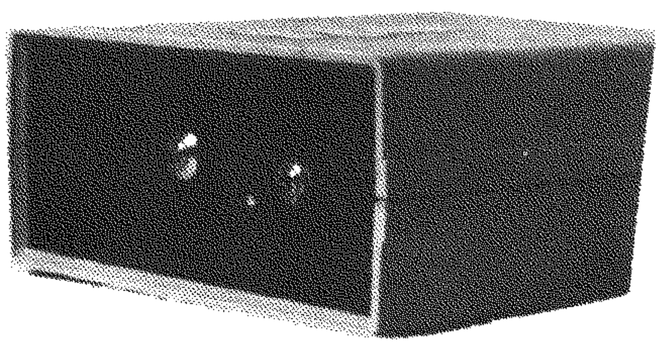
$169.95



The ZAM-2 allows your computer to continuously monitor up to 15 different doors or windows around your home or business. ZAM-2 is a basic building block in a complete computer controlled home security system. With our ZAM-1 Home Control module, you can have a fully integrated security and environment control system. Upon an intrusion, your computer can take the action most appropriate, whether that is to ring an alarm bell, flash all the lights around your home, or dial the police.

*The ZCM-1/ZCM-1V Master Control module is required to use the ZAM-2 Security module.

$179.95



The ZAM-3 is a complete telephone answering and dialing system. It is capable of taking the phone off-hook and dialing a number under computer control or of answering the phone when it rings. With the ZAM-1 Home Control module and the ZAM-2 Security module, the ZAM-3 Phone Dialer module can be integrated into a complete home or business security/monitoring system. Applications include security, auto phone dialing, and computer-answering systems.

*Pulse dialing option is available as ZAM-3P. $199.95

*The ZCM-1/ZCM-1V Master Control module is required to use the ZAM-3/ZAM-3P Phone Dialer module.

Prices are in US dollars.

COMPATIBLE COLOR-I . . .

NEW 2 YEAR WARRANTY!
On all monitor electronics . . . 3 yrs. on all CRT's
(See details at dealer)

The popular choice for popular computers . . . at a popular price.

The Color-I Monitor is designed to perform superbly with your Apple II, Atari or VIC Commodore personal computer and others. Highly styled cabinet. It accepts a composite video signal to produce vivid, richly colored graphic and sharp text displays. Very reasonably priced, the Color-I is a giant step above home TV sets and other monitors.

Just write, or call to receive complete specifications on the Amdek Color-I Monitor.

- Quality 260(H) x 300(V) line resolution.
- Built-in speaker and audio amplifier.
- Front mounted controls for easy adjustment.
- Interface cables available for Atari and VIC Commodore computers.
- FCC/UL approved.
